THE EIGHTY-FOURTH ANNUAL REPORT FOR THE YEAR 1897.

The committee appointed by the Trustees to prepare the Annual Report to the Corporation have the honor to submit the following:—

THE MASSACHUSETTS GENERAL HOSPITAL.

On Feb. 26, 1897, Dr. Herbert S. Howard (formerly Superintendent of the State Alms House at Tewksbury) was elected Resident Physician at the General Hospital, vice Dr. J. W. Pratt, resigned. Dr. Howard entered upon his duties June 1, and the Trustees are favorably impressed with the vigor and good judgment with which he has taken hold of his new work.

During the six months ending Dec. 31, 1897, there was a gain of nearly \$6,000 in the returns from paying patients over the corresponding period of 1896, and this without diminution in the amount of legitimate charitable work.

The deficit charged to the General Fund on account of this Hospital in 1897 amounted to \$19,584.44. The gain in receipts above noted will tend to reduce materially the deficit of 1898, but important and essential repairs may increase the expenses of this year.

The work of the Hospital appears to have been maintained in about the average volume, and with the average good results.

On Jan. 1, 1898, there were 246 patients in the Hospital, as against 233 on Jan. 1, 1897. The number of patients received into the Hospital on account of accident was 823, as against 617 in the previous year. The greatest number of operations for any one disease was 173 for Appendicitis; of these, 23 died, making a mortality of about 13%. There were 95 operations for Hernia (exclusive of strangulated cases) with 2 deaths. It appears, also, that the operation of Hysterectomy was performed 44 times for cancer or fibroid tumor of the uterus, with 4 deaths, showing a mortality of 9%.

The number of out-patients treated was 29,181, as against 29,867; the daily average attendance was 303, as against 299 in 1896.

The Pathological Clinical Laboratory, under the guidance of Dr. James H. Wright, has exceeded in usefulness even the hopes of its projectors. It has added very greatly to the efficiency of the Hospital in the treatment of patients, and has contributed largely to scientific knowledge.

The Library, by the appointment of an Assistant Librarian (who also performs other services), and a new catalogue, has been made more easy of reference, and of greater helpfulness to the Visiting Staff and to all entitled to its use.

The Resident Physician has been granted the assistance of a stenographer and typewriter, and in the present year has been allowed an Assistant Physician. His time will thus be freed, in large measure, of routine and other duties which can be as well done by less highly paid employees. The policy and even the necessity of this step has become manifest to the Trustees, in view of the variety and importance of the duties with which the Resident Physician is charged.

The attention of all interested is again called to the fact that the admission of children, and of infants accompanied by their mothers in proper cases, is not only permitted but encouraged by the Trustees, in the belief that such cases add to the cheerfulness of the Hospital, and of its other inmates.

On March 26, Dr. Henry L. Morse was appointed Aural Surgeon at the General Hospital, in accordance with the recommendation of the Visiting Staff, and, on April 23, Dr. F. E. Cheney was appointed an additional Ophthalmic Surgeon.

On July 2, Mrs. Mary E. Minot was appointed matron at the General Hospital, in the stead of Mrs. Dadmun, resigned.

CONVALESCENT HOME.

On Jan. 1, 1898, there were 29 patients in the Home, as against 21 on Jan. 1, 1897.

The average number treated for the year appears to have been the same as in the previous year, but Dr. Howard has found it possible to so reduce the cost of supplies as to present but a very small deficit, and he is confident that the expenses of 1898 will be brought within the available income.

THE McLEAN HOSPITAL.

The report of the Superintendent, Dr. Cowles, printed elsewhere, will be read by the friends of the institution with much satisfaction as to the work of the past, and with unusual interest in his proposals for the future.

The receipts from paying patients show a marked increase, while the expenses of administration are reduced. The net deficit of \$19,260.96 charged against

the general fund of the Corporation is a net decrease of \$9,180.49 over the previous year, and this notwithstanding a reduction in the income from trust funds of \$1,225 as compared with 1896.

There is further cause for satisfaction in the fact that the income showed an increase in each quarter over the preceding, and in December an increase over any previous month. On the basis of the receipts and expenses for January of this year, Dr. Cowles anticipates that the deficit of 1898 will be small, if any.

The average cost per patient per week was \$27.02, as against \$28.26 in 1896. The apparent cost per patient must always be considered with reference to the added receipts which the superior advantages now offered insure. While it has not and may not reach the low level which obtained at Somerville, the tendency is now in the right direction, and the opinion is expressed by the Superintendent that, at comparatively small cost, the work of the Hospital may be increased without corresponding increase in the expense of administration, and the cost per patient be made to approximate the former level.

The statistics show a marked increase in the amount of work done and improvement in its quality. On Dec. 31, 1897, there were present in the Hospital 152 patients, as against 138 on January 1 of the same year, and 130 on Jan. 1, 1896. The whole number of cases treated was 287, against 262 in 1896; number of admissions, 137 against 127 in the former year; number of recoveries, 42, or 31% of the admissions, against 18.9%. The daily average number of patients was 143, as against 138 in 1896.

On Jan. 21, 1898, there were 7 patients in the Upham House and 5 in the Appleton House, showing

a marked increase in the use of the Hospital by patients able to take advantage of the comforts to be obtained in this part of the Hospital plant.

Nevertheless, during the year 12 persons were treated free of all cost, and 225 patients in return for payments of less than the cost of their maintenance.

By way of comment on the statistics of the year, the Superintendent says: —

“The foregoing summary of the second year in the new Hospital at Waverley shows that its work is being restored to its orderly course after the commotion incident to the removal from Somerville. The normal relation between the numbers admitted (137) and discharged (120), including those recovered (42), and in the movement of the population, has been renewed. The striking fact appears that, on the basis of a daily average of 143 patients present during the year, there was the relatively large number of 137 admissions, and 284 patients treated. A fair comparison of these figures may be made with the corresponding ones in 1894, the last complete calendar year at Somerville. On the basis of a daily average of 175 patients in that year, there were 116 admissions, 40 recoveries among 129 discharges, and 287 persons treated. These are significant indications that there is here a substantial gain in the curative efficiency of the new conditions. While the proportion among all the cases admitted, of those regarded as acute and curable, does not appear to be increasing, there are clear indications that the general results of treatment are better.”

During the year the Hospital lost the valuable services of Dr. Daniel H. Fuller, second assistant physician, after an incumbency of six years. He resigned

in order to become the Superintendent of the Adams Nervine Asylum.

The opening of a new and copious spring of water at Waverley, which the Superintendent has been authorized to develop for the use of the Hospital, and the appropriation for the establishment there of a milk farm, should also be noticed. From each source the Hospital expects to reap an advantage during the present year, both in the cheapness and the purity of the supply. Several other important appropriations have been made, and applied to the completion of the equipment, rendering the Hospital in many respects an establishment better adapted to its uses.

From their own body the Board of Trustees have suffered severe loss. On June 4, the death of the Hon. John Lowell, the Vice-President of the Corporation, was announced by the chairman of the Board of Trustees, who then offered the following minute, which was adopted and recorded: —

“*Minute:* The Hon. John Lowell is and will be gratefully remembered as a Trustee and Vice-President of the Hospital. His ready service, wise counsels, and strong sympathies were of the highest value, and the Trustees are of one mind in appreciating the good that he did, and, though departed, will continue doing, to a service which his judgment approved and his power sustained to the last.”

On October 15, Mr. Arthur Astor Carey handed in his resignation as Trustee, and it was

“*Voted:* That the resignation be accepted, and that the Secretary express to Mr. Carey the regret of the Trustees that he can no longer remain a member of their Board.”

On December 3, Mr. Francis Blake was elected a Trustee.

The Trustees desire to acknowledge with sincere thanks the generous bequests, devises, and gifts shown in the report of the committee on the book of donations, amounting in all to \$139,929.88, and to record their appreciation of the gift, from Dr. Charles G. Weld, of an X-ray apparatus for use at the General Hospital.

The financial condition of the Corporation is fully stated in the Report of the Treasurer hereto appended.

The income from interest-bearing investments of all kinds has been \$114,806.14, as against \$116,007.50 in the year 1896. There has been a constant diminution of income from investments since 1893.

The net deficit at the three institutions under its charge amounts, for the year 1897, to \$42,205.71. In addition, the sum of \$15,346.45 was paid out by way of interest on loans.

Assuming that the income from investments does not descend below the present level, the Trustees enter upon the year 1898 in the happy anticipation of a deficit greatly reduced, both by reason of economies in administration, and of additional income. Receipts from donations to its funds largely in excess of the average annual amounts are anticipated.

Nevertheless, in view of the large existing indebtedness, and of the annual deficits which proclaim the need of an increase in the General Fund, the needs of the Corporation cannot be wholly met from present or prospective resources.

First. The fund of the Pathological Clinical Laboratory at the General Hospital has not reached the amount needed to provide for its running expenses, and should be increased by at least \$25,000.

Second. The reasons for providing a similar fund (large enough to furnish an annual income of \$5,000)

to meet the expenses of the McLean Laboratory, and to allow of scientific inquiry "closely linked with the clinical work," are fully set forth in the Report of the Superintendent, and are approved by the Trustees.

Third. The charitable work of the General Hospital far exceeds that for which it receives pay. The annual subscriptions for Free Beds, in connection with a substantial yearly payment from the General Fund, have made possible this beneficent work. It should be provided for by a larger permanent fund, and the work should be extended. An addition to the Free Bed Fund of \$500,000 would accomplish this result.

Fourth. The Trustees will shortly be called upon to deal with plans for improvements at both Hospitals, which promise economies in administration, together with increased efficiency in the service. Indeed, some considerable expense in this line, especially at the General Hospital, seems to be imperatively demanded. It is to be earnestly hoped that neither the General Fund nor the borrowing capacity of the Corporation will be called upon to meet these needs.

SAMUEL D. WARREN,
GEORGE WIGGLESWORTH,

Committee of the Trustees.

DONATIONS.

The Committee on the Book of Donations reports that the following donations and legacies have been received during the year: —

Donation of William S. Dexter, income for Free Beds	\$3,500.00
Donation of William Whitworth Gannett, income for Free Beds	1,000.00
Part of bequest of Anna S. C. Prince	225.00
Bequest of Mrs. Louisa Palfrey	2,000.00
Donation of Mrs. Susan B. Richards, in memory of her uncle, to be called "The Benjamin Joseph Gilbert Fund," income for Free Beds	5,000.00
Bequest of Mrs. Harriet T. Andrew, income for Free Beds	5,000.00
Bequest of Ann White Vose, income for Free Beds at the Massachusetts General Hospital	8,983.08
Bequest of Ann White Vose, income for inmates of the McLean Hospital who may need it .	8,983.09
Bequest of Mrs. Ellen Flint, of Leicester . . .	28.86
Donation of Miss Ellen F. Mason, income for Free Beds	1,000.00
Part of bequest of Mrs. Mary B. Turner, of Randolph	2,565.50
Final payment under the will of Royal M. Tur- ner (previously received, \$21,079.83). . .	3.75
Part of bequest of \$50,000 of William Hilton, to be called "The William Hilton Fund," income for Free Beds, or as the Trustees of the Hospital may direct	17,500.00

Legacy of Mrs. Cornelia V. R. Thayer, income for Free Beds	\$25,000.00
Donation of E. B. Bush to "Free Bed Fund" .	50.00
Donation of Mrs. B. P. Cheney, to be called "The Charles Paine Cheney Fund," income for Free Beds	5,000.00
Legacy of John Foster, to be called "The John Foster Fund," income to be expended as the Trustees of the Hospital shall direct . . .	5,000.00
Donation of Rev. J. W. Quimby	50.00
Bequest of William L. Chase, of a fund, to be called "The Charles B. Porter Fund," in- come for Free Beds	5,000.00
And interest on that fund from the executors of the will of William L. Chase	370.00

That there have been received in donations for the
Pathological Laboratory:—

From Henry M. Whitney	\$1,000.00
Heirs of Samuel Parkman	2,000 00
Lawrence Minot	100.00
Mrs. Henry S. Grew	500.00
William Minot	100.00
George Wigglesworth	100.00
Augustus Hemenway	1,000.00
Miss A. P. Cary	500.00
Allen Danforth	100.00
And from the Staff of the Hospital to guarantee income of the Pathological Laboratory . .	1,070.60
That there have been received from Mr. Charles P. Curtis, Treasurer of the Boston Training School for Nurses	17,500.00
And through Mr. Charles P. Curtis, Treasurer, legacy of John Foster, income to be ex- pended in training of nurses	5,000.00

That there have been received in subscriptions for Free Beds, as shown in the Treasurer's Annual Report	
	\$12,700.00
	<hr/>
	\$137,929.88

And that these sums have been entered in the Book
of Donations in the usual form.

CHARLES V. BEMIS,

Committee on the Book of Donations.

MASSACHUSETTS GENERAL HOSPITAL,
Dec. 31, 1897.

REPORT OF THE TREASURER.

In accordance with the Fifth Article of the By-Laws, the annual report of the accounts of the Massachusetts General Hospital, made up to the last day of December, 1897, is respectfully submitted to be laid before the Corporation at its annual meeting.

Dr. FRANKLIN HAVEN, Treasurer, in account with the MASSACHUSETTS GENERAL HOSPITAL. Cr.

* NOTE. Weeks of paying patients in 1894 = 1,924.
1895 = 3,585.
1896 = 4,576.
1897 = 4,711.

Examination of Accounts.

BOSTON, Feb. 4, 1898.

*To the Committee on Accounts,**Massachusetts General Hospital: —*

I hereby certify that I have examined the vouchers, as per voucher books, of the Convalescent Home, McLean and General Hospitals, for the year ending Dec. 31, 1897, and I found the same correct, and the amounts properly entered in the cash books.

I have examined the books of the Treasurer for the year ending Dec. 31, 1897, as follows, viz., the cash book, journalizings, and the trial balance, and I found the same correct. I found vouchers for the cash payments, and I found cash in the banks as per amount called for by the Treasurer's cash book.

The balances on the Treasurer's books agree with the balances on the books at the McLean and General Hospitals.

I found bonds and stock certificates as per bond and stock accounts on the Trial Balance herewith, and notes as per Notes Receivable account.

WALDO L. ABBOTT,

Auditor of Accounts.

THE ANNUAL REPORT OF THE RESIDENT PHYSICIAN OF THE MASSACHUSETTS GENERAL HOSPITAL

FOR THE YEAR 1897 IS RESPECTFULLY SUBMITTED.

The average number of patients in the hospital during the year was 235.

Of paying patients, 1 paid \$50.00; 68 paid \$35.00; 1 paid \$28.00; 144 paid \$21.00; 2 paid \$20.00; 1 paid \$23.35; 17 paid \$15.00; 36 paid \$14.00; 460 paid \$10.50; 51 paid \$10.00; 317 paid \$6.00; 6 paid \$6.00; 9 paid \$5.25; 71 paid \$5.00; 8 paid \$4.00; 3 paid \$3.50; 18 paid \$3.00; 1 paid \$2.45; 6 paid \$2.00.

Whole number of patients treated during the year, paying, 1,220; paying part of the time, 112; free, 2,980; total, 4,312.

Proportions of deaths to whole number of results, 8.37 per cent.

There were 3,215 patients treated in the accident room. Of this number 823 were retained in the hospital.

The greatest number of patients at one time was 263.

The least number of patients at one time was 212.

Total number of days for paying patients, 32,580; free, 52,195; total, 85,775.

Average time paying and free patients, 19 days.

In comparing the expense of this hospital with others of about the same size, one should bear in mind the large number of operations done here (see Table of Operations); the large number of these operations that are laparotomies; that this table does not

include the minor operations done in the out-patient department and in the accident room. The amount spent in ether during the year (\$1,944.05) will give some idea of this work.

Also the pavilion system, although much more attractive and more homelike for the patients, is more expensive to maintain than the solid block system of hospital.

The X Ray apparatus presented last year by a constant friend of the hospital, although somewhat expensive to maintain, has proven a most valuable aid to accurate diagnosis.

The laboratory is showing itself increasingly useful to every department of medical work in the hospital.

Among the minor improvements of the year may be mentioned the putting of screens on the hospital.

A new cabinet has been purchased for the card catalogue of the hospital cases. The old one will be used for the card catalogue of the Treadwell Library, the work on which has been begun.

Blinds have been put on the west windows of the Gardner ward, to the great comfort of the patients during the summer time.

The walls of the Bradlee Theater, and the etherizing and anterooms connected with the same, have been enameled.

The usual form of tables and statistics follow in their regular order.

Very respectfully yours,

HERBERT B. HOWARD,

Resident Physician.

MASSACHUSETTS GENERAL HOSPITAL TRAINING SCHOOL FOR NURSES.

The Massachusetts General Hospital Training School for Nurses has made arrangements for giving a two years' training to women desirous of becoming professional nurses.

Persons wishing to receive this course of instruction must apply to the Superintendent of the Massachusetts General Hospital Training School for Nurses, Blossom Street, Boston, Mass.

The most desirable age for candidates is from twenty-five to thirty-five years. They must be in good health, and must refer to some responsible person as to their moral character. After approval by the Superintendent of the School and the Resident Physician of the Hospital, they are received for one month on probation. During this month they are boarded and lodged at the Hospital, but receive no compensation.

They are under the authority of the Resident Physician and the Superintendent, and are subject to the Rules of the School and of the Hospital. Their fitness for the work, and the propriety of retaining or dismissing them at the end of the month of trial, are determined by the Resident Physician and the Superintendent and Directors of the School; and the same authorities can also discharge them at any time during their connection with the School, in case of misconduct or inefficiency. They reside in the Hospital, and serve as assistant nurses in the wards. When on service, they are required to wear the Hospital uniform.

Training.

Those fulfilling the conditions of the probationary month are accepted as pupils. They must sign a written agreement to remain at the School for two years (including the probationary month) and to conform to its rules.

The instruction includes : —

1. The dressing of burns, sores, and wounds ; the preparation and application of fomentations, poultices, cups, leeches, and of minor dressings.
2. The administration of enemata, the use of the catheter, and the giving of baths.

3. The principles of massage, with practical workings.
4. The care of the patient's room; the making of beds; the principles of ventilation, and their practical application.
5. The management and care of helpless patients; the prevention and treatment of bed sores.
6. The manufacture of bandages; the application of bandages and splints.
7. Emergencies and their treatment.
8. The preparation, cooking, and serving of food; the use of stimulants.

They are also taught how to observe accurately the secretions, expectorations, pulse, skin, appetite, temperature, sleep, eruptions, and the effect of diet, stimulants, and medicine. They are also instructed with regard to the management of convalescents. The instruction is given mainly by the Superintendent and by the Head Nurses. Lectures, recitations, and demonstrations, by members of the Hospital Staff, also take place at stated periods.

Examinations, conducted by a Board of Medical Examiners, are held quarterly.

The pupils are employed as assistant nurses in the wards of the Hospital, and receive ten dollars (\$10) a month (after the probationary month) during the first year, and fourteen dollars (\$14) a month during the second year, for their personal expenses. The education during this time is considered a full equivalent for their services. During both years of the course they board and lodge at the Hospital. Their washing is also done at the expense of the Hospital. Pupils are required to come prepared to pay for their uniform at the close of the probationary month. The expense of the uniform will not exceed twelve dollars.

When the full term of two years is satisfactorily completed, a diploma is given certifying to their period of training, their proficiency, and moral character. The Training School provides a badge, to which graduates are entitled on the payment of seven dollars.

The Directors reserve the right to terminate the connection of a pupil with the School for any reason which they may deem sufficient.

A graduate of this School, who desires to acquire a special proficiency in the care of cases of nervous and mental diseases, has the privilege, under certain restrictions, of entering the McLean Hospital Training School for Nurses. Such graduates

will, after one year's satisfactory study, receive the diploma from that School, in addition to the one received from the Massachusetts General Hospital Training School.

Massachusetts General Hospital Training School for Nurses, April, 1897.

Statistics for the year 1897 : —

Number of Applications	882
Number Admitted	34
Number Graduated	27
Total of Graduates	458

LIST OF LECTURERS AND SUBJECTS.

FOR THE YEAR-1897-98.

Lectures to be given Thursdays at 4 P. M.

- | | |
|--|-------------------------|
| DR. A. K. STONE. | September 16, 23. |
| The physiology of digestion. The preparation and methods of serving the various foods, including the use of nutritive enemata. | |
| DR. H. B. HOWARD. | September 30. |
| General remarks to the nurses. | |
| DR. FREDERICK C. COBB. | October 7, 14. |
| Care of the sick-room. (Ventilation, temperature, furnishing, arrangement. Use of disinfectants and deodorizers, with special reference to the care of contagious diseases.) | |
| Special nursing in diseases of children. | |
| DR. JAMES M. JACKSON. | October 21. |
| Gynæcology. | |
| DR. JAMES C. WHITE. | October 28, November 4. |
| The anatomy and care of the skin. | |
| DR. JAMES H. WRIGHT. | November 11, 18. |
| Care of the dead. Autopsies. | |
| DR. J. J. MINOT. | November 25. |
| General medical nursing, including the use of leeches, blisters, cuppings, enemata, and baths. | |
| DR. JAMES M. JACKSON. | December 2, 9. |
| The preparations of medicines, their doses, and methods of administration. Poison emergencies. | |

- DR. W. M. CONANT. December 16, 23.
Applied anatomy.
- DR. W. A. BROOKS. December 30, January 6.
Account of the circulation, the pulse, respiration and temperature, secretions and excretions. Examination of the urine.
- DR. CHARLES L. SCUDDER. January 13, 20, 27, February 3.
Wounds, methods of repair in wounds, inflammation, surgical fevers, the principles of antiseptic and aseptic surgery, preparations to be made for a surgical operation in private nursing.
Special nursing in cases of tracheotomy, intubation of the larynx, and abdominal surgery.
- DR. CHARLES W. TOWNSEND. February 10, 17.
Special nursing in obstetric cases.
- DR. HERMAN F. VICKERY. February 24, March 3.
Special nursing in diseases of the thoracic and abdominal organs.
- DR. MAURICE H. RICHARDSON. March 10, 17, 24.
The administration of anæsthetics. Care of patients before, during, and after operations, with possible emergencies (shock, hæmorrhage, and collapse).
- DR. J. J. MINOT. March 31.
Special nursing in cases of fever.
- DR. J. J. PUTNAM. April 7, 14.
Special nursing in diseases of the nervous system. Massage. Chorea. Convulsions. Epilepsy.
- DR. H. C. BALDWIN. April 21, 28.
Special nursing in mental diseases and for the insane.
- DR. H. C. ERNST. May 5, 12.
Bacteriology.
- DR. F. E. CHENEY. May 19.
Special nursing in diseases of the eye.
- DR. C. A. PORTER. May 26, June 2.
Surgical dressings. Fractures and the applications of splints.

Rules for Admission, etc.

Application for admission of patients should be made at the Hospital on Blossom Street, Boston, on week days between the hours of 9 and 11 A. M. and 2 and 3 P. M.

Recent accidents admitted at all hours.

Out-patients received between the hours of 9 and 10 A. M. week days only. Out-patient service is for the poor only.

Applications from a distance should be made in writing, accompanied by a full description of the case by the attending physician, with reason of the physician for thinking hospital treatment desirable, and when a free bed is needed, by a statement of the pecuniary condition of the patient. Always wait for a reply before sending the patient.

Contagious and chronic diseases are not admitted.

Regular charges to paying patients are as follows: in the Jackson Ward (private), \$35 per week; in small room in the Townsend and Bigelow Wards, \$21.00 per week; in the General Wards, \$10.50 per week. These rates, covering only expenses of board and lodging, may be increased or abated in individual cases by the Resident Physician.

An ambulance, accompanied by a medical officer, will be dispatched to any point within the city proper for the conveyance of cases of accident or urgent sudden sickness, not contagious, to this Hospital, or elsewhere, upon notice from a physician, the police, or other responsible source, subject to the approval of the undersigned.

In cases requiring gratuitous treatment no charge will be made.

HERBERT B. HOWARD,

Resident Physician.

DALTON SCHOLARSHIP.

The income of this fund, amounting to \$500 annually, is devoted to investigation in the science of medicine. The rules of the Trustees applicable to it are as follows:—

ARTICLE 1. Candidates shall be nominated to the Board of Trustees by the General Hospital Staff, with recommendations for the information of the Board. They shall be either Internes of the General Hospital or graduates of a regular American college.

ARTICLE 2. The nature of the work in medical investigation proposed to be prosecuted by each candidate shall be designated.

ARTICLE 3. Scholars shall be appointed by the Board from among the candidates named.

ARTICLE 4. Scholars shall be under the supervision of the Staff, and the Staff shall, whenever it thinks desirable, report to the Board any dissatisfaction it may feel as to the work or methods of scholars, and the Board may act in the premises as in the case of Internes.

ARTICLE 5. Scholars are required to do an amount of work equivalent to not less than ten hours per week from the last Wednesday in September to the last Wednesday in June and to present to the Trustees at the end of the year, a report on the amount and result of the work performed. The results of work of scholars shall appertain to the Hospital, and when made public, the name of the scholar shall accompany the publication; but no publication shall be made unless recommended by the Staff and approved by the Board.

ARTICLE 6. Should the work of a scholar extend through a part of a year only, he shall be entitled to a proportionate share of income.

ARTICLE 7. When the income is insufficient, appointments for the year may be omitted.

ARTICLE 8. Any income not used shall be cumulative and not added to the principal.

ARTICLE 9. Scholars shall be eligible for renomination and reappointment.

ARTICLE 10. Candidates for scholarship should make written application to the Resident Physician of the Massachusetts General Hospital between May 15 and June 15 and the scholarship shall be held for one year from September 15 following.

Further information may be had by applying to the Resident Physician of the Massachusetts General Hospital.

ANNUAL REPORT (EIGHTIETH)

OF THE

SUPERINTENDENT OF THE MCLEAN HOSPITAL.

THE following report, with tabular statements relating to the number and condition of the patients treated in the hospital during the year 1897, is respectfully presented:—

TABLE No. 1.
GENERAL STATISTICS OF THE YEAR.

	Males.	Females.	Total.
Patients in the hospital Jan. 1, 1897	77	73	150
Admissions within the year	59	78	137
Whole number of <i>cases</i> within the year	136	151	287
Discharged within the year	57	63	120
Namely,—as Recovered	16	26	42
Much improved	7	8	15
Improved	13	11	24
Unimproved	11	8	19
Not insane	3	4	7
Deaths	7	6	13
Patients remaining Dec. 31, 1897, } supported as private patients }	79	88	167
Number of different <i>persons</i> within the year	135	149	284
" " " " admitted	58	77	135
" " " " recovered	16	26	42
Daily average number of patients	72.42	70.89	143.31

During the year one man and one woman were twice admitted, and one woman was discharged and re-admitted. Thus the 287 cases treated represented 284 persons.

Of the 135 persons admitted during the year, 83 were regarded as recent cases, and 52 as chronic, or incurable.

HOPE COTTAGE.

VIEW FROM ADMINISTRATION HOUSE.

UPHAM HOUSE.

There were 96 persons, 46 men and 50 women, who had never been in any hospital. Of the remaining 39 persons, 27, 6 men and 21 women, were admitted for the second time; 7, 4 men and 3 women, for the third time; 3 women for the fourth time; 1 man for the sixth time; and 1 man for the thirty-fifth time.

In 1897 there were 10 more admissions, 8 more discharges, and 25 more cases under treatment than during the year 1896, and the number present was 17 more at the end than at the beginning of the year.

Of the 120 persons discharged, including deaths, 12, 9 men and 3 women, were transferred or committed to other hospitals in this State, and 2 men and 1 woman to hospitals in other States.

Of the 42 persons discharged recovered, 27 had never before been inmates of any hospital; and of the remaining 15 persons, 9 had been in this hospital, 2 in the Newton Nervine, 1 in Woodbourne, 1 in the Boston Lunatic Hospital, 1 in the Worcester Lunatic Hospital, and 1 in a Nova Scotia asylum. These 15 persons had previously made 18 recoveries.

The average duration of illness from the beginning of attack in all cases recovered was 8.21 months, and the average duration of their residence in the hospital was 5.52 months.

The percentage of recoveries on all admissions, for the year 1897, was 30.6.

The voluntary cases admitted during the year numbered 63, 29 men and 34 women. Of these, 37 were cases of melancholia, 3 of mania, 3 of confusional insanity, 6 of general paralysis, 2 of alcoholic insanity, 3 of primary dementia, 3 of senile dementia, 1 of *folie du doute*, 1 of cerebral tumor, and 4 not insane.

The 63 voluntary cases admitted during the year, with 31 such cases remaining from previous years, furnished 11 recoveries. The voluntary patients have yielded 17.46 per cent. of recoveries on the admissions of that class for 1897, thus furnishing less than their due proportion of all the recoveries. Of this class, 5 other cases were discharged much improved, 8 improved, 7 not improved, 3 dead, 6 not insane, and 9 were committed. The total remaining under the voluntary relation at the end of the year is 45 persons, 18 men and 27 women.

The number of persons admitted as voluntary patients under the present law is as follows: namely, 1881, 1; 1882, 11; 1883, 33; 1884, 49; 1885, 34; 1886, 29; 1887, 29; 1888, 34; 1889, 41; 1890, 58; 1891, 40; 1892, 52; 1893, 46; 1894, 40; 1895, 39; 1896, 48; 1897, 61;—a total of 645 persons in 16 years.

The voluntary cases were eleven less than one half of all admissions. Eight of these were regularly committed after admission to the hospital,—5 because the hospital authorities did not regard them as proper cases to remain on the voluntary basis, and 3 because of their demand for discharge. A large proportion of the voluntary patients were, as usual, cases of melancholia,—37 out of the 63 admissions.

The foregoing summary of the second year in the new hospital at Waverley shows that its work is being restored to its orderly course after the commotion incident to the removal from Somerville. The normal relation between the numbers admitted (137) and discharged (120) including those recovered (42), and in the movement of the population, has been renewed. The striking fact appears that, on the basis of a daily average of 143 patients present

PROCTOR HOUSE. MEN'S BELKNAP. ADMINISTRATION. WOMEN'S BELKNAP

VIEW LOOKING WEST.

APPLETON HOUSE.

during the year, there was the relatively large number of 137 admissions, and 284 persons treated. A fair comparison of these figures may be made with the corresponding ones of 1894, the last complete calendar year at Somerville. On the basis of a daily average of 175 patients in that year, there were 116 admissions, 40 recoveries among 129 discharges, and 287 persons treated. These are significant indications that there is here a substantial gain in the curative efficiency of the new conditions. While the proportion among all the cases admitted, of those regarded as acute and curable, does not appear to be increasing, there are clear indications that the general results of treatment are better. There is also a tendency to seek the admission of patients for observation and first care, even in cases quite obviously incurable, that afterwards go to the State hospitals. It is considered also a part of the legitimate work of this hospital to receive cases of active senile insanity, and those that otherwise are so difficult to manage in their homes; the relief that can be given in such cases by skilful care is truly remedial.

The completion of the first two years in the process of establishing the hospital under its new conditions brings it to a position of great interest and importance. Its two chief problems, financial and medical, are being worked out. While the business of the hospital is now in a very satisfactory condition, this fact will not appear from the report of the year 1897 as a whole without some explanation. The average cost per patient was \$27.02 per week as against \$28.26 in 1896, and appears to indicate a considerable increase of cost over that at Somerville. But the work at Waverley has been done, so far, under conditions in which the normal expense of running

the new hospital is not correctly represented by the average weekly cost *per capita*, and the excess of expenditure over the income. Considerable items of expense were due to the unfinished condition of the buildings and of their accessories and appliances in a multitude of particulars of construction; the amount of these items is diminishing. The daily average number of patients has gradually increased during the two years and is now approaching 160, which is the full capacity of the hospital; it was 175 to 180 at Somerville, and allowance should be made for this difference in comparing the former average cost with that at Waverley. But with the present number in the hospital the rate of income has already increased to an amount that makes it reasonable to expect at least only a small deficit for the year 1898. This result has been aided by the improvement in the economies of management, natural to the circumstances, and there is more to be gained in this direction. There will be a material saving as well as improvement in the large item of the milk supply; the arrangements are nearly completed for producing it here, the land bought for the purpose and the new barn being nearly ready for use. The development of the spring upon this land will soon afford the hospital its own water supply at a considerable saving of cost and gain in quality.

While the conditions at Waverley, so far, have been as here described, still there has been no change in the practice of aiding those who can pay only in part, and in some cases nothing, for the cost of their care. There has been applied in this way, not only the income from the comparatively limited beneficiary funds devoted to this hospital, but a large proportion of the patients have been cared for at rates

LIBRARY AND TRUSTEES' ROOM.

LIBRARY FOR PATIENTS—ADMINISTRATION HOUSE.

UNIVERSITY OF
SOUTH ALABAMA
LIBRARY

much less than the average cost. When the time comes for increasing the accommodations of the McLean Hospital, by making additions as they become necessary, each of these may be made at a comparatively small cost without a corresponding increase in the expense of administration. Thus the *pro rata* cost will be diminished with each of such additions until the natural capacity of the hospital is attained. More work will be accomplished, and more charity can be bestowed; and even with the improvement in quality which is assured by the superior advantages now afforded, the average cost may be made to approximate the former level at Somerville.

The medical problem of the hospital presents some special considerations. A review of its history for the last fifteen years at Somerville shows a remarkable change in the character of its work. The movement of its population became more active, — more patients were admitted and discharged, and a larger number were under treatment each year; the recovery rate was good. The considerable increase in the annual earnings was chiefly spent in enlarging the nursing staff and other personal service and improving its quality, whereby the better results were gained. It was the better service that commanded the better patronage, even under the adverse conditions at Somerville. Still a large amount of charitable service to the sick was rendered, although, during the period in question, the annual income from beneficiary funds was only increased from about \$9,000 to \$13,000. The hospital was supported wholly from this fund, and its own earnings from board of patients. It was on this basis, with respect to the financial question, that it was attempted to make progress along strictly medical lines, including,

besides the clinical work, special attention to laboratory research. The problems of building the new hospital interfered somewhat, in the last years at Somerville, with this movement, but it was pushed forward at a material addition to the annual cost as it appeared in the running expenses.

These being the data of the situation, and it being demonstrated that as much clinical work is being done in the new hospital on the basis of a daily average of 144 patients, as with that of 175 in the old hospital, and with the reasonable expectation of attaining a moderate rate of cost notwithstanding all the betterments of the service that have been gained, it seems fair to claim that the carefully projected plan for the advancement of the medical work should be carried out with as little delay as possible. The precise conclusion to which these remarks are intended to lead is that there is here the opportunity for scientific inquiry which, though closely linked with the clinical work, is still somewhat extraneous to the usual running expenses of the hospital as heretofore constituted. The rooms, appliances, and other requisite conditions are amply provided for pursuing certain lines of investigation to the end of gaining some of the long-sought knowledge of mental diseases that may contribute to their prevention and cure. A single investigator in anatomical pathology cannot carry on all the branches of the complex inquiry. An expert in physiological and pathological chemistry is one of the essential members of the laboratory personnel. There should be special investigations in connection with the clinical work into the physiology of nutrition, of fatigue and rest, of certain therapeutic measures, such as physical exercise, bathing, etc.; and like methods to those

SERIALS
SECTION

employed in experimental psychology may be applied to the study of normal and abnormal nervous and mental reactions. These researches require long and persistent study in individual cases, to determine any conclusive laws in the matter. Such studies can only be carried on by those whose special business it is, and it is not possible for the physicians engaged in the clinical service to pursue them effectively, though these would be of the greatest help if maintained collaterally with the clinical work. The inquiry is pertinent: Why should not a hospital like this be the seat of an endowed department for research in the pathology and therapeutics of its special work as well as a general hospital? Will not the opportunity be taken to inaugurate a more comprehensive and adequate method of dealing with these saddest of human ills? This position was taken here ten years ago, as to the need of acting upon the broader conception of this subject. There might be an endowment fund, to yield as much as \$5,000 annually, to be used independently of the running expenses of the hospital, and devoted to compensation for especially trained professional service, the provision of apparatus, etc. Such a fund, if granted now, would relieve the general expense account of an unusual charge and remove the present embarrassment that is retarding this special work. Instead of letting it languish upon the threshold of performance for which promising preparations have been made through some years of efforts to formulate its problems, this appeal is made to let us include now this very vital element in the new organization of the hospital service, in order to give it the completeness and effectiveness that is fitting for the great opportunity.

There were several changes in the Medical Staff during the year; Dr. Daniel H. Fuller resigned the position of second assistant physician September 1, after having held that office six years, and having previously served here as house pupil for two years. He went to take charge of the Adams Nervine Asylum, as its Superintendent, and has carried with him the cordial good wishes and confidence of all his former associates in this institution. His place was filled by the promotion of Dr. E. Stanley Abbot, formerly the third assistant physician. The system of appointing undergraduate house pupils was discontinued in July, and that of having two junior assistant physicians was adopted.

The first appointments were of Dr. Charles S. Little and Dr. Edwin Leonard, Jr.; the former not having fully recovered from an illness, resigned, and Dr. George E. Emery was appointed in his place, having previously served here a year as house pupil. Mr. William Skarstrom resigned his position in September, after three years' service as instructor in physical training, to enter upon similar duties, and as a teacher, in Groton Academy. His record here is one of enthusiastic interest in his work, and intelligent application of its principles to the needs of our patients; he is remembered with a high appreciation of his usefulness and personal worth.

The absence of Dr. Hoch from March to September gave him opportunity for pathological study in Heidelberg, and this gained an important contribution to the work of the laboratory department, of which he has charge. While this work is being carried on the special clinical studies referred to in former reports have been continued with increasing interest and value.

ENTRANCE HALL AND CONSERVATORY.

WOMEN'S GYMNASIUM — PARLOR.

ROUTE 10 LINDSEY
2011

Good progress has been made in the development of the methods of physical training in adapting it to the special requirements of our patients. With this are included, under charge of the instructors, all available means of engaging the patients in some form of occupation or recreation involving physical exercise. The detailed report of the instructor for the men shows three general ways in which this is accomplished. The work is: (1) individual, including massage, or medical gymnastics at the hands of the instructor or nurses supervised by him; (2) in classes whose members meet regularly for exercise in gymnastics, or for work in wood-carving class, etc.; (3) in games, sports, and light labor according to the season (as in lawn mowing and sprinkling, some forms of garden work, shoveling snow, etc.). Patients may work alone or in small groups. This includes also bowling, billiards, base-ball, basket-ball, volley-ball, tennis, croquet, quoits, and golf. The latter was a very popular game during the whole season and proved to be a valuable addition to our resources. Besides the practice of exercises in running, jumping, vaulting, etc., an outdoor gymnasium was constituted by furnishing a small amount of appropriate apparatus in the gardens. The facilities for indoor recreation and work were much increased in the progress toward completion of fitting up the gymnasium building, which is to be finished during the coming year. Mr. Skarstrom's report for the first eight months of the past year shows the total number of patients reached in the classes for gymnastics and wood carving, and in games, sports, and labor, was 51; there was an average of over 51 days' work for each patient, and an aggregate of 2,637 days' work for all. At all times a number of patients were on

parole, and in addition to the special forms of exercise already alluded to, other patients also enjoyed many walking excursions, singly and in small companies, in the surrounding country.

Like methods were pursued by Miss Hurlbutt, the instructor in gymnastics, in the use of the gymnasium for women, in the gardens of the houses they occupy, and with the means provided for recreation and occupation. The work in this department has been a continuation of that of the previous year, with a gradual gain in both quantity and quality because of the increasing facilities afforded. The work includes the application of massage, medical gymnastics, and a progressive development of daily exercises for individuals or small classes in the gymnasium, to which the patients are taken for treatment as much as possible. In the class exercises, such games as volley-ball and basket-ball, etc., were introduced in the intervals of the lessons, to increase the interest by avoiding the monotony of a too continuous drill. Thus is relieved the irksomeness that the patients themselves sometimes increase by a tendency to resort too constantly to their rooms. Great good was gained from the attractiveness of the surroundings here,—in driving, walking, and in outdoor games. These included croquet, tennis, volley-ball, and golf. Of the latter the instructor reports that, “while each game had a share of patronage, none met with the favor that golf did; about fifteen of the women patients used the links during the summer and fall. Most of these joined in the regular Saturday afternoon games played during the golf season by both men and women patients together with officers and nurses. The game is proving most useful for our work and is much enjoyed.” It was common, on every pleasant day, to

STUDIO AND ART ROOM.

WOMEN'S GYMNASIUM — PARLOR.

see the players, singly or in small groups, practising for the Saturday's games. A special attraction of this gymnasium is its studio, or art room, and the class in drawing, for which a teacher comes regularly two afternoons in each week. The gymnasium building has been made very attractive through the interest taken in it by some of the patients' friends. A number of paintings and fine photographs loaned by them have adorned the principal rooms, including especially the art room, during the greater part of the year; and contributions of money and pictures have been given for the beginning of a permanent collection, upon the thoughtful suggestion of a lady who has undertaken it. Besides the rooms already mentioned, this building contains a billiard room and workroom, and the large room for the gymnasium proper is soon to be fitted up with a complete equipment of appropriate apparatus. With the adornment of plants in its conservatory, and cheerful wood fires on the hearths, this house is a most attractive part of the means now available for the comfort and cure of our sick people; and it is becoming a delightful resort in the days of convalescence, when even a little of the variety of normal life means so much.

The gymnasium for men has also been especially attractive and useful. Not only has the large room for gymnastic exercises, though yet unfinished, been in daily use, but the work of the class in wood carving has been regularly carried on in the shop, which has received occasional additions to its equipment, including, besides the ordinary carpenter's tools, a lathe for wood turning and a scroll-saw. The reading room, smoking room, and two billiard rooms are spacious and comfortable; the place has become a common resort and is susceptible of being made still

more inviting. The original plans for the further remedial uses of these buildings, both for men and women, are still in train for as early completion as practicable.

The Amusement Hall maintains its usefulness for its several purposes. Sunday services are held there regularly by our Chaplain, Rev. Mr. Prescott. Every week, with rare exceptions, from October to May, the facilities of the hall are in requisition for some kind of entertainment. Excellent concerts, or a lecture, alternate with dancing parties, in which all the ladies and gentlemen of the household take part who are able to join in such occasions.

In the report of the Training School for Nurses, which is appended to this report, reference is made to the instruction of nurses in gymnastics, as a part of their training to enable them to apply massage and physical exercise in the treatment of patients. They are also instructed in cookery, in a special kitchen devoted to the use of the school, and in the general principles of the art, in cooking for the sick, and the serving of the food. The report includes, also, the prospectus stating the course of instruction and directions for applying for admission to the school.

The instructor in cookery, Miss Bradt, who has supervision of the work in all the patients' dining rooms and the kitchens in the houses they occupy, is regularly engaged, also, in connection with the supply department, in studies for the improvement of the dietary, in making up the bills of fare, which are rearranged every week to suit the changes of the seasons, and in inspecting the service, to ensure the economical use of materials and the prevention of their waste.

In this second year of the work at Waverley satisfactory progress has been made in all the particulars of hospital management. The business of each department, under the careful supervision of those in charge, shows the gain in orderliness and ease of work that comes from faithful attention and practice. While much remains to be accomplished in many directions, the ends in view are becoming clearer, and with the gradual relief of the frictions in the executive mechanism incident to its newness, the harmony of the service is being attained that is essential to the best results. It is just to say that while the institution is now in the midst of a stage of active evolution of its more perfect organization, there could hardly be any more encouraging conditions than those which so far have been created here through the generous aid that has been given. These conditions are in the highest degree promising for the accomplishment of that which is the aim of the hospital through its reliance upon sources that have never failed in its support.

Very respectfully,

EDWARD COWLES,

Medical Superintendent.

FIFTEENTH ANNUAL REPORT

OF THE

MCLEAN HOSPITAL TRAINING SCHOOL FOR NURSES.

THE Training School for Nurses, with the completion of the sixteen years of its existence, has a roll of graduates including 295 names,—199 women and 96 men. In the following summary it is shown how many remain in the work of nursing, and into what positions in life others have gone.

	<i>Men.</i>	<i>Women.</i>
Number of graduates in thirteen years	96	199
Graduates remaining in the service as nurses	13	16
Graduates remaining in the service as officers	1	6
Pupils in Massachusetts General Hospital Training School		6
Previously graduated at Massachusetts General Hospital		
Training School		48
Superintendents of Hospitals		2
Superintendents of nurses, other hospitals	2	7
Employed in other institutions	9	11
Engaged in private nursing	26	86
Medical students	17	1
Physicians	5	
Dental student	1	
Dentists	2	
Clergyman	1	
Students	5	
In other business	9	2
At home	13	12
Married and left the profession		44
Deceased	2	6
Pupils now in this school	37	35

This table shows that of the 295 graduates of the school in sixteen years, more than one half of the men still continue the work either in hospitals or in

private nursing, besides 22 who are either physicians or students of medicine. More than two thirds, or 134, of the women continue their professional work; 22 of them are in this Hospital and 26 in other institutions. Fifteen hold official positions connected with training schools. The 59 women who have married or returned to their homes, or made other changes of occupation, will have their usefulness increased because of their experiences and training here. Those who do not continue professionally in the work of nursing by no means cease to exert an influence in the promotion of one of its worthiest objects; the public duty of the hospitals is not alone the care of the sick insane within them. By the careful instruction of its nurses every such hospital contributes its share toward the better understanding, outside of it, of the nature of insanity as being often an illness due to recognizable causes. Such knowledge should lead to earlier preventative measures and lend great aid to the other influences now being exerted to overcome the still prevailing prejudice against the rational recognition and treatment of mental disorders.

The nursing service of the Hospital is sharing in the changes and benefits that have attended the removal from Somerville to Waverley two years ago. While it has been necessary to give first attention to the completion of the various buildings of the new Hospital in many particulars of construction and the perfection of appliances as they immediately affect the welfare of the patients, it has been possible to make the conditions much more comfortable for the nurses. More attention can now be given to completing what was intended, in this regard, in the planning of the new accommodations here.

The state of the service at the end of 1897 can be fairly compared with what it was five years ago at Somerville. The number of patients is now about 25 less than it was then, the capacity of the Hospital being smaller by about that number of beds. The present arrangements of the houses for patients, when the full number of about 160 are present, will require 4 to 6 more women nurses than before; the increase of men nurses has been much greater. More of the nurses remain in the Hospital after graduating; the men have increased from 5 to 13, and the women from 8 to 16. The number of applicants on the waiting lists have increased so much that, although the requirements are higher, those accepted must wait often a year before there are vacancies for them. It is interesting to note that candidates for the training school are applying from more distant parts of the country than before, especially from the Middle and Southern States; and more frequent inquiry is made for a post-graduate course from general hospital nurses,—but at present only a limited number of these can be admitted to the course of the senior class in addition to those entitled to the privilege from the Massachusetts General Hospital.

The organization of the school in 1882 was only nine years later than the first training schools for nurses were established in general hospitals in this country. The development of such schools in hospitals for the insane has been as rapid as it was in the general hospitals. The growing interest on the part of those who seek instruction in the schools for nursing the insane is tending, as was predicted, to the supply of a more capable and better educated class of persons for the work. There is the wholesome tendency, also, to a higher standard of teaching

and requirements in these schools. The general hospitals have reached a stage of evolution in which there is a general movement to increase the course of study from two to three years. This question already demands consideration in the hospitals for the insane. This is most significant of the immense importance of this movement of nursing reform for the insane; while the gain in the means and methods for their treatment and care is really beyond estimation, its great value is only beginning to be appreciated.

It has been reiterated, almost every year, in these reports that the fundamental principle upon which depends the success of these schools in hospitals for the insane is the teaching primarily of general nursing, with the care of mental cases being treated as its application to a special branch of the general art. In the large hospitals for the insane, with the tendency to the establishment of "hospital" wards, there is ample material for teaching effectively the manipulations of general nursing. The fact that this plan of instruction is prevailing in our American schools is laying a sound foundation for their future work. This plan is the only one that can give the nurse the professional standing that is an index of value by which the training maintains its attraction to new pupils. The life and future success of this reform for the sick insane depend upon the improvement of the quality of their nursing care. The disposition that seems to exist in some quarters, on the part of the general hospital schools, to disparage the work of their colleagues in a common cause will be best disarmed by equal progress in our work.

The possibilities that are now clearly indicated for high attainments in this professional field for competent women should be an inducement to enter it, and

to seek in it the accomplishment of purposes that bring honor and worthy rewards.

Information is given in the following pages to those who wish to become applicants for admission to the school; its work is described by a statement of the course of instruction, the general order of exercises, and the subjects of the lectures.

EDWARD COWLES,

Medical Superintendent.

MCLEAN HOSPITAL TRAINING SCHOOL FOR NURSES, WAVERLEY, MASS.

The Trustees of the Massachusetts General Hospital Corporation, having established at the McLean Hospital a School for Nurses, offer to give to men and women desirous of becoming professional nurses a two years' course of training in general nursing, with special reference to the care of cases of nervous and mental disease. The Training School is conducted by the Superintendent of the Hospital, under the authority of the Board of Trustees.

Those wishing to receive such a course of instruction must write to the Superintendent of the McLean Hospital, Waverley, Mass., giving a brief personal history and also the names and addresses of three responsible persons who know of their good character and capabilities. If it is then thought advisable for such prospective candidates to make a formal application, blank forms especially provided for this purpose will be sent to them.

Candidates must be in sound health, and must send with their application a certificate from a physician certifying to the fact. The most desirable age is from twenty-one to thirty-five years.

Upon the recommendation of the Superintendent of the Hospital and the approval of the Trustees, they will be received for two months on probation, at the expiration of which time they will, if accepted, sign an agreement to complete the prescribed course of two years.

The nurses are subject to the rules of the Hospital. Their fitness for the work and the propriety of

retaining or dismissing them at the end of the two months of trial are determined by the authorities in charge of the School, under the direction of the Trustees.

At the end of the first six months the record of each pupil is again carefully scrutinized and the right is reserved to terminate then, or at any other time, the connection of any pupil or nurse with the School and Hospital for inefficiency, misconduct, generally unsatisfactory record, or for any other reason which may be deemed sufficient.

All nurses are required to be sober, honest, truthful, trustworthy, punctual, quiet, orderly, cleanly, neat, patient, kind, and cheerful.

Instruction is given by the officers of the Hospital. The course includes the general care of the sick; the managing of helpless patients in bed, in moving, changing bed and body linen, making of beds, etc.; giving baths, keeping patients warm or cool, preventing and dressing bed sores; bandaging, applying of fomentations, poultices, and minor dressings; the preparing and serving of food, the feeding of helpless patients and those who refuse food; the administering of enemas and use of the catheter; attendance upon patients requiring diversion and companionship; the observation of mental symptoms, delusions, hallucinations, delirium, stupor, etc.; and the care of excited, violent, and suicidal patients.

They are also given instruction in the best practical methods of supplying fresh air, and of warming and ventilating sick-rooms in a proper manner, and are taught to take proper care of rooms and wards, to keep all utensils perfectly clean and disinfected, etc.; to observe the sick accurately in regard to the state of secretions, pulse, breathing, skin, temperature,

sleep, appetite, effect of diet, of stimulants, and medicine; the giving of massage, and the managing of convalescents.

Instruction is also given in the modern methods of physical training, by the use of free movements and the usual apparatus, in a gymnasium provided for the patients. The nurses assist in the medical application of physical exercise. Each nurse is required to have a gymnasium costume, the material for which will be furnished, at moderate cost, by the Hospital.

Written examinations take place at the middle and end of each school year, and pupils must attain on critical marking at least sixty per cent.

Instruction by text books and lectures is given for eight months of the year, from October 1 to May 31, but accepted candidates enter the School whenever vacancies occur. They are usually taken in the order of acceptance, though some can anticipate this time and enter with less delay, if they are so situated as to be able to have their names placed on the emergency list. It is no disadvantage to enter the School between May and October, as the pupil gets some practical knowledge of the care of patients before taking up the study required by recitations and lectures.

There is no fixed date for graduation. On completion of the full term of two years, nurses who have passed all the required examinations receive diplomas certifying to their period of training, their proficiency, and good character.

The pupils reside in the Hospital and are employed as assistant nurses in its wards. The men are paid twenty dollars (\$20) per month during the first year, and twenty-three dollars (\$23) per month during the second year. The women are paid twelve dollars

(\$12) per month during the first year, and fifteen dollars (\$15) per month during the second year. Their education during this time is a valuable addition to the compensation for their services.

Most graduates engage in private nursing or accept positions of trust in other institutions. Some are invited and prefer to remain in the service of this Hospital. Men graduates of this School are paid twenty-seven dollars (\$27) per month during the first year, and thirty dollars (\$30) per month thereafter. Women graduates of this School are paid twenty-five dollars (\$25) per month during the first year, and thirty dollars (\$30) per month thereafter. Graduates of this School, who are also graduates of the Training School for Nurses at the Massachusetts General Hospital in Boston, are paid thirty-five dollars (\$35) per month.

The women probationers while on duty are expected to dress plainly and neatly in a cotton gown, and are permitted to wear, of the regular uniform, only the cap and apron. The men wear ordinary plain clothing. After formally joining the School, at the end of the period of probation, both men and women are required to wear the Hospital uniform at all times while on duty in the wards.

Women graduates of this School who wish to have additional practical experience and instruction in general nursing, have the privilege, under certain restrictions, of entering the Training School for Nurses at the Massachusetts General Hospital in Boston. Such graduates will, after one year's satisfactory study, receive the diploma from that School, in addition to the diploma received from the McLean Hospital Training School.

COURSE OF INSTRUCTION.

Junior Year :

- | | |
|--|--------------------|
| Physiology and Hygiene (to the Nervous System) . . . | <i>Hutchison.</i> |
| Fever-Nursing | <i>Wilson.</i> |
| A Text-Book of Nursing | <i>Weeks-Shaw.</i> |
| What to do First in Emergencies | <i>Dulles.</i> |
| Practical Instruction in Massage (twelve lessons). | |
| Physical Training (thirty lessons). | |
| Practical Instruction in Cooking; for women, each morning for one month; for men, ten lessons. | |
| Instruction in the Wards by the Superintendent of Nurses, Supervisor, and Head Nurses. | |
| A Lecture each week. — Assistant Physicians. | |

Senior Year:

- | | |
|--|--------------------|
| Physiology and Hygiene (completed) | <i>Hutchison.</i> |
| A Text-Book of Nursing (completed) | <i>Weeks-Shaw.</i> |
| A Hand-Book of Obstetrical Nursing | <i>Fullerton.</i> |
| How to Care for the Insane | <i>Granger.</i> |
| Physical Training (thirty lessons). | |
| Practical Instruction in Massage (ten lessons, men). | |
| Instruction in the Wards by the Superintendent of Nurses, Supervisor, and Head Nurses. | |
| A Lecture each week. — Superintendent. | |

Books for Reference:

- | | |

| A Primer of Psychology and Mental Disease | Burr. |

ORDER OF EXERCISES.

Monday.

- 2.30 P. M. Senior or Junior Class, Instruction in Physical Training.
 4.00 P. M. Junior Class, Recitation.

Tuesday.

- 2.45 P. M. Senior or Junior Class (1st or 2d Div.), Massage.
 4.00 P. M. Senior Class, Lecture.

Wednesday.

- 4.00 P. M. Junior Class, Lecture.

Thursday.

- 11.00 A.M. Junior Class (1st Div., six lessons), Bandaging.
 2.45 P. M. Senior or Junior Class (1st or 2d Div.), Massage.
 4.00 P. M. Senior Class, Recitation.
 7.00 P. M. Junior Class (2d Div., six lessons), Bandaging.

Friday.

- 11.00 A.M. Junior Class (in Divisions of six, from February 5), Care of Sick Patients in Bed, Poulticing, etc.
 2.00 P. M. Senior or Junior Class (Div. of eight), Instruction in Cooking.

Saturday.

- 2.45 P. M. Senior or Junior Class, Instruction in Physical Training.

WOMEN.**Monday.**

- 9.00 A. M. Junior Class, in divisions of two for one month each (every morning in the week), Instruction in Cooking.
 11.00 A.M. Junior Class (Div. of six), Instruction in Physical Training and Massage.
 4.00 P. M. Senior Class (1st Div.), Recitation.
 7.00 P. M. Junior Class (1st Div.), Recitation.

Tuesday.

- 11.00 A.M. Senior Class (2d Div.), Recitation.
 2.00 P. M. Senior Class (Div. of four), Poulticing, Bandaging, Drugs, etc.
 4.00 P. M. Senior Class, Lecture.

Wednesday.

- 11.00 A.M. Junior Class (2d Div.), Recitation.
 4.00 P. M. Junior Class (Div. of six), Care of Sick Patients in Bed, Poulticing, etc.
 7.15 P. M. Junior Class (Div. of six), Instruction in Physical Training and Massage.

Thursday.

- 11.00 A.M. Head Nurses, Review, etc.

Friday.

- 4.00 P. M. Junior Class, Lecture.

Saturday.

- 4.00 P. M. Junior Class (Div. of six), Instruction in Physical Training and Massage.

SUBJECTS OF LECTURES.

JUNIOR YEAR.

TWO. — The skeleton: skull, thorax, pelvis and spinal column, general anatomy and physiology; a consideration of the more common injuries to which they are liable.

THREE. — Surgical landmarks: prominent points of the skeleton [demonstration on a subject]. Fracture and repair of bones. The joints; sprains, dislocations, etc.

ONE. — The muscles: general anatomy and physiology. Paralysis, rigor mortis, etc.

THREE. — The blood: its functions, coagulation, etc. The heart and blood vessels. The pulse; information to be gained from it; causes of variation in rate, strength, etc. Diseases of the circulatory system.

TWO. — Hæmorrhage: varieties, — epistaxis, hæmoptysis, from various parts of the alimentary canal, post partum, apoplexy, etc. Symptoms of serious hæmorrhage; various means of stopping it. Demonstration on a subject of location of blood-vessels and methods of applying pressure.

TWO. — Respiration: organs and mechanism of; effect of various diseases; asphyxia; artificial respiration [demonstration on a subject].

ONE. — Suicide: causes, means, etc. Care of suicidal patients.

ONE. — Animal heat: its source, regulation, change in disease, and methods of ascertaining and recording.

ONE. — The use of heat in the treatment of disease; sources and the effects obtained; baths general and local, poultices, fomentations, etc.

TWO. — The use of cold in the treatment of disease; sources and effects. Fever; methods of reducing high bodily temperature.

TWO. — Pathogenic germs; contagious diseases; disinfectants and disinfection.

THREE. — Consideration of some common acute diseases.

ONE. — Various diseases of which dropsy is a symptom.

FIVE. — Effect of states of mind on the body; mind cure, etc. Drugs and medicines; methods of administration; circumstances that modify their ordinary effects.

TWO. — Surgical nursing.

TWO. — Charts and records. Practical hints.

SENIOR YEAR.

ONE. — The history of hospitals.

ONE. — The history of nursing.

ONE. — Duties of the nurse.

ONE. — General care of patients. Personal hygiene.

ONE. — Hospital housekeeping.

ONE. — Heating and ventilation.

TWO. — The nervous system.

ONE. — The special senses.

ONE. — Reflex action of the nervous system.

FOUR. — Mental faculties and their disorders.

ONE. — Common sensations and their disorders.

ONE. — Nervous exhaustion and its nursing care.

ONE. — Nature and causes of insanity.

ONE. — Hypochondriasis. Eccentricity.

TWO. — Fixed ideas. Hysteria.

THREE. — Melancholia and mania. The duties of the nurse in the
care of these conditions.

ONE. — Dementia, and the care of patients in its various forms.

ONE. — Delusional insanity; its various forms.

ONE. — Epilepsy and convulsions.

ONE. — General paralysis.

ONE. — Writing notes of mental symptoms.

THE

EIGHTY-FIFTH ANNUAL REPORT

FOR THE YEAR 1898.

At the annual meeting of the Corporation held Feb. 2, 1898, the Hon. Francis C. Lowell was elected to fill the office of Vice-President made vacant by the death of the Hon. John Lowell.

The committee appointed by the Trustees to prepare the Annual Report to the Corporation have the honor to submit the following:—

THE MASSACHUSETTS GENERAL HOSPITAL.

A summary of the financial exhibit for the year for this department, with that for 1897 added for comparison, is as follows:—

	1898.	1897.
Expenses	\$173,763.39	\$171,469.60
Charges to patients	66,774.19	52,179.66
Deficit	\$106,989.20	\$119,289.94
Income from various funds and free bed subscriptions	106,120.57	97,159.42
Net deficit charged to General Fund	\$868.63	\$22,130.52
The receipts from paying patients show an increase of	\$14,594.53 or 27.73%	
The expenses of administration show an increase of	\$2,293.79 or 1.34%	
The average number of patients shows an increase of	18 or 7.65%	

The total number of patients treated during the year was 5,053 as against 4,312 in 1897, while the

average number in the Hospital during the year was 253 as against 235.

The number of free patients treated during the year was 3,010 as against 2,980 in 1897, while the number of patients paying in whole or in part was 2,043 as against 1,332.

The average cost per week was \$13.16 as against \$14.03.

The foregoing facts amply justify the satisfaction that the Trustees have taken in the marked administrative ability shown by the Resident Physician, Dr. Herbert B. Howard. Dr. Howard assumed the duties of this office on June 1, 1897, so that his report covers the first full year of service on his part. His administration has been eminently successful both on the side of service rendered to the public and of that rendered to the Hospital: to the public he has given an increase of free patient service, and to the Hospital an increase of 27.73% in returns from paying patients.

This result has been accomplished in spite of the severe strain and expense put upon the Hospital owing to the large number of sick soldiers taken there on their return from the war, for whose care nothing has as yet been received from the National Government.

In this connection the loyal service of the Staff, the Resident Physician, and all connected with the Hospital, under the increased responsibilities and burdens of caring for the sick soldiers, may well be referred to as worthy of all praise.

The number of out-patients treated was 28,741 as against 29,181 in 1897; the average daily attendance was 294 as against 303.

During the past year the Treadwell Library has

for the first time in its history been classified and arranged. It has been found to contain 4,891 volumes.

It appears from the Surgical Tables that 219 cases of Appendicitis were operated on during the year, of which 201 were during an attack, with the result that 30 died and 171 recovered; 18 were operated on between the attacks, with no deaths. The number of these cases treated at the Hospital has steadily increased during the last five years, until it now appears that a large proportion of these cases occurring near Boston come to this Hospital. Such work is invaluable to this community, as these 171 cases represent so many lives. The admission of 201 septic cases to the Hospital, however, is a serious menace to the antiseptic operations in which the Hospital has in late years excelled. This danger has been met by increased activity of the administration and Staff. The Staff has introduced many improvements in antiseptics; for example, the use of gloves by the operators and assistants has materially lessened the danger of spreading sepsis. There is, however, a great need of more and better operating rooms, so that the surgeon can separate the septic from the aseptic operations. With such a large amount of important work on hand the Hospital appliances should be made as perfect as possible.

The X-ray apparatus, given to the Hospital by Dr. Charles G. Weld in 1897, has proved to be of the greatest value; not only have most of the broken bones been treated by the light of the X-rays, but bullets and other foreign bodies are constantly located in this way. The operation of Œsophagotomy has been done four times for coins and whistles caught in the throat.

It appears from the Medical Tables that the number of cases of Typhoid Fever admitted during the year is more than double the number received during 1897, being 218 as against 95. This increase was due largely to the necessity of providing for the treatment of sick soldiers, especially for those who had acquired Typhoid Fever at Santiago and Porto Rico. In like manner the increase in the number of cases of Malaria from 35 to 110 is to be explained by the admission of a considerable number of soldiers who became infected with this disease during the summer campaign. The diminution in the number of patients with Cerebro-Spinal Meningitis from 32 to 14 gives evidence of the subsidence of the epidemic of this malady, which affected Boston a year ago and which was of such severity that nearly one half of the cases admitted to the Hospital proved fatal.

A report of the work of the Clinical-Pathological Laboratory, printed elsewhere, should be read by all interested in the application of the modern microscopical, bacteriological, and chemical methods, which are of such great importance in the diagnosis and study of disease; it is especially recommended to those whose generous contributions made possible the building and its equipment.

On June 3, in accordance with the recommendation of the Visiting Physicians and Surgeons of the General Hospital, it was

"Voted: That the Seniors in the Out-Patient Department for diseases of the skin, of the nervous system, of the throat, and of the eye be regarded as members of the Visiting Staff, so far as that recognition confers the right to attend and vote at the meetings of the Staff which are called to consider general questions of Hospital policy."

Under the terms of this vote, Drs. James C. White, James J. Putnam, Algernon Coolidge, Jr., and Oliver F. Wadsworth became members of the Visiting Staff.

Your Trustees and the Trustees of the Massachusetts Charitable Eye and Ear Infirmary, feeling that it would be for the common advantage of both institutions to co-operate in the supply of light, heat, and power, for the new building of the Infirmary and the General Hospital buildings, have entered into an arrangement whereby the Hospital is to build, equip, and operate on its own land a plant of sufficient capacity to supply both institutions with light, heat, and power. The annual payment to be made by the Infirmary to the Hospital for the service is to be equitably adjusted on the basis of its proportionate share actually used. The original cost of construction, and the cost of maintenance, as well as operating expenses, are all to be considered in determining the amount to be paid. A material saving of expense to both institutions is hoped for from this arrangement, and the plant is rapidly approaching completion.

On February 25, Dr. Herman J. Vickery was elected to fill the vacancy on the Board of Visiting Physicians caused by the resignation of Dr. Edward N. Whittier, who retired with the grateful appreciation of the Trustees for his valuable services.

On April 22, Dr. Richard C. Cabot was elected as one of the Physicians to Out-Patients.

On June 3, Dr. Sidney A. Lord was appointed assistant for the diseases of the nervous system in the Out-Patient Department.

On December 16, the office of Assistant Resident Physician was established, and Dr. Frederick W. Washburn, Jr., was chosen to fill the office.

A most welcome recognition and support of one branch of our work was received from the J. W. and Belinda L. Randall Charities Corporation, in the form of a gift of \$20,000, to be known as "The John W. and Belinda L. Randall Fund," the income to be used to increase and diffuse knowledge in relation to health and disease by such work as that now done in the Pathological Laboratory of the General Hospital.

The Trustees are considering plans for the much-needed improvement and development of the plant of the General Hospital,—plans which are made possible through the generous consideration shown for this Institution by the late Hon. Henry L. Pierce. Great are the benefits that will accrue to this community from his liberality, in itself an inspiration to higher endeavor on the part of those having in charge the interests of this Institution.

THE CONVALESCENT HOME.

A summary of the financial exhibit for the year for this department, with that of 1897 added for comparison, is as follows:—

	1898.	1897.
Expenses	\$9,727.84	\$9,594.25
Charges to patients	2,192.31	1,822.45
Deficit	\$7,535.53	\$7,771.80
Income from Convalescent Home Fund	6,552.90	7,281.05
Net deficit	\$982.63	\$490.75

If the income derived from the fund had been equal in amount to that of 1897, the net deficit would have been only \$254.48, and that with an average number of patients for the year of 26 as against 22 in 1897.

THE McLEAN HOSPITAL.

A summary of the financial exhibit for the year for this department, with that of 1897 added for comparison, is as follows: —

	1898.	1897.
Expenses	\$218,673.60	\$202,454.18
Charges to patients	186,769.92	170,894.74
Deficit	\$31,903.68	\$31,559.44
Income from various funds	16,455.44	11,975.00
Net deficit charged to General Fund	\$15,448.24	\$19,584.44
The receipts from paying patients show an increase of \$15,875.18 or 9.21%		
The expenses of administration show an increase of \$16,219.42 or 8.01%		
The average number of patients shows an increase of 10 or 7%		

The cost of repairs during the year was unexpectedly and disappointingly large, showing an increase of \$5,208 over that of 1897, largely due to defective masonry in the original construction of some of the buildings. But for this item the deficit for the year would have been materially less.

As will be seen in the Superintendent's Report, printed elsewhere, there was an increase in the average number of patients during the year, the number of cases treated, and the number of cases discharged.

The number of admissions during the year was 132 as against 137 in 1897; the number of recoveries 27 as against 42, or 20% of the admissions.

The average cost per week per patient was \$26.84 as against \$27.02.

The Superintendent's Report says: "The results of the third year's work in the new Hospital at Waverley show that it is attaining a normal condition as to the numbers admitted and discharged; the daily

average of patients, being increased to 154, was nearly equal to the full capacity of the Hospital. The active movement of the population was continued as in previous years; this was shown by there being, on the basis of 154 patients, as the daily average, 132 admissions and 296 different persons treated. There was a tendency towards lessening the duration of treatment in the Hospital in the 27 cases recovered at an average of 4.87 months: the smaller number of these cases is consistent with the reduced proportion of cases regarded as recent, while admission continues to be sought for the first care of those who are afterwards transferred to the State hospitals as chronic cases."

An interesting indication of the change of attitude of the afflicted toward the Institution during the years is found in the increased application for admission of voluntary patients, from 1 in 1881 to 61, or 46% of the year's admissions, in 1898; showing that the asylum, or retreat, of the past is coming to be more and more recognized as the hospital,—a curative and remedial agency,—of the present.

The contemplated system of baths in the Women's Gymnasium is in process of being installed, from the use of which the Trustees are confidently expecting distinct remedial results.

On April 22, the resignation of Dr. E. Stanley Abbot, second Assistant Physician at the McLean Hospital, was received, and it was

"*Voted*: That the resignation be accepted and that the Secretary express to Dr. Abbot the high sense of the value of his services entertained by the Trustees."

The Trustees desire to express their appreciation of the successful inauguration of the Art Exhibition

at the McLean Hospital, and of the labors of Dr. Cowles and Dr. Tuttle to that end; at the same time they would record their obligation to Miss Lucy Smith for originating this enterprise, and to the kind friends who have made it possible by generously loaning and contributing works of art.

Mrs. Sarah A. Matchett has added to her list of benefits conferred on this Institution by the gift of about eight acres of land lying between the grounds of the McLean Hospital and Mill Street.

Here, again, we take pleasure in recording our obligation to Mr. Pierce's generous consideration, which has enabled us to avail ourselves of the fund of \$100,000 left by Mr. Thomas E. Proctor, to be used for the erection and maintenance of one or more buildings at the McLean Hospital, when by its own increase and by additions the fund should amount to \$400,000. The Trustees have appropriated \$290,000 of the Pierce bequest for this purpose, thereby enabling them to pay off the debt on the McLean plant, retaining \$30,000 as a fund for maintenance of buildings in compliance with the terms of Mr. Proctor's bequest.

Already, however, the need of increased accommodations on the women's side is making itself felt. The Wyman House, for excited patients, was planned to accommodate 14, as large a number of this class as should be accommodated in one house; but owing to pressure of circumstances, we have been compelled in the last few months to care for from 18 to 20 patients, — a condition which has produced a general congestion that cannot but react injuriously on the patients, and prevent the attainment of the best results. And further, the Wyman House being so overcrowded, there is no opportunity

for removing from the East House such patients as, owing to a change for the worse, become fit subjects for treatment in the Wyman, thus keeping the East House so full that it is often impossible to make the removals to it called for by the conditions, from the Wyman on the one side and the Belknap on the other.

The needed improvements at the General Hospital are imperative, and even the funds at hand will not place that department where the Trustees would have it; but this need at the McLean Hospital is none the less real, and it is earnestly to be hoped that the charitably disposed will hasten to its relief. A building accommodating 30 patients and costing about \$75,000 would increase the income of the Hospital much more than the expenses, as the general expenses, which would remain the same, form so large a percentage of the total expense.

The net deficit charged to the General Fund for all the departments was \$17,229.50 in 1898, as against \$42,205.71 in 1897, a decrease of nearly 60%.

At the close of 1897, Mr. William Endicott, Jr., declined to be a candidate for re-election to the Board of Trustees, and it was

"Voted: That the Secretary express to Mr. Endicott the very high appreciation of his long and valuable services as Trustee held by the Board, and their great regret that he has declined to be a candidate for re-election."

On March 25, Mr. Reginald Gray was elected a Trustee to fill the vacancy.

Dr. Samuel Eliot, Chairman of the Board of Trustees, died on the 14th day of September, 1898. At

the next meeting of the Board the following resolve was adopted:—

“Resolved: That we have heard with deep sorrow of the death of our associate, Dr. Samuel Eliot, on the 14th instant. His constant and faithful service as Trustee of the Massachusetts General Hospital for thirty-two years, during the last twenty-four of which he filled the position of Chairman of the Board, has ever commanded our confidence and respect, while his patient attention to details and his unvarying courtesy of manner have won our admiration and our love. No little of the successful development and enlargement of the work of the Institutions under our charge has been due to his watchful oversight and ever jealous care for their best interests. We shall miss his prompt attendance at our meetings and the conscientious performance of all the duties which have devolved upon him.”

At a later date, Mr. Edmund Dwight was elected Chairman of the Board and Mr. Moses Williams was made a Trustee to fill the vacancy.

A beautiful tribute to the memory of Dr. Samuel Eliot—one which his co-workers on the Board of Trustees could not fail to keenly appreciate—was the gift from a lady, who desired her name to remain undisclosed, of the sum of \$27,000 as the nucleus of a fund for the building and maintenance of a chapel on the grounds of the McLean Hospital, to be known as “The Samuel Eliot Memorial Chapel.” The chapel is to be built when the fund, with such additions as shall be made thereto by others, is, in the opinion of the Trustees, sufficient in amount for the building and its maintenance. It is hardly to be supposed that the building of this chapel will be long delayed in view of the many to

whom such an addition to the Institution will peculiarly appeal.

The Book of Donations records, among other gifts, the receipt from the Estate of Thomas T. Wyman, of \$65,000, and the receipt of \$25,000 from the Estate of J. Putnam Bradlee, by appointment of Miss Helen C. Bradlee, so often a benefactress of the Hospital; also a bequest of \$10,000 from Elizabeth C. Ware, in memory of her husband, Dr. Charles E. Ware, for ten years a Visiting Physician, and later an honored member of the Board of Consultation at the General Hospital; the sum of \$1,250 was taken from this bequest, as a succession tax, by the National Government.

In closing, the Trustees would emphasize the need of a generous support on the part of the charitably disposed to the fund and annual subscription for Free Beds. In its highest development this Institution should be in a position to devote all its resources to the service of those who suffer and have not the means to pay for alleviation. This goal can only be won by the unstinted support of those who recognize the obligation and the privilege of helping this good work.

REGINALD GRAY,

MOSES WILLIAMS,

Committee of the Trustees.

DONATIONS.

The Committee on the Book of Donations reports that the following donations and legacies have been received during the year: —

Legacy of Henry L. Pierce, income for Free Beds	\$50,000.00
Legacy as one of the residuary legatees under the will of Henry L. Pierce	700,000.00
Part of bequest of Mary B. Turner	9.10
Part of bequest of Anna S. C. Prince	150.00
Bequest of Harriet Louisa Brown, income unrestricted	5,000.00
Donation from the J. W. and Belinda Randall Charities Corporation, to be held as a permanent fund and called the "John W. and Belinda L. Randall Fund," the income to be used to increase and diffuse knowledge in relation to health and disease by such work as that now done in the Pathological Laboratory of the Hospital	20,000.00
Part of bequest of Thomas T. Wyman	65,000.00
Donation for the "Samuel Eliot Memorial Chapel Fund" at the McLean Hospital, name of the donor not disclosed	27,000.00
Donation of Mrs. Susan Wheeler to "Free Bed Fund," in memory of Stuart Wadsworth Wheeler	1,000.00
Donation from the Estate of J. Putnam Bradlee, at the request of Miss Helen C. Bradlee	25,000.00

Legacy of Elizabeth C. Ware, in memory of Dr.	
Charles E. Ware, \$10,000 less \$1,250 taken by	
United States as a legacy tax	\$8,750.00
That there have been received in subscriptions for	
Free Beds, as shown in the Treasurer's	
Annual Report	11,925.00
	<hr/>
	\$913,834.10

And that these sums have been entered in the Book of Donations in the usual form.

CHARLES V. BEMIS,

Committee on the Book of Donations.

MASSACHUSETTS GENERAL HOSPITAL,
Dec. 31, 1898.

REPORT OF THE TREASURER.

In accordance with the Fifth Article of the By-Laws, the annual report of the accounts of the Massachusetts General Hospital, made up to the last day of December, 1898, is respectfully submitted, to be laid before the Corporation at its annual meeting.

Dr. FRANKLIN HAVEN, Treasurer, in account with the MASSACHUSETTS GENERAL HOSPITAL, Cr.

 1897 = 4,711.
 1898 = 5,322.

Examination of Accounts.

BOSTON, Feb. 10, 1899.

*To the Committee on Accounts,**Massachusetts General Hospital: —*

I hereby certify that I have examined the vouchers, as per division books of the Convalescents' Home, McLean and General Hospitals, for the year ending Dec. 31, 1898, and I found the same correct, and the amounts properly entered in the cash books.

I have examined the books of the Treasurer for the year ending Dec. 31, 1898, as follows, viz.: the cash books, journalizings, and the trial balance, and I found the same correct. I found vouchers for the cash payments, and I found cash in the banks as per amount called for by the Treasurer's cash book. The balances on the Treasurer's books agree with the balances on the books at the McLean and General Hospitals. I found bonds and stock certificates, as per bond and stock accounts on the trial balance herewith, and notes as per Notes Receivable account.

WALDO L. ABBOTT,
Auditor of Accounts.

THE ANNUAL REPORT OF THE RESIDENT PHYSICIAN OF THE MASSACHUSETTS GENERAL HOSPITAL.

The average number of patients in the hospital during the year was 253.

Of paying patients, 2 paid \$50; 85 paid \$35; 2 paid \$28; 2 paid \$25; 1 paid \$24.50; 178 paid \$21; 4 paid \$20; 3 paid \$18; 2 paid \$17.50; 1 paid \$17; 30 paid \$15; 23 paid \$14; 680 paid \$10.50; 103 paid \$10; 1 paid \$12; 1 paid \$8; 535 paid \$7; 1 paid \$6.50; 8 paid \$6; 96 paid \$5.25; 142 paid \$5; 1 paid \$4.50; 1 paid \$4.20; 10 paid \$4; 18 paid \$3.50; 2 paid \$3.25; 12 paid \$3; 2 paid \$2.50; 6 paid \$2.

Whole number of patients treated during the year: paying, 1,868; paying part of the time, 175; free, 3,010; total, 5,053.

Proportion of deaths to whole number of results, 8.51 per cent.

There were 3,514 patients treated in the Accident Room. Of this number 943 were retained in the hospital.

The greatest number of patients at one time was 304.

The least number of patients at one time was 212.

Total number of days for paying patients, 37,255; free, 55,153; total, 92,408.

Average time paying and free patients, 18 days.

The year has been a busy one. 741 more patients have been treated than last year. The average stay of the patients in the hospital has dropped another day. The number treated passes the 5,000 notch

for the first time. It seems little short of marvelous to compare these numbers with those of twenty years ago, when it took almost the same number of beds for the treatment of less than 2,000 patients. Asepsis has been perhaps the most powerful aid on the surgical side in facilitating the efficient handling of so many additional patients, and without looking it up one is tempted to credit increased surgical facilities and skill with perhaps an undue proportion of this large increase in the number of patients treated.

In 1878 . . .	713	Medical .	1,081	Surgical Cases were Admitted.
„ 1888 . . .	1,285	„ . .	1,971	„ „ „ „
„ 1898 . . .	2,000	„ . .	2,807	„ „ „ „

This would seem to show that the medical side of the hospital is keeping pace with the surgical side.

IMPROVEMENTS.

The heat, light, and power plant for which appropriation was made last summer is rapidly approaching completion. All of the engines are in place. One of them was ready to furnish power to the Eye and Ear Infirmary January 13. We have been heating the Eye and Ear Infirmary from the old heating plant since November 1.

The wiring throughout the Institution has all been inspected and renewed where necessary for the installation of the 220 volt system.

The plumbing throughout the hospital has been looked over and repaired, so that it is in a safe though not a very substantial condition.

• Two new horses have been purchased and one new ambulance, and the old ambulance has been thoroughly repaired.

"During the past year the Treadwell Library has for the first time in its history been classified and arranged. It has been found to contain 4,891 volumes.

"Since January, 1898, 32 new volumes have been purchased. 22 new volumes have been received by donation, and 45 volumes of periodicals have been bound and placed on the shelves. This means a total of 99 books added to the Library within the year. Further, 88 medical reprints and 12 reports from other institutions have been received. 29 medical periodicals are regularly received.

"The assistant librarian, Mrs. Myers, has been occupied for a considerable portion of the year in making a card catalogue of past patients of the hospital. During the coming year, it is intended to have made a card catalogue of the books in the Library. This will add greatly to the value of the Library, already much enhanced by her thorough and classified arrangement of it."

The needs of the hospital have been dealt with in a special report so recently that I will not consider them here.

The usual form of tables and statistics follow in their regular order.

Very respectfully yours,

HERBERT B. HOWARD,

Resident Physician.

MASSACHUSETTS GENERAL HOSPITAL TRAINING SCHOOL FOR NURSES.

The Massachusetts General Hospital Training School for Nurses has made arrangements for giving a two years' training to women desirous of becoming professional nurses.

Persons wishing to receive this course of instruction must apply to the Superintendent of the Massachusetts General Hospital Training School for Nurses, Blossom Street, Boston, Mass.

The most desirable age for candidates is from twenty-five to thirty-five years. They must be in good health, and must refer to some responsible person as to their moral character. After approval by the Superintendent of the School and the Resident Physician of the Hospital, they are received for one month on probation. During this month they are boarded and lodged at the Hospital, but receive no compensation.

They are under the authority of the Resident Physician and the Superintendent, and are subject to the Rules of the School and of the Hospital. Their fitness for the work, and the propriety of retaining or dismissing them at the end of the month of trial, are determined by the Resident Physician and the Superintendent and Directors of the School; and the same authorities can also discharge them at any time during their connection with the School, in case of misconduct or inefficiency. They reside in the Hospital, and serve as assistant nurses in the wards. When on service, they are required to wear the Hospital uniform.

Training.

Those fulfilling the conditions of the probationary month are accepted as pupils. They must sign a written agreement to remain at the School for two years (including the probationary month) and to conform to its rules.

The instruction includes:—

1. The dressing of burns, sores, and wounds; the preparation and application of fomentations, poultices, cups, leeches, and of minor dressings.
2. The administration of enemata, the use of the catheter, and the giving of baths.

3. The principles of massage, with practical workings.
4. The care of the patient's room; the making of beds; the principles of ventilation, and their practical application.
5. The management and care of helpless patients; the prevention and treatment of bed sores.
6. The manufacture of bandages; the application of bandages and splints.
7. Emergencies and their treatment.
8. The preparation, cooking, and serving of food; the use of stimulants.

They are also taught how to observe accurately the secretions, expectorations, pulse, skin, appetite, temperature, sleep, eruptions, and the effect of diet, stimulants, and medicine. They are also instructed with regard to the management of convalescents. The instruction is given mainly by the Superintendent and by the Head Nurses. Lectures, recitations, and demonstrations, by members of the Hospital Staff, also take place at stated periods.

Examinations, conducted by a Board of Medical Examiners, are held quarterly.

The pupils are employed as assistant nurses in the wards of the Hospital, and receive ten dollars (\$10) a month (after the probationary month) during the first year, and fourteen dollars (\$14) a month during the second year, for their personal expenses. The education during this time is considered a full equivalent for their services. During both years of the course they board and lodge at the Hospital. Their washing is also done at the expense of the Hospital. Pupils are required to come prepared to pay for their uniform at the close of the probationary month. The expense of the uniform will not exceed twelve dollars.

When the full term of two years is satisfactorily completed, a diploma is given certifying to their period of training, their proficiency, and moral character. The Training School provides a badge, to which graduates are entitled on the payment of seven dollars.

The Directors reserve the right to terminate the connection of a pupil with the School for any reason which they may deem sufficient.

A graduate of this School, who desires to acquire a special proficiency in the care of cases of nervous and mental diseases, has the privilege, under certain restrictions, of entering the McLean Hospital Training School for Nurses. Such graduates

will, after one year's satisfactory study, receive the diploma from that School, in addition to the one received from the Massachusetts General Hospital Training School.

Massachusetts General Hospital Training School for Nurses, April, 1898.

Statistics for the year 1898 : —

Number of Applications	935
Number Admitted	66
Number Graduated	36

LIST OF LECTURES AND SUBJECTS.

FOR THE YEAR 1898-99.

Lectures to be given Thursdays at 4 P. M.

- | | |
|--|-------------------------|
| DR. A. K. STONE. | September 15, 23. |
| The physiology of digestion. The preparation and methods of serving the various foods, including the use of nutritive enemata. | |
| DR. J. J. MINOT. | October 6. |
| General medical nursing, including the use of leeches, blisters, cuppings, enemata, and baths. | |
| DR. HERMAN F. VICKERY. | October 13. |
| Use of disinfectants and deodorizers with special reference to the care of contagious diseases. | |
| DR. JAMES M. JACKSON. | October 20. |
| Gynæcology. | |
| DR. JAMES C. WHITE. | October 27, November 3. |
| The anatomy and care of the skin. | |
| DR. JAMES H. WRIGHT. | November 10, 17. |
| Care of the dead. Autopsies. | |
| DR. HERBERT B. HOWARD. | November 23. |
| General remarks to the nurses. | |
| DR. JAMES M. JACKSON. | December 1, 8. |
| The preparation of medicines, their doses, and methods of administration. Poison emergencies. | |

- DR. W. W. CONANT. December 15, 22.
Applied anatomy.
- DR. R. CABOT. December 29, January 5.
Account of the circulation, the pulse, respiration and temperature, secretions and excretions. Examination of the urine.
- DR. CHARLES L. SCUDDER. January 12, 19, 26, February 2.
Wounds, methods of repair in wounds, inflammation, surgical fevers, the principles of antiseptic and aseptic surgery, preparations to be made for a surgical operation in private nursing.
Special nursing in cases of tracheotomy, intubation of the larynx, and abdominal surgery.
- DR. CHARLES W. TOWNSEND. February 9, 16.
Special nursing in obstetric cases.
- DR. HERMAN F. VICKERY. February 23, March 2.
Special nursing in diseases of the thoracic and abdominal organs.
- DR. MAURICE H. RICHARDSON. March 9, 16, 23.
The administration of anæsthetics. Care of patients before, during, and after operations, with possible emergencies (shock, hæmorrhage, and collapse).
- DR. J. J. MINOT. March 30.
Special nursing in cases of fever.
- DR. J. J. PUTNAM. April 6, 13.
Special nursing in diseases of the nervous system. Massage. Chorea. Convulsions. Epilepsy.
- DR. H. C. BALDWIN. April 20, 27.
Special nursing in mental diseases and for the insane.
- DR. H. C. ERNST. May 4, 11.
Bacteriology.
- DR. F. E. CHENEY. May 18.
Special nursing in diseases of the eye.
- DR. C. A. PORTER. May 25, June 1, 8.
Surgical dressings. Fractures and the applications of splints.

Rules for Admission, etc.

Application for admission of patients should be made at the Hospital on Blossom Street, Boston, on week days between the hours of 9 and 11 A. M. and 2 and 3 P. M.

Recent accidents admitted at all hours.

Out-patients received between the hours of 9 and 10 A. M. week days only. Out-patient service is for the poor only.

Applications from a distance should be made in writing, accompanied by a full description of the case by the attending physician, with reason of the physician for thinking hospital treatment desirable, and when a free bed is needed, by a statement of the pecuniary condition of the patient. Always wait for a reply before sending the patient.

Contagious and chronic diseases are not admitted.

Regular charges to paying patients are as follows: in the Jackson Ward (private), \$35 per week; in small room in the Townsend and Bigelow Wards, \$21 per week; in the General Wards, \$10.50 per week. These rates, covering only expenses of board and lodging, may be increased or abated in individual cases by the Resident Physician.

An ambulance, accompanied by a medical officer, will be dispatched to any point within the city proper for the conveyance of cases of accident or urgent sudden sickness, not contagious, to this Hospital, or elsewhere, upon notice from a physician, the police, or other responsible source, subject to the approval of the Resident Physician.

In cases requiring gratuitous treatment no charge will be made.

DALTON SCHOLARSHIP.

The income of this fund, amounting to \$500 annually, is devoted to investigation in the science of medicine. The rules of the Trustees applicable to it are as follows:—

ARTICLE 1. Candidates shall be nominated to the Board of Trustees by the General Hospital Staff, with recommendations for the information of the Board. They shall be either Internes of the General Hospital or graduates of a regular American college.

ARTICLE 2. The nature of the work in medical investigation proposed to be prosecuted by each candidate shall be designated.

ARTICLE 3. Scholars shall be appointed by the Board from among the candidates named.

ARTICLE 4. Scholars shall be under the supervision of the Staff, and the Staff shall, whenever it thinks desirable, report to the Board any dissatisfaction it may feel as to the work or methods of scholars, and the Board may act in the premises as in the case of Internes.

ARTICLE 5. Scholars are required to do an amount of work equivalent to not less than ten hours per week from the last Wednesday in September to the last Wednesday in June and to present to the Trustees, at the end of the year, a report on the amount and result of the work performed. The results of work of scholars shall appertain to the Hospital, and when made public, the name of the scholar shall accompany the publication; but no publication shall be made unless recommended by the Staff and approved by the Board.

ARTICLE 6. Should the work of a scholar extend through a part of a year only, he shall be entitled to a proportionate share of income.

ARTICLE 7. When the income is insufficient, appointments for the year may be omitted.

ARTICLE 8. Any income not used shall be cumulative and not added to the principal.

ARTICLE 9. Scholars shall be eligible for renomination and reappointment.

ARTICLE 10. Candidates for scholarship should make written application to the Resident Physician of the Massachusetts General Hospital on or before May 15 and the scholarship shall be held for one year from September 15 following.

Further information may be had by applying to the Resident Physician of the Massachusetts General Hospital.

REPORT OF THE CLINICAL-PATHOLOGICAL LABORATORY.

The Clinical-Pathological Laboratory has completed the second year of its existence. The chief purpose of this laboratory has been to give to the hospital the benefit of those modern microscopical, bacteriological, and chemical methods which are of such great importance in the diagnosis and study of disease.

The laboratory occupies a special building, 90 by 25 ft., having two floors for work rooms, and connecting with the autopsy building. Much study has been given to its arrangements and equipment, and it is generally regarded as a model hospital laboratory.

It provides facilities not only for the routine laboratory work, done in connection with the work of the hospital wards, but also for all the other forms of microscopical, bacteriological, and chemical examinations and tests which have relation to clinical medicine and pathology. The work carried on is very diverse in character and requires all the resources of the present establishment, for there are very few hospitals in which so much laboratory work is applied to the diagnosis and study of the cases.

The routine work includes the chemical and microscopical examination of secretions and excretions, the microscopical examination of the blood, and various other procedures which are now necessary in practical medicine and surgery. In addition

to these, a large number of microscopical and bacteriological examinations, requiring special knowledge, are done by the laboratory. Among these may be mentioned the determination of the presence or absence of pathogenic bacteria in inflammatory processes and in other conditions connected with surgical operations; the application of the bacterial culture tests in cases of suspected diphtheria in the hospital wards; the testing of tissues and fluids for the presence of the bacillus of tuberculosis; and the microscopical diagnosis of tumors and neoplasms where there is a doubt as to whether they are benign or malignant, operable or inoperable. The laboratory is not unfrequently called upon to help in the explanation of doubtful cases in the wards and Out-Patient Department, and through its agency during the past two years a number of obscure or unusual forms of disease, including anthrax, glanders, and actinomycosis, have been early identified by modern methods and appropriate treatment applied.

Besides this purely clinical work, a very important function of the laboratory is the making of post-mortem examinations, and the carrying out of the histological and bacteriological work incident thereto. At every post-mortem a careful record is made of all morbid conditions found, and material for microscopical analysis secured from all lesions of pathological interest, the results of which analysis are afterwards added to the first record. Bacteriological examinations are also made, as a rule, of the larger internal organs, as well as of any inflammatory conditions, and these results also recorded. All this entails a large amount of work on the part of the pathologist and his assistants, but it is believed that

in this way valuable data will be accumulated for use in the advancement of medical science.

Not only does the laboratory thus provide for the requirements of the hospital for laboratory work, but it also aims to contribute to medical knowledge, and to give opportunities to a limited number of properly qualified men for study and investigation in pathological histology, chemistry, and bacteriology.

A number of physicians, most of them former house officers in the hospital, have availed themselves of these opportunities.

The department of chemistry, under the charge of Dr. Franz Pfaff, is designed chiefly for special investigation and research in that branch of chemistry which is concerned with the tissues and fluids of the human body. In this department investigations on the xanthin bodies in the urine have been carried on by Dr. Pfaff, and on the action of bile in the digestion of fats by Dr. E. P. Joslin.

The following papers and reports of cases, embodying the results of original research and observation in the laboratory, have been published: —

Histology and pathology of the middle turbinated bone.

Journal of the Boston Society of Medical Sciences,
June, 1898.

During the past year a very complete outfit for photo-micrography has been acquired by the laboratory under a special appropriation by the trustees of the hospital. On account of the great utility of this branch of photography as a means of recording and illustrating the results of investigations done in the laboratory, much time has been devoted to its study with very satisfactory results.

Very respectfully,

JAMES H. WRIGHT, M. D.,

Director of Clinical-Pathological Laboratory.

ANNUAL REPORT (EIGHTY-FIRST)

OF THE

SUPERINTENDENT OF THE MCLEAN HOSPITAL.

The following report, with tabular statements relating to the number and condition of the patients treated in the hospital during the year 1898, is respectfully presented:—

TABLE No. 1.
GENERAL STATISTICS OF THE YEAR.

	Males.	Females.	Total.
Patients in the hospital Jan. 1, 1898	79	88	167
Admissions within the year	63	69	132
Whole number of <i>cases</i> within the year . . .	142	157	299
Discharged within the year	70	73	143
Namely, — as Recovered	8	19	27
Much improved	10	15	25
Improved	14	15	29
Unimproved	19	18	37
Not insane	6	3	9
Deaths	13	3	16
Patients remaining Dec. 31, 1898, } supported as private patients }	72	84	156
Number of different <i>persons</i> within the year .	141	155	296
" " " " admitted	62	68	130
" " " " recovered	8	19	27
Daily average number of patients	71.62	82.29	153.91

During the year one man and one woman were twice admitted, and one woman was discharged and re-admitted. Thus the 299 cases treated represented 296 persons.

Of the 130 persons admitted during the year, 69

were regarded as recent cases, and 61 as chronic, or incurable.

There were 101 persons, 46 men and 55 women who had never been in any hospital. Of the remaining 29 persons, 15, 9 men and 6 women, were admitted for the second time; 8, 4 men and 4 women, for the third time; 3, 2 men and 1 woman, for the fourth time; 1 man for the sixth time; and 1 woman for the seventh time.

In 1898 there were 5 less admissions, 23 more discharges, and 12 more cases under treatment than during the year 1897, and the number present was 11 less at the end than at the beginning of the year.

Of the 141 persons discharged, including deaths, 14, 5 men and 9 women, were transferred or committed to other hospitals in this State, and 3 men and 2 women to hospitals in other States.

Of the 27 persons discharged recovered, 21 had never before been inmates of any hospital; and the remaining 6 persons had been in this hospital. These 6 persons had previously made 12 recoveries.

The average duration of illness from the beginning of attack in all cases recovered was 8.11 months, and the average duration of their residence in the hospital was 4.87 months.

The percentage of recoveries on all admissions, for the year 1898, was 20.5.

The voluntary cases admitted during the year numbered 62, 32 men and 30 women. Of these, 21 were cases of melancholia, 5 of mania, 5 of involution psychosis, 3 of general paralysis, 1 of toxic insanity, 8 of primary dementia, 1 of senile dementia, 2 of *folie du doute*, 1 of cerebral tumor, 1 of hebephrenia, 1 of katatonia, 1 of epilepsy, 1 of post-hemiplegic in-

sanity, 9 not insane, and in 2 cases no diagnosis was made.

The 62 voluntary cases admitted during the year, with 45 such cases remaining from previous years, furnished 19 recoveries. The voluntary patients have yielded 30.65 per cent. of recoveries on the admissions of that class for 1898, thus furnishing more than their due proportion of all the recoveries. Of this class, 8 other cases were discharged much improved, 14 improved, 13 not improved, 4 dead, 9 not insane, and 3 were committed. The total remaining under the voluntary relation at the end of the year is 38 persons, 14 men and 24 women.

The number of persons admitted as voluntary patients under the present law is as follows: namely, 1881, 1; 1882, 11; 1883, 33; 1884, 49; 1885, 34; 1886, 29; 1887, 29; 1888, 34; 1889, 41; 1890, 58; 1891, 40; 1892, 52; 1893, 46; 1894, 40; 1895, 39; 1896, 48; 1897, 61; 1898, 61; — a total of 706 persons in 18 years.

The voluntary cases were four less than one half of all admissions. Two of these were regularly committed after admission to the hospital, — 1 because the hospital authorities did not regard the case as a proper one to remain on the voluntary basis, and 1 because of his demand for discharge. A large proportion of the voluntary patients were, as usual, cases of melancholia, — 21 out of the 62 admissions.

The results of the third year's work in the new hospital at Waverley show that it is attaining a normal condition as to the numbers admitted and discharged; the daily average of patients being increased to 154 was nearly equal to the full capacity of the hospital. The active movement of the population was continued as in previous years; this was shown

by there being, on the basis of 154 patients as the daily average, 132 admissions, 143 discharges, and 296 different persons treated. There was a tendency towards lessening the duration of treatment in the hospital in the 27 cases recovered at an average of 4.87 months. The smaller number of these cases is consistent with the reduced proportion of cases regarded as recent, while admission continues to be sought for the first care of those who are afterwards transferred to the State hospitals as chronic cases.

The progress made during the year in adjusting the work of the hospital to its new conditions realized to some degree the expectations expressed in the last Annual Report. The increase in the number of patients to nearly the normal capacity of the hospital enlarged their contribution to its support. This was aided by the completion, early in the year, of the arrangements for furnishing excellent water from the newly acquired farming land, to the amount of about two thirds of the required supply. Although the new buildings of the farm were not sufficiently near completion to enable it to furnish the chief part of the milk supply until the last three months of the year, the product is now satisfactory, particularly in the improved quality, that can be maintained by having it under our own control. The question of the general running expenses of the hospital, also discussed in the last report, has been made clearer by further experience, which reveals more definitely the peculiar requirements of our establishment, constituted as this one is with respect to its differences from other institutions of its kind. The indications in this regard go to sustain what has been set forth in former reports, that the constructional part of the hospital devoted to the purposes of administration and service,

together with the executive personnel, are large enough to carry a considerably larger number of patients. It was foreseen in the building of the hospital that success in the aims would lead to enlargement; and, in accordance with present views, the time may come when a capacity of over 200 beds would not be inconsistent with a proper balance between the administrative and clinical departments. With each addition to its present room for patients, there would be not only larger benefits bestowed, but the beneficiary work could be done at a lessened cost.

The clinical work was maintained through the year with increasing interest. The conferences now occupy the hour from nine to ten on four mornings of the week, for the thorough study of all cases, both at the time of admission and in review after they are discharged. This method, while giving a more exact knowledge of every case as a guide to treatment, has the general contributive value of leading to advancement in determining different forms of mental disease. This means a better understanding of its causes and consequently of its prevention. On the principle that the pathology of insanity should be studied as nearly as possible at its beginning in the living patient, it has been urged in these reports, during the last ten years, that a most promising source of enlightenment would be found in laboratory investigations in physiological and pathological chemistry for the study of the problems of bodily waste and repair, of nutrition, metabolism, and excretion, and their disorders, in their probable relation to changes in the physical basis of the mental functions. These investigations require the employment of expert skill in making them. They should be complementary to

the other branches of the clinical work in suitable individual cases, such selected cases as present in the least complicated way the special clinical problems that can be studied. Success in such inquiries should afford better guides to treatment; the more complete clinical data should contribute finally to the explaining of pathological changes. The studies in anatomical pathology have been diligently sustained, and the interest excited by each of these lines of research inspires an enthusiasm in the pursuit of all that makes hopeful further labors.

The useful effects of physical training and the various forms of occupation and exercise have had a valuable place in the treatment of the patients during the year. In the first four months Mr. D. H. Holmes made regular visits to the hospital, conducted the classes of patients in gymnastics, and attended to the teaching and application of massage, etc., for the men. Mr. F. S. Seeley, taking charge in June as resident instructor, carried on the same work with satisfactory results to the end of the year, with the change during the summer months from indoor exercises to outdoor sports, games, and occupation. Besides the open-air gymnastics, lawn-mowing, and the like, there were golfing, ball-playing, kite-flying, excursions, etc. The good results gained were manifested in the increasing interest of the patients brought into the classes in the gymnasium. In the class in wood working and carving, about 10 patients regularly joined in the work. Evident curative effects were gained in this department in a number of cases; and in some inert and indifferent patients, a surprising interest was aroused. Excellent and faithful work was done among the women patients in their gymnasium and in all the appropriate out-door exercises.

Miss Alice M. Hurlbutt, in resigning as instructor last October, after five years' service in successfully developing this department, well deserves to be credited for her conscientious and intelligent work. The rooms of the gymnasium, including the "art rooms," were made very attractive during the year by the loans and gifts of paintings, engravings, photographs, casts, and books. The rooms designed to be fitted with apparatus for treatment by baths, including the method of Dr. Baruch, will be ready early in 1899 ; this new service will be under the direction of Miss S. M. Taylor, a graduate of the Boston Normal School of Gymnastics, who has charge of the gymnasium and the work of physical training.

The Entertainment Hall has been regularly in use for its various purposes every week during the season for indoor diversions. The Sunday services held there were well attended. Although the room is attractive and invaluable for the objects for which it was designed, yet our patients have expressed the desire during many years past that there might be a more appropriate place devoted to religious services. When these have held their natural place in the experiences of the normal life of persons whose illnesses are often very long and cause a great deprivation of wholesome privileges, then especially whatever of them can be provided is salutary. It is felt to be most fitting and gratifying that a Samuel Eliot Memorial Chapel should be built here, as there is hope of its soon being done, through the thoughtfulness of a generous giver who has made a liberal beginning of a fund for the purpose.

There were several changes in the medical staff during the year. Dr. E. Stanley Abbot resigned the position of second assistant physician in June, and

has been appointed to that of first assistant at the Northampton Hospital; he is held in high esteem by his former associates here, and has their sympathy and good wishes in his new work. Dr. Charles S. Little, appointed in his place, from Taunton Hospital, could not enter upon his duties until July, 1898, and the position was occupied temporarily by Dr. W. A. McCorn, from the hospital at Kankakee, Ill. In the positions of junior assistant physicians, appointed for services of one year, Dr. George E. Emery resigned, and Dr. George W. Blanchard took the service from June 20 until October 1, when that of Dr. Edwin Leonard, Jr., also terminated; their places were taken by Dr. Albert E. Loveland and Dr. Harry W. Miller, both of whom had just completed a year at Worcester Hospital in like positions. Dr. Charles B. Dunlap was appointed as a junior assistant also for the year from September 1, in the laboratory department.

The Training School for Nurses has followed its established course. Its organization, purposes, and course of instruction are given in the appendix to this report. The work of the instructor in cookery, besides the teaching of the nurses, includes the supervision of the kitchens in the several houses and the ward serving and dining rooms, and the inspection of waste; it includes also her assistance to the purveyor in the preparation of the weekly bills of fare. Improvement has been gained during the year in the working of the system in regulating the cost and quality of the dietary.

The special indications of progress noted in some of the departments of the hospital are only a part of the general settling down to a normal order of things. The chief indication in this regard, at the ending of the year, is that the hospital is in fact nearer to the

desired condition, in which the different elements of the problem have been worked out and brought under due control. That there should be difficulties to overcome was expected; but each year brings some added assurance that good results will be successfully accomplished and encouragement to persevere in the labors needed to gain them.

Very respectfully,

EDWARD COWLES,

Medical Superintendent.

SIXTEENTH ANNUAL REPORT

OF THE

MCLEAN HOSPITAL TRAINING SCHOOL FOR NURSES.

The Training School for Nurses, with the completion of the seventeen years of its existence, has a roll of graduates including 328 names,—221 women and 107 men. In the following summary it is shown how many remain in the work of nursing, and into what positions in life others have gone.

	<i>Men.</i>	<i>Women.</i>
Number of graduates in fourteen years	107	221
Graduates remaining in the service as nurses	13	23
Graduates remaining in the service as officers	1	5
Pupils in Massachusetts General Hospital Training School		11
Previously graduated at Massachusetts General Hospital		
Training School		54
Superintendents of hospitals		2
Superintendents of nurses, other hospitals	2	10
Employed in other institutions	8	7
Engaged in private nursing	32	88
Medical students	14	2
Physicians	10	
Dental student	1	
Dentists	3	
Clergyman	1	
Students	6	1
In other business	10	3
At home	3	12
Married and left the profession		51
Deceased	3	6
Pupils now in this school	30	32

This table shows that of the 328 graduates of the school in seventeen years, 56 men still continue the work, either in hospitals or in private nursing, besides 27 who are either physicians, medical students, or dentists. Of the 148 women who continue their professional work, 28 are in this hospital and 30 in other

institutions; official positions are held by 17 in connection with training schools. When it is considered also that of the remaining 67 graduates the 51 who are married possess qualifications for greater usefulness because of their education as nurses, and that there are only 16 left to be accounted for (12 at their homes and 3 others usefully employed), then it will be seen what contribution the school is making to the success of the work for which it was established. While it is carrying out its double purpose of perfecting the care of the patients in the hospital and at the same time qualifying worthy young women and men for useful work in their own proper interest, it is also rendering a public service of acknowledged value. Many hospitals are now doing, and more may do, their share in this work of training without fear of sending out more nurses than can be employed. On the one hand the demand must increase until every town and village can have the services of the instructed nurse as readily as of the physician; on the other hand the profession of the nurse as well as of the physician is making advancement towards better education. There must be improvement in the training schools; an extension of the course of instruction to three years is already becoming general. This requiring longer service in the hospitals must make it better; and a final adjustment of the elements of the problem may be confidently expected that will be good and equitable for all concerned. It should be remembered that even now the training system is only at the beginning of its establishment as an essential part of the organization of hospitals for the insane. There is yet much to learn in developing the best methods.

The introduction of the new system of training

nurses in our hospitals for the insane is so recent that hardly more than fifteen years ago it was generally regarded as impracticable. It is not to be wondered at that there is yet a very inadequate appreciation in "the nursing world" of the peculiar value of this training, and what it does for the nurse. It is quite the fashion to minimize the qualifications of the nurses trained in the care of the insane and to argue that in these hospitals it is possible or proper to undertake to teach only the special form of nursing required in them. It sounds well theoretically to say that the foundation of a nurse's instruction should always be laid in a general training, and that afterwards the "specialties" should be added, by having, for example, the general hospital graduate go to a lying-in hospital for a short term of post-graduate study and in like manner to a hospital for mental diseases. But experience has given an emphatic answer to this proposition as respects the nursing of the insane. The simple fact is that those once trained in bodily nursing in general hospitals very rarely have any interest in mental nursing. In a certain way they are led to dislike it, for the reason that it is less objective, and there seems to the general nurse to be little to do for a patient who has no appreciable bodily ailment. The only way in which the hospitals for the insane can get a sufficient supply of nurses is by training them from the beginning of their studies; and the only way to give this training a value that will cause it to be sought by competent persons is to make it include all that is possible of general nursing. The results are so good for nurses who receive only the education thus afforded that they prove to be acceptable and successful, not only in "mental cases," but in medical cases generally. The fact that they do not profess

to be surgical nurses is no more a reason for denying them full recognition as trained nurses than there would be for insisting that all physicians must be surgeons also to entitle them to professional standing. Such a nurse often supplements her training by terms of service in a general hospital, a lying-in hospital, or in other special work. The results are so satisfactory, under all these circumstances, that there must be some fallacy in the dictum too often made that such an order of education is all wrong. The error evidently lies in the assumption that the word "general," as indicating the scope of the work of general hospitals, has the same wide meaning with respect to an education in general nursing, as it is taught in such hospitals. The implication is that such a training is complete in itself by including all that is elementary and preparatory which can be regarded as useful and desirable. The answer to this assumption is that the general hospital courses of training, as they have been constituted so far in their developmental stage, can be improved by extension at both ends. Certain preparatory acquirements would have an essential value in the education of every nurse for the best that is in her profession; this preliminary education is now crowded out by the too early demand in the general hospitals for applied knowledge of the mechanical operations of nursing; and the pupil nurse passes over too lightly, among other things, the values of her personal relation to the individual patient.

The truth is that there are "sick" people enough in large hospitals for the insane to afford sufficient practical work for training in the general principles and manipulations of nursing; this, with the didactic teaching, which can be practically the same as in a general hospital, lays a good foundation of an educa-

tion in the principles of the art of nursing. Such a course does not differ in practical effect from the method of the medical student who proceeds later to the application of principles in his special clinical studies. The true philosophy of the matter lies in the fact that work in mental nursing trains the woman; it is a most *general* and fundamental training of character, self-control, and the Christian graces. It is the practise, which has a formative influence of inestimable value, of consideration of the thoughts and feelings of others. A nurse of large experience in mental nursing, after a term of service in a general hospital, was asked what the difference was between the two kinds of nursing. She answered: "In a general hospital the patient must please the nurse; with the insane the nurse must please the patient."

The value of the work of a nurse lies largely in many cases, and almost wholly in others, in the personal relation of the nurse to the patient. The nurse experienced in mental nursing has acquired an education of her personality that better fits her for getting on with all people sick or well; it is proceeding from the *general* to the *special* when she enters upon the more particular application of principles in the practical details of general nursing. The didactic and class instruction can be made to meet the requirements very completely even where the work of mental nursing predominates; and it is also proceeding from the general to the special in this regard for the application of principles in bodily nursing, to come later in the order of the course of instruction.

It is fair to say that experience in mental nursing is absolutely necessary before one is qualified to form a just estimate of its requirements and educational value, and of the true place it is entitled and

destined to hold in the more perfect methods of training which all are striving to attain.

Information may be found in the following pages by those who wish to apply for admission to the school; the course of instruction is given, with the general order of exercises and the subjects of the lectures.

EDWARD COWLES,

Medical Superintendent.

MCLEAN HOSPITAL TRAINING SCHOOL FOR NURSES, WAVERLEY, MASS.

The Trustees of the Massachusetts General Hospital Corporation, having established at the McLean Hospital a School for Nurses, offer to give to men and women desirous of becoming professional nurses a two years' course of training in general nursing, with special reference to the care of cases of nervous and mental disease. The Training School is conducted by the Superintendent of the Hospital, under the authority of the Board of Trustees.

Those wishing to receive such a course of instruction must write to the Superintendent of the McLean Hospital, Waverley, Mass., giving a brief personal history and also the names and addresses of three responsible persons who know of their good character and capabilities. If it is then thought advisable for such prospective candidates to make a formal application, blank forms especially provided for this purpose will be sent to them.

Candidates must be in sound health, and must send with their application a certificate from a physician certifying to the fact. The most desirable age is from twenty-one to thirty-five years.

Upon the recommendation of the Superintendent of the Hospital and the approval of the Trustees, they will be received for two months on probation, at the expiration of which time they will, if accepted, sign an agreement to complete the prescribed course of two years.

The nurses are subject to the rules of the Hospital.

Their fitness for the work and the propriety of retaining or dismissing them at the end of the two months of trial are determined by the authorities in charge of the School, under the direction of the Trustees.

At the end of the first six months the record of each pupil is again carefully scrutinized and the right is reserved to terminate then, or at any other time, the connection of any pupil or nurse with the School and Hospital for inefficiency, misconduct, generally unsatisfactory record, or for any other reason which may be deemed sufficient.

All nurses are required to be sober, honest, truthful, trustworthy, punctual, quiet, orderly, cleanly, neat, patient, kind, and cheerful.

Instruction is given by the officers of the Hospital. The course includes the general care of the sick; the managing of helpless patients in bed, in moving, changing bed and body linen, making of beds, etc.; giving baths, keeping patients warm or cool, preventing and dressing bed sores; bandaging, applying of fomentations, poultices, and minor dressings; the preparing and serving of food, the feeding of helpless patients and those who refuse food; the administering of enemas and use of the catheter; attendance upon patients requiring diversion and companionship; the observation of mental symptoms, delusions, hallucinations, delirium, stupor, etc.; and the care of excited, violent, and suicidal patients.

They are also given instruction in the best practical methods of supplying fresh air, and of warming and ventilating sick-rooms in a proper manner, and are taught to take proper care of rooms and wards, to keep all utensils perfectly clean and disinfected, etc.; to observe the sick accurately in regard to the state

of secretions, pulse, breathing, skin, temperature, sleep, appetite, effect of diet, of stimulants, and medicine; the giving of massage, and the managing of convalescents.

Instruction is also given in the modern methods of physical training, by the use of free movements and the usual apparatus, in a gymnasium provided for the patients. The nurses assist in the medical application of physical exercise. Each nurse is required to have a gymnasium costume, the material for which will be furnished, at moderate cost, by the Hospital.

Written examinations take place at the middle and end of each school year, and pupils must attain on critical marking at least sixty per cent.

Instruction by text books and lectures is given for eight months of the year, from October 1 to May 31, but accepted candidates enter the School whenever vacancies occur. They are usually taken in the order of acceptance, though some can anticipate this time and enter with less delay, if they are so situated as to be able to have their names placed on the emergency list. It is no disadvantage to enter the School between May and October, as the pupil gets some practical knowledge of the care of patients before taking up the study required by recitations and lectures.

There is no fixed date for graduation. On completion of the full term of two years, nurses who have passed all the required examinations receive diplomas certifying to their period of training, their proficiency, and good character.

The pupils reside in the Hospital and are employed as assistant nurses in its wards. The men are paid twenty dollars (\$20) per month during the first year, and twenty-three dollars (\$23) per month during the

second year. The women are paid twelve dollars (\$12) per month during the first year, and fifteen dollars (\$15) per month during the second year. Their education during this time is a valuable addition to the compensation for their services.

Most graduates engage in private nursing or accept positions of trust in other institutions. Some are invited and prefer to remain in the service of this Hospital. Men graduates of this School are paid twenty-seven dollars (\$27) per month during the first year, and thirty dollars (\$30) per month thereafter. Women graduates of this School are paid twenty-five dollars (\$25) per month during the first year, and thirty dollars (\$30) per month thereafter. Graduates of this School, who are also graduates of the Training School for Nurses at the Massachusetts General Hospital in Boston, are paid thirty-five dollars (\$35) per month.

The women probationers while on duty are expected to dress plainly and neatly in a cotton gown, and are permitted to wear, of the regular uniform, only the cap and apron. The men wear ordinary plain clothing. After formally joining the School, at the end of the period of probation, both men and women are required to wear the Hospital uniform at all times while on duty in the wards.

Women graduates of this School who wish to have additional practical experience and instruction in general nursing, have the privilege, under certain restrictions, of entering the Training School for Nurses at the Massachusetts General Hospital in Boston. Such graduates will, after one year's satisfactory study, receive the diploma from that School, in addition to the diploma received from the McLean Hospital Training School.

COURSE OF INSTRUCTION.

Junior Year:

- | | |
|--|--------------------|
| Physiology and Hygiene (to the Nervous System) . . . | <i>Hutchison.</i> |
| Fever-Nursing | <i>Wilson.</i> |
| A Text-Book of Nursing | <i>Weeks-Shaw.</i> |
| What to do First in Emergencies | <i>Dulles.</i> |
| Practical Instruction in Massage (twelve lessons). | |
| Physical Training (thirty lessons). | |
| Practical Instruction in Cookery; for women, each morning for one month; for men, ten lessons. | |
| Instruction in the Wards by the Superintendent of Nurses, Supervisor, and Head Nurses. | |
| A Lecture each week. — Assistant Physicians. | |

Senior Year:

- Physiology and Hygiene (completed) *Hutchison.*
A Text-Book of Nursing (completed) *Weeks-Shaw.*
A Hand-Book of Obstetrical Nursing *Fullerton.*
How to Care for the Insane *Granger.*
Physical Training (thirty lessons).
Practical Instruction in Massage (ten lessons, men).
Instruction in the Wards by the Superintendent of Nurses, Supervisor, and Head Nurses.
A Lecture each week. — Superintendent.

ORDER OF EXERCISES.

Monday.**MEN.**

4.00 P. M. Junior Class, Recitation.

Tuesday.

2.45 P. M. Junior Class, Massage.

4.00 P. M. Senior Class, Lecture.

Wednesday.

2.45 P. M. Senior Class (2d Div.), Massage.

4.00 P. M. Junior Class, Lecture.

6.30 P. M. Senior or Junior Class, Instruction in Physical Training.

Thursday.

11.00 A. M. Junior Class (1st Div., six lessons), Bandaging.

2.45 P. M. Senior Class (1st Div.), Massage.

4.00 P. M. Senior Class, Recitation.

7.00 P. M. Junior Class (2d Div., six lessons), Bandaging.

Friday.

11.00 A. M. Junior Class (in Divisions of six, from February 3), Care of Sick Patients in Bed, Poulticing, etc.

2.00 P. M. Senior or Junior Class (Div. of eight), Instruction in Cookery.

Saturday.

3.00 P. M. Senior or Junior Class, Instruction in Physical Training.

Monday.**WOMEN.**

9.00 A. M. Junior Class, in Divisions of two for one month each (every morning in the week), Instruction in Cookery.

4.00 P. M. Senior Class, Recitation.

7.00 P. M. Junior Class (1st Div.), Recitation.

Tuesday.

2.00 P. M. Senior Class (Div. of six), Poulticing, Bandaging, Drugs, etc.

4.00 P. M. Senior Class, Lecture.

Wednesday.

11.00 A. M. Junior Class (2d Div.), Recitation.

4.00 P. M. Junior Class (Div. of six), Instruction in Physical Training and Massage.

Thursday.

11.00 A. M. Head Nurses, Review, etc.

4.00 P. M. Junior Class (Div. of six), Instruction in Physical Training and Massage.

Friday.

4.00 P. M. Junior Class, Lecture.

Saturday.

4.00 P. M. Junior Class (Div. of six), Care of Sick Patients in Bed, Poulticing, etc.

7.00 P. M. Junior Class (Div. of six), Instruction in Physical Training and Massage.

SUBJECTS OF LECTURES.

JUNIOR YEAR.

- TWO. — The skeleton: skull, thorax, pelvis and spinal column, general anatomy and physiology; a consideration of the more common injuries to which they are liable.
- THREE. — Surgical landmarks: prominent points of the skeleton [demonstration on a subject]. Fracture and repair of bones. The joints; sprains, dislocations, etc.
- ONE. — The muscles: general anatomy and physiology. Paralysis, rigor mortis, etc.
- THREE. — The blood: its functions, coagulation, etc. The heart and blood vessels. The pulse; information to be gained from it; causes of variation in rate, strength, etc. Diseases of the circulatory system.
- TWO. — Hæmorrhage: varieties, — epistaxis, hæmoptysis, from various parts of the alimentary canal, post partum, apoplexy, etc. Symptoms of serious hæmorrhage; various means of stopping it. Demonstration on a subject of location of blood-vessels and methods of applying pressure.
- TWO. — Respiration: organs and mechanism of; effect of various diseases; asphyxia; artificial respiration [demonstration on a subject].
- ONE. — Suicide: causes, means, etc. Care of suicidal patients.
- ONE. — Animal heat: its source, regulation, change in disease, and methods of ascertaining and recording.
- ONE. — The use of heat in the treatment of disease; sources and the effects obtained; baths general and local, poultices, fomentations, etc.
- TWO. — The use of cold in the treatment of disease; sources and effects. Fever; methods of reducing high bodily temperature.
- TWO. — Pathogenic germs; contagious diseases; disinfectants and disinfection.
- THREE. — Consideration of some common acute diseases.
- ONE. — Various diseases of which dropsy is a symptom.
- FIVE. — Effect of states of mind on the body; mind cure, etc. Drugs and medicines; methods of administration; circumstances that modify their ordinary effects.
- TWO. — Surgical nursing.
- TWO. — Charts and records. Practical hints.

SENIOR YEAR.

ONE. — The history of hospitals.

ONE. — The history of nursing.

ONE. — Duties of the nurse.

ONE. — General care of patients. Personal hygiene.

ONE. — Hospital housekeeping.

ONE. — Heating and ventilation.

TWO. — The nervous system.

ONE. — The special senses.

ONE. — Reflex action of the nervous system.

FOUR. — Mental faculties and their disorders.

ONE. — Common sensations and their disorders.

ONE. — Nervous exhaustion and its nursing care.

ONE. — Nature and causes of insanity.

ONE. — Hypochondriasis. Eccentricity.

TWO. — Fixed ideas. Hysteria.

THREE. — Melancholia and mania. The duties of the nurse in the care of these conditions.

ONE. — Dementia, and the care of patients in its various forms.

ONE. — Delusional insanity; its various forms.

ONE. — Epilepsy and convulsions.

ONE. — General paralysis.

ONE. — Writing notes of mental symptoms.

THE EIGHTY-SIXTH ANNUAL REPORT FOR THE YEAR 1899.

The committee appointed by the Trustees to prepare the Annual Report to the Corporation of the Massachusetts General Hospital have the honor to submit the following as the text therefor.

For convenience, the three major departments of the Hospital are designated as the General Hospital, the McLean Hospital, and the Convalescent Home.

THE GENERAL HOSPITAL, IN BOSTON.

The administration of the General Hospital has been most successfully accomplished by Dr. Herbert B. Howard, Resident Physician. The Trustees note with satisfaction Dr. Howard's continued inclination and ability to contrive methods for a more economical and a more efficient rendering of hospital service ; and they acknowledge the very great aid they have received from him in the preparation and execution of plans for the improvement and the extension of the Hospital plant.

A summary of the financial exhibit for the year for this department, with that for 1898 added for comparison, is as follows : —

	1898.	1899.
Expenses	\$173,763.39	\$186,947.60
Charges to patients	66,774.19	70,037.65
Cost of free patients	\$106,989.20	\$116,909.95
Income from various funds and free-bed subscriptions	106,120.57	103,389.52
Net deficit charged to General Fund	\$868.63	\$13,520.43

The income from various funds and free-bed subscriptions shows a decrease of	\$2,731.05
The charges to patients show an increase of . .	\$3,263.46
The expenses of administration show an increase of	\$13,184.21
The average number of patients shows an increase of	8

With reference to the foregoing statement of net deficit, it should be noted that it makes no allowance for an increase of \$4,040.29 in the value of stock on hand. If this were done, the net deficit would be \$9,480.14.

The total number of patients treated during the year was 5,086, against 5,053 in 1898 ; and the average number in the Hospital was 261, against 253 in 1898.

The number of free patients treated during the year was 2,981, against 3,010 in 1898, and the number of patients paying in whole or in part was 2,105, against 2,043 in 1898.

The average cost per week was \$13.74, against \$13.16 in 1898.

The number of out-patients (new cases) treated during the year was 31,003, against 28,741 in 1898. This service involved 104,205 visits — a daily average of 340 — and the filling of 65,530 prescriptions.

The number of patients treated in the Accident Room during the year was 3,977, against 3,514 in 1898. Of this number 958 were retained in the Hospital.

The foregoing statistics show that in the treatment of nearly 40,000 patients the service of the Hospital in every department has exceeded that of any prior year of its history. As to house-patients, statements in the annual report of the Resident Physician fully justify his conclusion that, "*It would seem as though we should never attempt to admit cases faster than during the past year, until the number of beds has been increased.*" It is evident, therefore, that only by the receipt of liberal contributions for the erection of additional ward buildings can the Hospital be

enabled to meet constantly increasing demands for house treatment.

In 1855 the average length of time of the stay of free patients was eighty-one days. The corresponding time for paying and free patients during 1899 was nineteen days. In connection with this subject, it should be noted that since the establishment of the Convalescent Home there have annually been transferred thereto from the General Hospital numbers of patients who otherwise would not have been discharged. For the purpose of a fair comparison, it is therefore necessary to combine the statistics of both departments, with a resulting average length of time of stay during 1899 of twenty days. In other words, 261 beds at the General Hospital and 31 beds at the Convalescent Home, or a total of 292 beds, are to-day doing the work which would have been done by 1,182 beds forty-five years ago. The beneficent results to which these figures bear witness may fairly be attributed to improved medical and surgical practice, stimulated and supported by the marvellous powers of ether and asepsis.

The reader who is interested in details of the year's professional work at the General Hospital will find on pages 94 to 146 (inclusive) of this volume complete technical statistics thereof, under the titles Medical Diseases, Surgical Diseases, and Surgical Operations.

During the year, Dr. Reginald H. Fitz, Visiting Physician, and Dr. Elliott P. Joslin, of the Clinical-Pathological Laboratory, have made an exhaustive investigation of "Diabetes Mellitus at the Massachusetts General Hospital." In connection with this work, Dr. Joslin has determined the number of medical and surgical cases treated at the General Hospital from its opening to the present time, and

has made a tabular and a graphical record thereof which are published at page 76 of this volume. These records will doubtless be of great interest and value to investigators of many other subjects. Indeed, they make evident even to the lay observer the interesting fact that, since the opening of the Hospital in 1821, there has been a constant tendency toward a superior growth of its surgical work ; and that this growth has been marked by three periodic accelerations, beginning with the discovery of ether in 1846, the outbreak of the Civil War in 1861, and the general use of aseptic methods in 1884. They also disclose the fact that — so far as the Hospital is concerned — the Civil and the Spanish wars may be designated, respectively, as *surgical* and *medical* wars.

After thorough discussion with the Visiting Surgeons and the Resident Physician, the Trustees have adopted important changes in their rules with reference to the organization and duties of the Out-Patient and Visiting Surgeons' Staffs and the conduct of the Accident Room service. It is believed that these changes will add to the efficiency of the Hospital, and afford substantial relief to the heretofore over-worked surgeons in its several departments.

The matter of substituting an electric automobile for the horse ambulance now in use has been referred to a committee for consideration and report.

The Trustees have determined that hereafter the Hospital will assume the expense of republishing and distributing the reports of the Clinical Meetings of the Staff. They have also made an appropriation for the immediate publication of the results of important investigations in Clinical Pathology during the ensuing year.

The report of the Treadwell Library notes the

WIDAL TEST WITH TYPHOID BACILLI.

accession of 276 volumes during the year ; and a total of 5,251 volumes on hand January 1, 1900.

The third annual report of Dr. J. H. Wright, Director of the Clinical-Pathological Laboratory, published at page 80 of this volume, will doubtless be of interest to the lay as well as to the professional reader. It clearly demonstrates the increasing importance of the laboratory to the general work of the hospital — indeed, it is not too much to say that in connection therewith this laboratory is a veritable “clearing house,” the certificates of which are frequently valuable additions to the medical and surgical sciences.

Dr. Wright’s plea for additional laboratory space has been met by a recent appropriation of \$2,500 made by the Trustees for the establishment of the chemical department in the adjoining upper story of the new heat, light and power house ; and for the conversion of the room now occupied by that department into a model plant for the pursuit of the art of photomicrography by means of which are established permanent records of many of the most interesting and valuable results of laboratory research.

For obvious reasons, a high-power photo-micrograph can have but little meaning to the lay observer ; but the two figures of the accompanying plate, illustrating the “Widal test” for typhoid fever, will doubtless enable every reader of this report to appreciate the extreme value of laboratory research in connection with the clinical diagnosis of disease. An ultra popular method of explaining these figures would be the likening of No. 1 to a poultry yard, over the whole area of which numerous fowls are diligently searching for food ; and No. 2 to the same yard and its occupants as affected by a few handfuls of corn thrown to

various points within its area. In the latter case it is obvious that eagerness for their favorite food has induced the fowls to come together in isolated groups or clumps.

The scientific description of the Widal test and of the figures is as follows: The test depends upon the fact that the blood of a typhoid-fever patient, when mixed with a culture of typhoid bacilli, will cause the bacilli, which are normally in active motion, to cease their motion and to aggregate in groups. This laboratory operation is of great value in practical medicine, because it enables the physician to make a definite diagnosis in many cases of fever in which the symptoms are not those of typical typhoid. The test is illustrated by the accompanying photomicrographs.

Figure 1 shows typhoid bacilli swimming in a thin film of bouillon as seen under a magnification of 500 diameters. They are separate from one another and are moving about in the fluid, propelled by minute filaments (here invisible) which protrude from their bodies.

Figure 2 shows the effect of mixing a drop of the blood of a typhoid-fever patient with a bouillon culture of the typhoid bacillus. The bacilli have ceased their motion and have gathered together in groups.

Since the beginning of the year 1898 the Trustees have given much attention to the problem of an ultimate rearrangement and extension of the General Hospital plant. As this plant is the result of gradual and erratic growth during the last eighty-one years, it is not surprising that much must be done to bring it up to the requirements of modern medical and surgical practice, and economical methods of business administration. Several of the ward buildings were

designed and built as temporary structures, under the belief that after a few years' service they would become "hospitalized" and useless. Meantime, however, the extraordinary results of aseptic methods have proved conclusively that — with proper precautions in its design, construction, and use — the life of a hospital building should be limited only by the life of its structural parts. Block plans have been prepared covering the present needs and the most desirable growth of the Hospital plant for many years to come. While the immediate realization of all these plans would call for expenditures far beyond the present resources of the Corporation, it is believed that the public will be stimulated to a beneficent interest by knowledge of the fact that future expenditures for buildings will be controlled by comprehensive plans for the establishment of a permanent and perfect hospital plant.

In accordance with a vote of the Trustees passed July 19, 1898, an improved plant for the generation of heat, light, and power has been installed in a new building on the Allen-street boundary of the Hospital grounds. From this plant heat, light, and power are now supplied most satisfactorily to the General Hospital and to the Massachusetts Eye and Ear Infirmary, under an agreement which ensures to each institution a substantial saving over the fixed charges and operating expenses of two independent plants for similar service.

At the beginning of the year 1899 the financial statement of the Treasurer did not encourage projects which involved large expenditures for any of the departments of the Hospital. Nevertheless, the Trustees were convinced that something should be done toward enabling the General Hospital plant to

meet the reasonable requirements of the best modern medical and surgical practice. Bearing in mind the extreme importance of restricting the plans therefor to those things which were most urgent, it was unanimously decided to erect forthwith a new Operating Building, an addition to the Thayer Building or Nurses' Home, and a new Domestic Building.

The amphitheatre now in use for operations, in the light of aseptic surgery is in its construction and its surroundings in many vital respects unfit for the purposes for which it was built. That the reputation of the Hospital has not suffered by reason of its use is perhaps the strongest tribute that can be paid to the efficiency of the Surgical Staff ; but it is believed that the members thereof have reached the limit of endurance under the difficulties with which they have to contend, and that they and their patients are fairly entitled to the relief which the new building will ensure. The need for an addition to the Thayer Building is equally pressing, by reason of the fact that there is an immediate demand for the housing of the forty nurses who must be added to the present staff in order that it may render improved hospital service.

That a new Domestic Building is absolutely essential, from a business point of view, is evident from the fact that in the opinion of experts it will effect an annual reduction in the expense account of at least \$10,000 — a sum which will much more than offset the interest on the cost of the proposed building and its equipment. This building provides for new kitchen, dining-rooms, store-rooms, apothecary shop, cold-storage plant, bed-rooms for domestic servants, etc., etc.

On July 21, 1899, final plans, specifications, and esti-

mates for the three buildings above mentioned, as prepared by Messrs. Wheelwright & Haven, Architects, and unanimously endorsed by the Surgical Staff, were approved by the Trustees. The work of construction has since that date been carried on with great activity by Messrs. Connery & Wentworth, Builders, whose contract calls for the finishing of the Thayer Building addition and the Operating Building on or before Oct. 1, 1900, and the Domestic Building on or before Feb. 1, 1901.

The total cost of the new work (including the heat, light, and power plant) will be about half a million dollars. The Trustees have gone somewhat into details connected with it, in the hope and belief that the Corporation will recognize the wisdom and the necessity of this large expenditure.

In connection with this subject, it is proper to state that the comprehensive plans for the perfection of the General Hospital plant include a new Administration Building, a new building for the Out-Patient Department, and a new Ward Building. As designed, these buildings form three sides of a quadrangle, the fourth side being open so as to afford an uninterrupted view of the central Administration Building from North Grove Street. The estimated cost of these buildings is between four and five hundred thousand dollars — the latter sum providing for considerable architectural effect. Any one of them would add immensely to the efficiency of the Hospital, and would be a worthy memorial of a liberal donor; and a gift of the entire group would be an act of truly noble munificence.

Further valuable additions to the General Hospital plant are now under consideration, and the Trustees make grateful acknowledgment to the generous donors

who have tendered specific gifts therefor. Dr. Charles G. Weld has offered a new ward building, to contain about twenty beds for the treatment of skin and other diseases in connection with the Out-Patient Department; and Dr. Arthur T. Cabot, Visiting Surgeon, believing it to be of the greatest importance that the house officers should have an opportunity for daily exercise, and that hand-ball courts would afford this opportunity in the best and most attractive way, has presented his check for a thousand dollars in the hope that suitable courts may be arranged in connection with the new buildings already provided for.

On March 31, 1899, Miss Pauline L. Dolliver was appointed Superintendent of Nurses, *vice* Miss Maria B. Brown, resigned.

On June 9, 1899, the resignation of Dr. Harold C. Ernst, as Physician to Out-Patients, was accepted. Dr. Ernst, in his letter of resignation, remarked: —

My duties as Professor of Bacteriology at the Harvard Medical School, and my withdrawal from the practice of medicine, make it impossible for me to do justice to the requirements of the Out-Patient service as its best interests appear to demand.

On July 21, 1899, Dr. Henry F. Hewes was appointed Physician to Out-Patients.

On September 29, 1899, Dr. Howard T. Swain was appointed Assistant Resident Physician, to succeed Dr. Frederic A. Washburn, Jr., who, on July 1, had resigned that office in order to accept an appointment as Surgeon in the Volunteer Army for service in the Philippine Islands. Dr. Washburn had discharged his duties with great tact and fidelity, and carried with him the best wishes of the Hospital Staff.

At the close of the year Dr. Oliver F. Wadsworth tendered his resignation as Ophthalmic Surgeon to

Out-Patients, and in accepting it the Trustees expressed their thanks for his valuable services, and appointed him a member of the Board of Consultation of the Hospital.

At the same time Dr. John Homans tendered his resignation as Visiting Surgeon, and the Trustees unanimously adopted the following resolution offered by the Chairman:—

In accepting the resignation of Dr. John Homans, as Visiting Surgeon, the Trustees would express their sense of the great value of his services to the Hospital as Surgeon to Out-Patients from 1876 to 1882, and as Visiting Surgeon from 1882 to 1899, when his term has expired by limit of age.

Through the whole period of his connection with the Hospital, Dr. Homans' service has been rendered with promptness and fidelity. The intercourse between him and the officers of the Hospital has always been of the most agreeable nature.

But, besides the faithful performance of his regular duties, Dr. Homans has advanced to its present point the whole treatment of abdominal surgery; and by his skill, courage, and unselfish devotion has added to the reputation of the Massachusetts General Hospital and the welfare of mankind.

And it was thereupon

Voted, That Dr. John Homans be, and he hereby is, made a member of the Board of Consultation of the Hospital; and, in consideration of his conspicuous services to humanity and this Hospital, he be offered the use of two beds in the surgical wards, until the further order of this Board.

THE CONVALESCENT HOME, IN WAVERLEY.

The Convalescent Home has been conducted satisfactorily by Miss Alice Scott, Matron, under the superintendence of the Resident Physician of the General Hospital.

A summary of the financial exhibit for the year for this department, with that of 1898 added for comparison, is as follows:—

	1898.	1899.
Expenses	\$9,727.84	\$9,867.40
Charges to patients	2,192.31	3,231.25
Cost of free patients	\$7,535.53	\$6,636.15
Income from Convalescent Home Fund	6,552.90	6,552.90
Net deficit charged to General Fund	\$982.63	\$83.25

The total number of patients treated during the year was 474, against 442 in 1898; and the average number in the Home was 24, against 26 in 1898.

The main building has been thoroughly repaired and painted on the outside, and has been equipped with an efficient steam-heating plant in place of the old and inefficient hot-air furnace. During the ensuing year a moderate sum should be expended for repairs to the interior of the main building and for general repairs to the stable.

THE MCLEAN HOSPITAL, IN WAVERLEY.

The administration of the McLean Hospital has been accomplished by Dr. Edward Cowles, Medical Superintendent, with remarkable professional skill. Although the net deficit charged to the General Fund is \$4,577.21 greater, it should be noted that the income from various funds is \$4,656.25 less than it was in 1898. The Superintendent is hopeful that there will be a decided improvement in the financial results of the ensuing year.

A summary of the financial exhibit for the year for this department, with that of 1898 added for comparison, is as follows:—

	1898.	1899.
Expenses	\$218,673.60	\$222,777.56
Charges to patients	186,769.92	191,952.92
Cost of free patients	\$31,903.68	\$30,824.64
Income from various funds	16,455.44	11,799.19
Net deficit charged to General Fund	\$15,448.24	\$19,025.45
The income from various funds shows a decrease of	\$4,656.25	
The charges to patients show an increase of	\$5,183.00	
The expenses of administration show an increase of	\$4,103.96	
The average number of patients shows an increase of	2	

With reference to the foregoing statement of net deficit, it should be noted that the current expense account includes items to the amount of \$4,878.12 which might be charged fairly to new construction. If this were done the net deficit would be \$14,147.33.

The total number of cases treated during the year was 291, against 299 in 1898; and the average number of patients in the Hospital was 157, against 154 in 1898.

The average duration of illness from the beginning of attack in all cases recovered was 9.51 months, and the average duration of their residence in the hospital was 5 months.

The average cost per week was \$27.06, against \$26.84 in 1898.

Dr. Cowles' long service to the Hospital covers sixteen years of brilliant professional and financial success at Somerville; the inception, construction, and occupation of the magnificent plant at Waverley; and four years' administration thereof under conditions which have, for unavoidable reasons, produced large annual financial deficits. A transfer of the Hospital from a compact block of buildings at Somerville to what may fairly be described as a series of isolated country mansions widely separated within the limits of a park-like area of a hundred and eighty acres, with costly underground connecting corridors, and more than three miles of surface roads and paths, has doubtless added greatly to the welfare of the patients; but it has at the same time made a very substantial increase in the necessary current expenditures of the institution. Moreover, this natural increase has been supplemented by large extraordinary expenditures for the correction of original faults in the construction of the buildings; and for the maintenance of the steam-heating plant, the return pipes of which, at the end of only four years' service, were found to be practically destroyed by

corrosion. This latter disaster remained unexplained until the end of the year, when, in response to the request of the Committee on Buildings and Repairs, the Chemical Department of the Massachusetts Institute of Technology, by elaborate scientific investigation, determined that it was due to carbonic acid in the feed water drawn from springs on the premises. At the same time they suggested that the acid could be restrained from passing off with the steam by adding to the feed water, before it enters the boilers, a small quantity of an alkali — preferably caustic soda. At the next meeting of the Trustees it was

Voted, That the Secretary be, and he hereby is, requested to convey the thanks of the Trustees to the President of the Massachusetts Institute of Technology for the very valuable service rendered to the Massachusetts General Hospital by the staff of the Chemical Department of said Institute by their determination of the cause of the rapid and destructive corrosion of the steam-heating pipes at the McLean Hospital, and their suggestion of a practicable remedy therefor.

The results of this investigation are of very great pecuniary value to the Hospital, for the reason that they render unnecessary the pursuit of a prior plan to substitute brass for iron pipe throughout the system at an estimated cost of about \$10,000.

The fact that the expenditures for heat, light, power, and repairs amounted to \$56,765.37 for the year indicates the importance of purely mechanical affairs in the administration of the Hospital.

An important addition to the plant has been made by the building and equipment of a hydropathic department in the basement of the women's gymnasium at a cost of about \$10,000. Its therapeutic value has already been demonstrated by the daily treatment of nearly thirty patients of both sexes ; and Dr. Cowles recommends that it be made still more useful by the addition of an inexpensive apparatus for the medical application of static electricity.

“Meadow Spring,” in front of the East House, which has in past years supplied about a third of the water used by the Hospital, has been enlarged and deepened, with a resulting large increase in its yield. The expenditure of \$550 for this purpose was justified by the fact that, owing to the dry season, \$2,655.38 had been paid for water from outside sources.

Plans have been adopted for the immediate building of a side track and a coal trestle on the Hospital land adjacent to the Boston & Maine Railroad, to the end that hereafter the annual coal supply of about 6,000 tons may be bought and received under the most favorable conditions. The wisdom of this provision is apparent from the fact that the coal famine of the present season has obliged the contractors to abandon their contract, with a resulting loss to the Hospital of a sum at least equal to its cost. Still stronger than the economic reasons in favor of this investment is the fact that, under certain conditions, a failure of the coal supply might endanger the lives of the four hundred inmates of the Hospital.

The Medical Superintendent, in his annual report, at page 152 of this volume, makes an earnest appeal for the building of the Samuel Eliot Memorial Chapel, the fund for which has been increased to \$29,000 by an additional gift from its munificent founder. In their report for last year the Trustees stated that “the chapel is to be built when the fund, with such additions as shall be made thereto by others, is, in the opinion of the Trustees, sufficient in amount for the building and its maintenance.” Meantime, Mr. R. Clipston Sturgis, Architect, has made a voluntary offer of plans therefor which will doubtless serve to awaken the interest of all persons who wish to promote the building of the Memorial Chapel, as well as

those who wish to provide the Hospital with what is otherwise proposed in the plans. In addition to the chapel, these plans include an accessory vestry-like structure (for art-room, photograph library, etc.), connected by an arcade with a building for a winter garden. The several buildings of the group enclose a level rectangular lawn suitable for various games ; and the plant, as a whole, is admirably designed to meet, in a most attractive way, many of the peculiar needs of the patients. These buildings, from their proposed site, — to the right of the main avenue leading to the Administration Building, — will command a superb view, and will add much to the architectural effect of the general plant of the Hospital. A fund of at least \$150,000 will be required for their construction and endowment.

Having regard to the financial resources of the Corporation and the pressing demand for an additional hospital building on the women's side, the Trustees are of the opinion that the Chapel Fund should not take precedence in the minds of the general public ; nevertheless, to such persons as are particularly interested therein, and not otherwise inclined to contribute to the clinical needs of the Hospital, the Trustees do most heartily recommend its establishment.

At a meeting of the Board held April 14, 1899, the death of Dr. Albert E. Loveland was announced and the following minute adopted : —

The Trustees of the Massachusetts General Hospital desire to place on record an expression of their appreciation of the high promise of excellence of professional work shown by Dr. Albert E. Loveland during the few months of his service as Junior Assistant Physician of the McLean Hospital ; of the personal qualities which had gained him the respect and affection of his associates and patients ; and of their regret at his sudden death so early in his career.

In his last quarterly report to the Trustees Dr. Cowles remarks : —

The medical work of the year has been especially interesting and successful. The diligence of the Staff in the lines of clinical work and study that are available for us, is surely laying the foundation for the professional credit which it is our aim to attach to the Hospital. Worthy results are the more certainly assured because of the conservative spirit with which the work is pursued.

THE MASSACHUSETTS GENERAL HOSPITAL.

The net deficit charged to the General Fund for all the departments was \$32,629.13 in 1899, against \$17,299.50 in 1898, an increase of \$15,329.63, which is largely due to the loss of income from real estate undergoing improvement.

The aggregate cost of free patients in all the departments was \$154,370.74. If this sum were increased by an allowance of 4% interest on the cost of land and buildings occupied by the Hospital, it would amount to \$256,107.18. These figures are *prima facie* evidence that the Hospital is a charitable institution ; and the Trustees are impelled to express their conviction that they are also *de facto* evidence, for the reason that they are the result of a most business-like and, at the same time, a most beneficent administration. Hospitals, in common with other charities, are constantly subject to demands for free service by persons who are quite able to pay wholly or in part therefor ; and indiscriminate admission would certainly lead to the exclusion of truly indigent patients. A system of preliminary investigation, practised with care and tact, has without doubt increased the charitable work of the Hospital.

During the month of May, 1899, His Excellency the Governor of the Commonwealth accepted the

resignation of Dr. Charles V. Bemis, and appointed Dr. John M. Harlow his successor as a Trustee.

Dr. Bemis had rendered faithful and efficient service to the Hospital during twenty-four consecutive years, and resigned on account of infirmities incident to advanced age. The Secretary was requested to inform Dr. Bemis of "the regret with which the Trustees have heard of his resignation, and the reasons for which he can no longer remain with the Board." It is a noteworthy fact that Dr. Bemis, during his twenty-four years' service as Committee on the Book of Donations, made record of gifts and bequests to the amount of \$3,487,109.99.

On Feb. 17, 1899, the thanks of the Board were voted to Mr. Blake for his privately printed compendium of the published History of the Massachusetts General Hospital, 1810-1872.

On June 9, 1899, the Trustees awarded two Dalton Scholarships, with an income of five hundred dollars each, for the year beginning September 15, 1900. In accordance with the recommendation of the General Hospital Staff these scholarships were awarded as follows:—To Frank J. Geib, M. D.: Subject, "The Metabolism of the Body in Compensated Lesions of the Heart." To William H. Smith, M. D.: Subject, "The Etiology of Pneumonia; a clinical, pathological, and bacteriological study of fatal cases."

The appended report of the Committee on the Book of Donations itemizes eighteen legacies, bequests, and donations to the Hospital during the year 1899. The total sum thus received was \$133,741.24, against \$913,834.10 in 1898.

During the year the Trustees, as conservators and administrators of the noble charity for the time being committed to their charge, have assumed a heavy

financial burden. While the reasons for this act are believed to be unanswerable, it is certain that they would not have prevailed if they had not been reinforced by a profound faith that the burden would be speedily lightened by a benevolent public, to whom an urgent appeal for relief is now made in the name of suffering humanity.

FRANCIS BLAKE,
MOSES WILLIAMS.

At a meeting of the Trustees held February 7, 1900, the foregoing report was submitted by the Committee and approved by the Trustees. It was thereupon

Voted, That the same be laid before the annual meeting of the Corporation, to be held this day.

Attest:

THOS. B. HALL,
Secretary.

DONATIONS.

The Committee on the Book of Donations reports that the following donations and legacies have been received during the year :—

1899.

January 9th. As residuary legatee under will of Henry L. Pierce	\$30,000.00
January 23d. Part of bequest of Anna S. C. Prince,	150.00
April 6th. Part of bequest of Thos. T. Wyman	50,000.00
April 25th. Bequest of Luther Farnum, to be called Luther Farnum Fund, income to Free Beds	1,993.25
April 25th. From Executors of the will of Otis E. Weld, \$1,000 and interest (unrestricted)	1,063.50
May 5th. Donation (giver unknown), to be added to the "Samuel Eliot Memorial Chapel Fund,"	2,000.00
May 10th. Donation of Francis Blake for a new microtome for the Pathological Laboratory	100.00
May 25th. Additional donation for microtome from F. Blake	12.00
June 9th. Part of bequest of Thomas T. Wyman (unrestricted)	4,720.41
June 15th. Part of bequest of Luther Farnum income to Free Beds	644.12
June 21st. Donation of Francis Blake for the new microtome for the Pathological Laboratory	154.30
July 11th. Bequest of Mrs. J. Huntington Wolcott, to be known as the J. Huntington Wolcott Fund, the income of which shall be forever devoted to Free Beds	25,000.00
July 22d. Part of bequest of Anna S. C. Prince	150.00
September 2d. Donation, through Dr. Maurice H. Richardson, to the Treadwell Library. (From a patient.)	200.00
September 5th. Bequest of Geo. A. Newell, to be called the George A. Newell Fund, income to Free Beds	5,000.00
October 5th. Part of bequest of William Hilton	5,053.66

October 19th. Donation of Ira C. Calef	\$5,000.00
December 27th. Donation of Edward A. Newell in honor of his father, to be called the George A. Newell Fund, income for Wooden Leg Fund .	2,500.00
	<hr/>
	\$133,741.24

and that these sums have been entered in the Book of Donations in the usual form.

JOHN M. HARLOW,
Committee on the Book of Donations.

MASSACHUSETTS GENERAL HOSPITAL,
Dec. 31, 1899.

REPORT OF THE TREASURER.

In accordance with the Fifth Article of the By-Laws, the annual report of the accounts of the Massachusetts General Hospital made up to the last day of December, 1899, is respectfully submitted, to be laid before the Corporation at its annual meeting.

Dr. FRANKLIN HAVEN, Treasurer, in account with the MASSACHUSETTS GENERAL HOSPITAL, Cr.

To Balance Cash on Hand, Dec. 31, 1898	\$147,581.40	By Cash paid Training-School for Nurses	\$616.19

 1899 = 5,371.

Examination of Accounts.

BOSTON, Feb. 19, 1900.

*To the Committee on Accounts,**Massachusetts General Hospital:—*

I hereby certify that I have examined the vouchers as per division books of the Convalescent Home, McLean and General Hospitals, for the year ending December 31, 1899, and I have found the same correct, and the amounts properly entered in the cash books.

I have examined the books of the Treasurer for the year ending December 31, 1899, as follows, viz.: the cash book, journalizings, and the trial balance, and I have found the same correct. I found vouchers for the cash payments, and I found cash in the banks as per amount called for by the Treasurer's cash book.

The balances on the Treasurer's books agree with the balances on the books at the McLean and General Hospitals.

I found bonds and stock certificates as per bond and stock accounts, and notes as per notes receivable account on the trial balance herewith.

WALDO L. ABBOTT.

THE ANNUAL REPORT OF THE RESIDENT PHYSICIAN OF THE GENERAL HOSPITAL, IN BOSTON.

The average number of patients in the Hospital during the year was 261.

Of paying patients, 1 paid \$75 ; 1 paid \$50 ; 75 paid \$35 ; 2 paid \$28 ; 1 paid \$24.50 ; 5 paid \$25 ; 1 paid \$39 ; 185 paid \$21 ; 1 paid \$17.50 ; 9 paid \$15 ; 21 paid \$14 ; 1 paid \$12 ; 709 paid \$10.50 ; 139 paid \$10 ; 5 paid \$8 ; 599 paid \$7 ; 1 paid \$7.50 ; 23 paid \$6 ; 1 paid \$5.50 ; 136 paid \$5 ; 28 paid \$5.25 ; 1 paid \$6.50 ; 21 paid \$4 ; 3 paid \$3.25 ; 8 paid \$3.50 ; 12 paid \$3 ; 3 paid \$2.50 ; 1 paid \$2.45 ; 13 paid \$2 ; 1 paid \$1.10 ; 1 paid \$1.

Whole number of patients treated during the year : paying, 1,882 ; paying part of the time, 223 ; free, 2,981 ; total, 5,086.

Proportion of deaths to whole number of results, 8 per cent.

There were 3,977 patients treated in the Accident Room.

Of this number, 958 were retained in the Hospital.

The greatest number of patients at one time was 284.

The least number of patients at one time was 236.

Total number of days for paying patients, 37,595 ; free, 57,670 ; total, 95,265.

Average time paying and free patients, 19— days.

Total number of days for patients at Convalescent Home, 8,760.

Average time paying and free patients for Hospital and Convalescent Home, 20+ days.

In spite of the many changes going on in the Hos-

pital during the past year, the average number of patients has been increased. The total number of admissions also has been increased somewhat. When it is taken into account that the year before the soldiers were treated in two large tents during the summer and fall months, and this year we have used a tent only to take the place of the Warren Ward during the time it was being moved, it will readily be seen that the wards of the Hospital have been very busy. In fact, they have been too busy for the best comfort of the patients. Serious cases, of course, are never disturbed, but the slighter and convalescent cases, when the wards are so crowded, have frequently to sleep on couches, or in the recovery room.

The pressure from outside to admit more cases has constantly increased. It would seem as though we should never attempt to admit cases faster than during the past year until the number of beds has been increased.

The changes going on, the general rise in prices, the increased number of operations (2,103 in 1898 to 2,432 in 1899), the increase in the number of people treated in the Accident Room and in the Out-Patient Department, account for the increase in the current expenses of the Hospital.

CHANGES DURING THE YEAR.

The corridor leading to the lower wards has been straightened out, a new operating building has been begun, also an addition to the Thayer Building. The old power plant and the domestic building have been torn down, and the place where these buildings stood has been excavated for the foundation of the new domestic building. The Warren Ward has been moved to make place for the operating building, and it has been renovated and connected with the corridor.

An iron bridge has been placed from the roof of the Out-Patient Department to the top story of the old Harvard Medical School, so that this could be used for employees of the Hospital while the changes are in progress.

Respectfully submitted,

HERBERT B. HOWARD,

Resident Physician.

TABLE No. 1.

Number of Patients in the Hospital Jan. 1, 1899.

Paying	101
Free	169
Total	270

Admitted from Jan. 1, 1899, to Jan. 1, 1900.

	<i>Male.</i>	<i>Female.</i>	<i>Total.</i>
Patients paying Board	1,167	651	1,818
Patients paying Board Part of the Time	127	96	223
Patients entirely Free	1,555	1,220	2,775
	<hr/> 2,849	<hr/> 1,967	<hr/> 4,816
Medical			1,808
Surgical			3,008
Children (included above)			348

Discharged during the Year.

	<i>Medical.</i>	<i>Surgical.</i>	<i>Male.</i>	<i>Female.</i>	<i>Total.</i>
Well	461	623	545	539	1,084
Much relieved	428	808	759	477	1,236
Relieved	435	1,164	982	617	1,599
Not relieved	118	78	116	80	196
Not treated	65	168	129	104	233
Dead	197	210	265	142	407
Insane and eloped	1	5	3	3	6
Against Advice	46	36	44	38	82
	<hr/> 1,751	<hr/> 3,092	<hr/> 2,843	<hr/> 2,000	<hr/> 4,843

During the year there were 104 more transferred from the medical side to the surgical side than from the surgical side to the medical side, which accounts for the seeming discrepancy above.

GENERAL HOSPITAL TRAINING SCHOOL FOR NURSES.

The Report of the Training School for Nurses for the year 1899 is herewith presented : —

At the beginning of the school year in September, the pupils were arranged, according to grade, to form two classes, with a separate course of lectures for each class. The senior class now has a membership of 26, the junior class, of 27, pupils. The senior pupils receive instruction in massage from Miss Olga Sandahl, and the practical demonstrations in cooking are still under the direction of Miss Mary A. Boland.

The offer of the Sloane Maternity Hospital of New York to receive 12 pupils each year for 3 months' obstetrical training gives opportunity to a portion of the pupils to obtain this necessary experience. It is most desirable that a course in obstetrics should be open to all the pupils during their second year of training.

Applications for admission to the Training School to the number of 1,080 were received. Forty-one candidates were accepted. Thirty-one nurses graduated, and the total number of graduates is now 525.

Fourteen graduates have been appointed to important hospital positions, and 10 applications for graduates to accept positions in institutions could not be filled.

Two graduates have entered medical colleges, and one is a student in the Hospital Economics Course at Teachers' College, Columbia University. The willingness of members of the Hospital Staff to give the additional lectures required by the revised course has been deeply appreciated.

Very respectfully,
PAULINE L. DOLLIVER,
Superintendent of Training School.

[*The circular of information which is sent to applicants.*]

THE MASSACHUSETTS GENERAL HOSPITAL TRAINING SCHOOL.

The Massachusetts General Hospital Training School for Nurses in Boston has made arrangements for giving a two years' course of training to women who desire to learn the art of nursing the sick.

Letters of application to the Superintendent of the Training School should contain a brief personal history, and should be accompanied by a statement from a physician testifying to sound health and unimpaired faculties. Applicants must be between twenty-three and thirty-five years of age, and of at least average height and weight.

A high-school education or its equivalent is required, and applicants should be prepared to show school diplomas or certificates as an aid in determining the amount of education they have received.

The Superintendent of the Training School and the Resident Physician of the Hospital decide as to the acceptability of candidates. The class is formed during the spring and summer months, but application should be made at least six months in advance. If approved, applicants are received for a period of two months' probation, and during this time they should be prepared for an examination in reading, English dictation, and simple arithmetic. The Superintendent of the Training School will decide as to their fitness for the work, and the propriety of retaining or dismissing them.

Those who prove satisfactory are accepted, and become pupils of the School on signing an agreement to remain two years after the period of probation, and to obey faithfully the rules of the Hospital and of the School.

During the first six months the record of the pupil is carefully considered, and if found unsatisfactory or unpromising, the Superintendent of the Training School can drop the pupil from the School. She may, at any subsequent time, suspend and with the approval of the Resident Physician and the Training School Committee dismiss a pupil for misconduct, inefficiency, or neglect of duty.

Except under special circumstances, failure to pass the examinations will be sufficient cause for terminating a pupil's connection with the school.

Pupils reside in the Home, and act as assistants in the various departments of the Hospital. They are expected to perform any duty assigned them by the Superintendent of the Training School.

The hours of duty are from 7 A.M. to 7 P.M.

A vacation of three weeks is given each year.

In sickness, the pupils are cared for gratuitously, but all time so lost must be made up.

As the School is unsectarian, there are no religious services connected with it; but all pupils are expected to attend the places of worship they prefer once on Sunday.

Pupils receive board, lodging, and a limited amount of laundry work.

An allowance of six dollars per month, exclusive of the months of probation, is made to defray the necessary expenses of uniforms and text-books. Pupils should come prepared to pay at the close of the period of probation for their uniforms and text-books, the cost of which will not exceed fifteen dollars.

A regular course of lectures, recitations, and demonstrations is given, with examinations at stated periods. Instruction is also given at the bedside of patients by the visiting and resident physicians and surgeons.

When the full term of training is completed, after passing the examinations, the nurse receives the diploma of the School, and is at liberty to choose her own field of labor, either in hospital or district work, or in private families. As it is believed that an annual report of the addresses and positions of the graduates of the School will be for the advantage of the nurses as well as the School, the graduates are requested to send their addresses to the Superintendent of the Training School on or before December first of each year.

A graduate of this School who wishes to gain special proficiency in the care of nervous and mental cases has the privilege, under certain restrictions, of entering the McLean Hospital Training School for Nurses. Such graduates will, after one year's satisfactory study, receive the diploma from that School in addition to the one received from the Massachusetts General Hospital Training School for Nurses.

Personal application may be made to the Superintendent of the Training School Wednesday mornings, between 10 and 12 o'clock.

LECTURES.

FIRST YEAR.

Mondays, 4 P.M.

HYGIENE.

DR. ARTHUR K. STONE.		5.
Sept. 11.	I. Air, ventilation.	
" 18.	II. Water, food.	
" 25.	III. Disinfection: — Apartments, clothing, excreta and its disposal.	
Oct. 2.	IV. Personal hygiene, clothing, bathing, exercise.	
" 9.	V. The relations of bacteria to health and disease.	

ANATOMY AND PHYSIOLOGY.

DR. WILLIAM M. CONANT.		10.

MEDICAL SUBJECTS.

DR. RICHARD CABOT.		12.
Jan. 15.	I. Temperature, pulse, respiration.	
" 22.	II. How to observe and record symptoms.	
" 29.	III. Nursing in diseases of the heart, blood-vessels, blood.	
Feb. 6.	IV. Nursing in diseases of the heart, blood-vessels, blood.	
" 13.	V. Nursing in diseases of the heart, blood-vessels, blood.	

Feb. 20.	VI.	Nursing in diseases of the heart, blood-vessels, blood.
" 27.	VII.	Nursing in diseases of the lungs, stomach, intestines, liver, etc.
Mar. 6.	VIII.	Nursing in diseases of the lungs, stomach, intestines, liver, etc.
" 13.	IX.	Nursing in diseases of the lungs, stomach, intestines, liver, etc.
" 20.	X.	Rheumatism.
" 27.	XI.	Typhoid fever.
Apr. 3.	XII.	Medical emergencies, chills, convulsions, hemorrhage, etc.

MATERIA MEDICA.

MR. WALTER J. DODD.	3.
Apr. 10, 17, 24.	Drugs; their preparation, administration, and physiological action. Poisons and their antidotes.
	Twelve lessons in cooking. Miss Mary A. Boland.
	Demonstrations in nursing.

SECOND YEAR.

Thursdays, 4 P. M.

BACTERIOLOGY.

DR. JAMES H. WRIGHT.	2.
Sept. 14-21.	

SURGICAL SUBJECTS.

DR. CHARLES L. SCUDDER.	4.
Sept. 28.	I. Principles of aseptic and antiseptic surgery.
Oct. 5.	II. Dressings and instruments.
" 12.	III. Wounds, healing of wounds. Surgical diseases, inflammation, suppuration, abscess, etc.
" 19.	IV. Nursing in abdominal surgery, in cases of tracheotomy and intubation of the larynx.
DR. CHARLES A. PORTER.	2.
Oct. 26.	I. Fractures, dislocations, sprains, application of splints.
Nov. 2.	II. Fractures, dislocations, sprains, application of splints, continued.

DR. MAURICE H. RICHARDSON. 3.

- Nov. 9. I. Administration of anæsthetics.
 " 16. II. Care of patient before, during, and after
 operation.
 " 23. III. Hemorrhage, shock, collapse.

GYNÆCOLOGY.

DR. JAMES M. JACKSON. 2.

- Dec. 7. I. Pelvic anatomy. Preparation of patients for
 examination and operation.
 " 14. II. Nursing in diseases of the pelvic organs.

OBSTETRICS.

DR. CHARLES W. TOWNSEND. 2.

- Dec. 21. I. Anatomy of the pelvic organs. Physiol-
 ogy and hygiene of pregnancy.
 Jan. 4. II. Labor — after care of mother and child.
 Emergencies.

CHILDREN.

DR. CHARLES W. TOWNSEND. 2.

- Jan. 11. I. Care and feeding in health and disease.
 " 18. II. Care and feeding of infants in health and
 disease.

CONTAGIOUS AND INFECTIOUS DISEASES.

DR. JAMES J. MINOT. 5.

- Feb. 1, 8, 15. How communicated, how controlled and
 prevented.
 Isolation, disinfection.
 Nursing in scarlet fever, diphtheria, measles,
 small-pox, etc.
 Nursing in typhoid fever, tuberculosis, ma-
 laria, influenza, etc.

KIDNEYS.

- March 1, 8. Anatomy and physiology, analysis of urine.
 Nursing in diseases of the kidneys.

THE SKIN.

DR. JOHN T. BOWEN. 2.

- March 15. I. Anatomy and care.
 " 22. II. Nursing in diseases of the skin.

NERVOUS SYSTEM.*

DR. JAMES J. PUTNAM.

2.

March 29. I. Anatomy and physiology.

April 5. II. Nursing in diseases of the nervous system.
Chorea, epilepsy, etc. Care of the insane. Rest cure.

THE EYE.

DR. FRANKLIN E. CHENEY.

1.

April 12. I. Anatomy and care of the eye in health and disease.

THE EAR.

DR. HENRY L. MORSE.

1.

April 19. I. Anatomy and care of the ear in health and disease.

THE NOSE AND THROAT.

DR. ALGERNON COOLIDGE, JR.

2.

April 26. I. Anatomy and care of the nose in health and disease.

May 2. II. Anatomy and care of the throat in health and disease.

DIET IN HEALTH AND DISEASE.

DR. WILLIAM W. GANNET.

2.

May 9 and 16.

TWELVE LESSONS IN MASSAGE.

MISS OLGA SANDAHL.

SIX LESSONS IN BANDAGING.

TWELVE LESSONS IN DEMONSTRATIONS IN NURSING.

TWELVE LESSONS IN URINALYSIS DEMONSTRATIONS.

TABLE AND CHART SHOWING THE
YEARLY NUMBER OF MEDICAL AND
SURGICAL CASES TREATED AT THE
GENERAL HOSPITAL, 1821-1899.

The subjoined table was compiled as follows: —

The total number of patients for each year was obtained from the admission book. In similar tables compiled and printed in Reports for the years 1847 and 1873, there are several errors, *e. g.*, in the years 1825, 1826, 1827, 1832, 1841, 1844, and 1864.

Up to 1873 there is no division of patients into medical and surgical. Consequently, from 1821 to 1873 the number of medical patients was obtained from counting the cases in the medical records. In a similar manner, the number of surgical patients up to 1841 was secured. On consulting the tables, however, it will be seen that the totals for the years up to 1841 do not always correspond with the totals for these years which an addition of the medical and surgical patients gives. These errors are undoubtedly due to the confusion produced by transfers from one service to the other; the records of the number of patients remaining in the Hospital at the end of the year; and the fact that patients are often entered in several record books and, therefore, counted more than once in enumeration. Mistakes in the records themselves, and the complications arising from the Accident Room service, constitute other sources of error.

From 1841 to 1873 the number of surgical patients was arrived at by deducting the number of medical patients from the total for each year.

From 1873 to date the figures are taken from the Annual Reports.

The appended chart gives a graphical representation of the tabular results.

ELLIOTT P. JOSLIN.

REPORT

OF THE

CLINICAL-PATHOLOGICAL LABORATORY AT THE GENERAL HOSPITAL, IN BOSTON.

The Clinical-Pathological Laboratory is a special department of the Hospital and it has now been in operation three years. Its existence is due to a special fund contributed by friends of the Hospital in response to the manifest need of such an establishment to bring the work of the Hospital abreast of the progress in medical knowledge.

The foundation of clinical or pathological laboratories in exclusive connection with hospitals is a comparatively recent thing in this country, where it is only beginning to be generally recognized that our knowledge of the nature and causes of disease has reached the dignity of a science with great possibilities for the good of the human race ; and that properly equipped laboratories are quite as necessary for the proper cultivation of this science as are laboratories for biology, chemistry, or physics. At the present time, there are probably not more than half a dozen such special laboratories, that are worthy of the name, in this country ; while in some European countries, particularly in Germany, the hospital laboratory has been regarded for many years as a necessary department of a large hospital, and it is largely due to these laboratories that Germany has been able to add so much to medical knowledge, for most of the remarkable progress in medicine and surgery has been made

possible through experiments and observations carried on in them.

The Laboratory occupies two floors of a building constructed for its use, and is equipped with the various microscopical, bacteriological, and chemical apparatus and reagents which are required in the study of disease by modern laboratory methods. The erection and equipment of this department of the hospital is such an unusual thing in this country that some statement of its functions, and of the part played by it in the practical work of the Hospital, seems desirable.

In the first place, the Laboratory furnishes facilities for carrying on what may be called the routine laboratory work of the wards. This consists of a great variety of tests and manipulations, both microscopical and chemical, which are applied to the sputum, the urine, the blood, and to various other materials from the patients in the Hospital. These tests and manipulations are of great importance in the diagnosis and treatment of diseased conditions. In fact, in many conditions, the laboratory examination is the only method of arriving at a certain diagnosis. Thus the examination of the sputum for the presence of tubercle bacilli in cases of suspected or incipient tuberculosis of the lungs is the only sure means of diagnosis in many cases of the disease ; and inasmuch as it is chiefly in the early stages of the disease that appropriate treatment may be successful, the practical importance of this laboratory test is obvious.

The examination of the urine may also serve as an illustration of the importance of the laboratory in practical medical work. This examination is regarded as of so much importance that in this hospital it is made in the case of every patient admitted to

the wards, and in many cases it is repeatedly made. By means of this examination of the urine, not only may a diagnosis of disease of the kidneys be confirmed, or the nature of an obscure or doubtful case be rendered clear, but also information may be obtained as to the progress of the kidney disease and as to the probable duration of the malady. To the surgeon, the examination of the urine is of importance because it may give him timely warning that a certain case is not suitable for operation without grave risk on account of the existence of renal or other disease.

Another example of the kind of work done in the Laboratory, as a part of the daily routine, is the microscopical examination of the blood in various ways and for various purposes. This is a subject that has developed only within the last decade and it is still growing. It is only by means of this examination that a satisfactory and definite diagnosis of certain diseases peculiar to the blood may be made. Thus, for example, the finding of the malarial parasite in a drop or two of the patient's blood by means of the microscope is, in many cases, the only sure and certain way of determining the existence of malarial infection; and of distinguishing between malarial fever and other febrile conditions, in which the treatment is radically different. In typhoid fever the blood test is often of the greatest value in confirming the diagnosis. This test is one of the latest contributions of bacteriology to practical medicine. It depends upon the fact that a drop of blood drawn from the lobe of the ear, or from the finger-tip of the patient, when mixed with a few drops of bouillon containing living typhoid bacilli, has the property of causing the bacilli, which are in active motion, to cease their motion and to gather together in clumps and groups. These

phenomena are, of course, observed with the aid of the microscope. In surgery, the microscopical examination of the blood is also of acknowledged usefulness; for by the observation of an increase in the number of the white or colorless corpuscles of the blood the suspicion of an acute inflammatory condition of some of the internal organs may be confirmed and appropriate measures resorted to. The determination of the number of corpuscles in a definite quantity of blood is done by the actual counting of the corpuscles in a minute but accurately measured quantity placed in a special apparatus which is brought under the lens of the microscope. This laboratory test is made in all cases in which the symptoms are indefinite, especially in cases of suspected appendicitis or similar conditions.

The bacteriological examination of pathological fluids and other material from the patients is also an important function of the Laboratory. In many instances the results of such examinations are of great usefulness in recognizing the nature of the disease, so that the proper methods of treatment may be adopted early. This may be illustrated by the well-known culture test in cases of sore throat which occur from time to time in the wards. As a rule, these cases, in their beginning, cannot be differentiated into those that are due to infection with the diphtheria bacillus and those that are not, except by means of the culture test.

Another function of the laboratory is to decide upon the nature of tumor growths, or similar diseased conditions of various parts of the body, in cases where there is a doubt concerning the nature of the disease. This is done by the microscopical examination of small pieces of the diseased tissue, and it is

made possible by reason of the fact that certain pathological conditions of any part of the body always have their own microscopical structural characteristics which enable a specialist in microscopy to distinguish between conditions which, in their gross appearances, are very much alike. Thus, in cases of suspected cancer, the microscopical examination is often the only sure method of immediately determining the truth. The importance of this to the patient, as well as to the surgeon, will be obvious, when one considers that a definite knowledge of the nature of the case may enable the latter to decide whether an operation is advisable or not, or whether an extensive or only a limited operation is indicated. It may also be a means of recognizing serious conditions at an early stage, when there is better chance for a cure.

The making of post-mortem examinations is also a part of the work of the Laboratory. The object in view in this work is to determine the nature of the disease process in each case as far as present medical knowledge goes. Therefore, not only are careful microscopical studies made of diseased tissues and organs, but also bacteriological examinations are regularly carried out to determine the presence or absence of any pathogenic bacteria in any of the important internal organs. In this way only can many obscure cases be explained, and a satisfactory idea obtained as to the nature of the process or processes that caused the death of the individual.

While the Laboratory is primarily designed to aid in the medical and surgical work of the Hospital, it is also intended to be a means of advancing and diffusing knowledge in those subjects to which it is devoted. Under certain regulations, it provides working places, apparatus, and reagents for persons who wish

to pursue special studies in clinical microscopy, pathological histology and bacteriology, and in pathological and physiological chemistry. The Hospital furnishes abundant material for these studies, and work of this character is encouraged. Since the foundation of the Laboratory a considerable number of papers embodying the results of such work have been published as coming from the Laboratory.

During the past year, workers in the Laboratory have pursued special studies as follows: —

Dr Franz Pfaff, with Dr. James J. Putnam, finished the research, extending over two years, on the urine of epileptic and migrainous patients. They have analyzed over 7,000 liters of urine in this research.

As a sequel to this research, the quantity of uric acid has been determined in epileptic patients, before and after the attack. The results of this work will soon be ready for publication.

Dr. Elliott P. Joslin studied the influence of bile on metabolism. A preliminary report of a portion of this research has been published, and the work has continued, observations being made on :

First. — A normal person.

Second. — A complete biliary fistula in a healthy person. Here the metabolism was studied first with the fistula open and later with the fistula closed.

Third. — A patient secreting a small amount of bile.

Besides the observations on man, the metabolism of four dogs with biliary fistulæ has been studied. As soon as another set of observations can be made on a man with a complete biliary fistula, the results of all the work will be published together.

Dr. Franz Pfaff also studied a new camphor derivative. The work was undertaken to find if pos-

sible a soluble camphor derivative possessing the medicinal action of camphor but soluble in water, so that the absorption of this drug, and therefore its action and dosage, could be accurately determined. The new camphor derivative studied was soluble in water, but had lost all its physiological action. This work will be continued.

Dr. Frank J. Geib has undertaken a study of the influence of compensated heart lesions upon the metabolism of the body, under the provisions of the Dalton Scholarship of the Hospital.

He is also studying the action of derivatives of the alkaloid physostigmine. This research is made with the idea to find if possible a substitute for the alkaloid physostigmine possessing all the desirable action of physostigmine without having its undesirable action.

Dr. Franklin W. White is studying the effects of certain food-stuffs on the coagulability of milk in gastric digestion.

Dr. R. B. Greenough and Dr. Oscar Richardson have undertaken the investigation of certain questions in regard to the causation of cancer in connection with the coöperative investigation of this subject which has been organized by Dr. J. C. Warren and Dr. H. K. Oliver, under the bequest of Caroline Brewer Croft.

Dr. J. L. Goodale has studied the pathological histology of diseases of the throat in connection with the clinical work in the Out-patient Department of the Hospital.

Dr. W. H. Smith has studied the pathological histology of pneumonia under the provisions of the Dalton Scholarship of the Hospital.

Dr. J. H. Wright, with the assistance of Mr. L. S.

Brown, has studied the subject of photomicrography with the purpose of perfecting the work of the Laboratory in this useful method of making illustrations to accompany the published results of work done in the Laboratory. As a partial result of this study, a lantern-slide exhibition of photomicrographs of the malarial parasites in the blood and internal organs was given at the annual meeting of the Massachusetts Medical Society and at a Clinical Meeting of the Hospital. The possibilities of photographing certain minute objects at very high magnifications has been greatly increased by means of a machine for cutting very thin sections which has been designed by Mr. Francis Blake, one of the Trustees of the Hospital, and has been in use by the Laboratory during the last two years. With this machine it is possible, under the most favorable conditions, to cut sections one micron, or one twenty-five thousandth of an inch, in thickness. Dr. Wright has also studied methods for the cultivation of bacteria in the absence of oxygen, with special reference to the bacillus of tetanus or "lock-jaw." He has also been engaged in the study of certain questions in the pathology of actinomycosis, a disease comparatively little known in this country; and he has completed a paper on a case of "multiple myeloma," a peculiar affection of the bones.

Dr. Mark W. Richardson has had the following subjects under investigation:—I. The Rôle of Bacteria in the Formation of Gall Stones. II. Studies upon Typhoid Immunity with especial reference to Serum Treatment. III. On the Cultivation of the Typhoid Bacillus from Rose Spots.

The following papers, based on special studies carried on in the Laboratory, have been published during the year :—

DR. J. L. GOODALE.

"Acute Suppurative Processes in the Faucial Tonsils."

New York Medical Journal. October 7, 1899.

"A Contribution to the Pathological Histology of Acute Tonsillitis."

Journal of the Boston Society of the Medical Sciences.
January, 1899.

"A Consideration of Parenchymatous Inflammations of the Tongue and Mouth."

Annals of Gynæcology and Pediatrics. June, 1899.

DR. ELLIOTT P. JOSLIN.

"The Influence of Bile on Metabolism."

Journal of the Boston Society of the Medical Sciences.
Vol. III., p. 259.

"A Preliminary Report of a portion of the work done under the Provisions of the Dalton Scholarship for the years 1898 and 1899."

DR. MARK W. RICHARDSON.

"On the Rôle of Bacteria in the Formation of Gall Stones."
(Preliminary Note.)

Journal of the Boston Society of the Medical Sciences.
January, 1899.

"On the Value of Urotropin as a Urinary Antiseptic, with especial reference to its Use in Typhoid Fever."

Journal of Experimental Medicine. Vol. IV., No. 1,
1899.

DR. FRANKLIN W. WHITE.

"Cultures from the Blood in Septicæmia, Pneumonia, Meningitis, and Chronic Diseases."

Journal of Experimental Medicine. Vol. IV., p. 425.

Journal of the Boston Society of the Medical Sciences. •
Vol. III., p. 197.

"Experiments upon the Germicidal Properties of Blood Serum."

Journal of the Boston Society of the Medical Sciences.
Vol. III., p. 52.

Boston Medical and Surgical Journal. Vol. CXL., p.
177.

DR. FRANZ PFAFF.

"An Experimental Research indicating that Paraxanthin Poisoning is not the Cause of Epilepsy or Migraine."

Transactions of the Association of American Physicians,
1899.

DR. J. H. WRIGHT.

“Examples of the Application of Color Screens to Photomicrography.”

Journal of the Boston Society of the Medical Sciences.
Vol. III. 1899.

DR. J. H. WRIGHT AND MR. L. S. BROWN.

“Photographs of Malarial Parasites.”

Journal of the Boston Society of the Medical Sciences.

The year has witnessed an increase in the use of the facilities of the Laboratory in all its departments.

The work in the department of chemistry, under the direction of Dr. Pfaff, has outgrown the present rooms assigned to it, while more space is also needed for the other purposes of the Laboratory.

The ventilating apparatus installed for the autopsy room has been found to be an indispensable addition and a source of much comfort, for it has removed the most disagreeable feature of the room.

In conclusion, I wish to gratefully acknowledge, in behalf of the Laboratory, the gift of a set of excellent autopsy instruments from Dr. Charles G. Weld ; and the gift of two Minot-Blake Microtomes from Mr. Francis Blake.

Respectfully submitted,

JAMES H. WRIGHT,

Director.

REPORT OF TREADWELL LIBRARY.

GRACE W. MYERS,
Asst. Librarian.

DALTON SCHOLARSHIP.

The income of this fund, amounting to \$500 annually, is devoted to investigation in the science of medicine. The rules of the Trustees applicable to it are as follows:—

ARTICLE 1. Candidates shall be nominated to the Board of Trustees by the General Hospital Staff, with recommendations for the information of the Board. They shall be either Internes of the General Hospital or graduates of a regular American college.

ARTICLE 2. The nature of the work in medical investigation proposed to be prosecuted by each candidate shall be designated.

ARTICLE 3. Scholars shall be appointed by the Board from among the candidates named.

ARTICLE 4. Scholars shall be under the supervision of the Staff, and the Staff shall, whenever it thinks desirable, report to the Board any dissatisfaction it may feel as to the work or methods of scholars, and the Board may act in the premises as in the case of Internes.

ARTICLE 5. Scholars are required to do an amount of work equivalent to not less than ten hours per week from the last Wednesday in September to the last Wednesday in June and to present to the Trustees, at the end of the year, a report on the amount and result of the work performed. The results of work of scholars shall appertain to the Hospital, and when made public, the name of the scholar shall accompany the publication; but no publication shall be made unless recommended by the Staff and approved by the Board.

ARTICLE 6. Should the work of a scholar extend through a part of a year only, he shall be entitled to a proportionate share of income.

ARTICLE 7. When the income is insufficient, appointments for the year may be omitted.

ARTICLE 8. Any income not used shall be cumulative and not added to the principal.

ARTICLE 9. Scholars shall be eligible for renomination and reappointment.

ARTICLE 10. Candidates for scholarship should make written application to the Resident Physician of the Massachusetts General Hospital on or before May 15, and the scholarship shall be held for one year from September 15 following.

Further information may be had by applying to the Resident Physician of the Massachusetts General Hospital.

Rules for Admission, etc.

Application for admission of patients should be made at the Hospital on Blossom Street, Boston, on week days between the hours of 9 and 11 A. M. and 2 and 3 P. M.

Recent accidents admitted at all hours.

Out-patients received between the hours of 9 and 10 A. M. week days only. Out-patient service is for the poor only.

Applications from a distance should be made in writing, accompanied by a full description of the case by the attending physician, with reason of the physician for thinking hospital treatment desirable, and when a free bed is needed, by a statement of the pecuniary condition of the patient. Always wait for a reply before sending the patient.

Contagious and chronic diseases are not admitted.

Regular charges to paying patients are as follows: in the Jackson Ward (private), \$35 per week; in small room in the Townsend and Bigelow Wards, \$21 per week; in the General Wards, \$10.50 per week. These rates, covering only expenses of board and lodging, may be increased or abated in individual cases by the Resident Physician.

An ambulance, accompanied by a medical officer, will be despatched to any point within the city proper for the conveyance of cases of accident or urgent sudden sickness, not contagious, to this Hospital, or elsewhere, upon notice from a physician, the police, or other responsible source, subject to the approval of the Resident Physician.

In cases requiring gratuitous treatment no charge will be made.

SURGICAL OPERATIONS.

FROM JAN. 1, 1899, TO DEC. 31, 1899, INCLUSIVE.

SURGICAL OPERATIONS.	ADMITTED.			DISCHARGED.						
	Males.	Females.	Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1900.	Total.
OPERATIONS ON THE BLOOD VESSELS.										
For aneurism, femoral	2	2	2	2
popliteal	3	3	2	1	3
For aneurismal varix	1	1	2	1	1	2
OPERATIONS ON THE GLANDS.										
ON THE PAROTID GLANDS.										
Abscess	1	1	1	1
Chondroma	2	2	2	2
Carcinoma	2	2	2	2
ON THE SUBLINGUAL GLANDS.										
Excision		1	1	1	1
ON THE THYROID GLAND.										
For goitre	2	5	7	2	4	1	7
ON THE BREAST.										
Abscess		6	6	5	1	6
Lipoma		1	1	1	1
Fibroma		10	10	3	5	2	10
Adeno-fibroma		2	2	1	1	2
Adenoma		1	1	1	1
cystic		2	2	1	1	2
Carcinoma	2	45	47	3	38	1	5	47
recurrent		6	6	5	1	6
Cyst		6	6	3	2	1	6
Tumor (unspecified)		1	1	1	1
ON THE CERVICAL GLANDS.										
Incision for tubercular adenitis	3	1	4	4	4
Excision	20	13	33	1	32	33
Enchondroma		1	1	1	1
Carried forward	38	102	140	22	105	2	1	10	140

SURGICAL OPERATIONS, 1899 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.			DISCHARGED.						
	Males.	Females.	Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, '00.	Total.
<i>Brought forward</i>	38	102	140	22	105	2	1	10	140
ON THE AXILLARY GLANDS.										
Tuberculosis	1	1	1	1
Abscess	3	3	3	3
Sinus	1	1	1	1
Excision	2	1	3	3	3
ON THE INGUINAL GLANDS.										
Abscess	1	1	2	1	1	2
Incision for adenitis	1	1	1	1
Excision	2	2	4	1	2	1	4
Lympho-sarcoma	1	1	1	1
Carcinoma	1	2	3	1	2	3
OPERATIONS ON THE NERVES.										
For neuralgia of vertex.....	1	1	1	1
Neurectasis	1	1	1	1
Neurotomy.....	1	1	1	1
Neurorrhaphy.....	4	2	6	1	4	1	6
Neurectomy.....	6	3	9	8	1	9
OPERATIONS ON THE AIR PASSAGES.										
ON THE NOSE. (See also Orthopedic Operations.)										
Plastic	1	1	1	1
Papilloma.....	1	1	1	1
Epidermoid carcinoma.....	1	1	1	1
Adeno-carcinoma.....	1	1	2	2	2
ON THE LARYNX.										
Carcinoma	1	1	1	1
ON THE TRACHEA.										
Tracheotomy.....	1	1	1	1
ON THE LUNGS.										
Sarcoma.....	1	1	1	1
ON THE PLEURA.										
Incision for empyema. (See also Re-section of Rib.).....	5	5	5	5
<i>Carried forward</i>	72	118	190	26	145	4	1	14	190

SURGICAL OPERATIONS, 1899 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.			DISCHARGED.						
	Males.	Females.	Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1900.	Total.
<i>Brought forward</i>	72	118	190	26	145	4	1	14	190
OPERATIONS ON THE HEAD AND FACE.										
ON THE HEAD.										
Adhesions of dura mater separated	1	1	1	1
Sarcoma of brain.....	1	1	1	1
Cerebral tumor (unspecified).....	1	1	1	1
Exploratory craniotomy.....	1	1	1	1
Wen of scalp.....	1	1	2	2	2
ON THE FACE.										
Tuberculosis.....	1	1	1	1
Abscess.....	1	1	2	2	2
Plastic.....	3	3	3	3
Excision of ulcer.....	1	1	1	1
Angioma.....	2	5	7	1	5	1	7
Epidermoid carcinoma	6	2	8	6	1	1	8
Wen.....	1	1	1	1
ON THE FOREHEAD.										
Epidermoid carcinoma.....	2	1	3	2	1	3
Wen.....	1	1	1	1
ON THE CHEEK.										
Sinus	1	1	1	1
Sarcoma.....	1	1	1	1
OPERATIONS ON THE EYE AND EAR.										
ON THE EYE.										
Enucleation	3	3	2	1	3
Plastic of eyelid.....	1	1	1	1
Epidermoid carcinoma of eyelid.....	2	2	2	2
Carcinoma of orbit.....	1	1	1	1
ON THE EAR.										
Epidermoid carcinoma	3	3	3	3
<i>Carried forward</i>	99	136	235	28	182	5	5	15	235

SURGICAL OPERATIONS, 1899 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.			DISCHARGED.						
	Males.	Females.	Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1900.	Total.
<i>Brought forward</i>	99	136	235	28	182	5	5	15	235
OPERATIONS ON THE MOUTH, LIPS, TONGUE, ETC.										
ON THE MOUTH.										
Carcinoma	3	3	1	2	3
ON THE LIPS.										
Harelip	8	3	11	8	3	11
and cleft palate	1	2	3	1	2	3
Excision of cicatrix	1	1	1	1
Plastic of lip	1	2	3	..	3	3
Carbuncle	3	3	1	2	3
Angioma	1	2	3	2	1	3
Lymph-angioma	1	1	1	1
Papilloma	1	1	1	1
Epidermoid carcinoma	24	24	7	16	1	24
ON THE TONGUE.										
Carcinoma	3	2	5	1	3	1	5
Ranula	1	1	1	1
ON THE PALATE.										
Staphylorrhaphy. (See also Harelip and cleft palate)	6	3	9	6	2	1	9
ON THE TONSILS.										
Tonsillectomy	1	1	2	2	2
Sarcoma	2	2	2	2
ON THE ŒSOPHAGUS.										
Œsophagotomy	1	1	2	2	2
Carcinoma	1	1	1	1
OPERATIONS ON THE NECK.										
Excision of cicatrix	1	1	1	1
Abscess	7	6	13	12	1	13
Sinus	1	1	1	1
For torticollis	2	1	3	3	3
For actinomycosis	2	2	2	2
<i>Carried forward</i>	168	162	330	56	224	6	8	16	330

SURGICAL OPERATIONS, 1899 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.			DISCHARGED.

DISTANT VIEW FROM THE HOSPITAL.

ANNUAL REPORT (EIGHTY-SECOND)

OF THE

SUPERINTENDENT OF THE McLEAN HOSPITAL.

The following report, with tabular statements relating to the number and condition of the patients treated in the Hospital during the year 1899, is respectfully presented:—

TABLE No. 1.
GENERAL STATISTICS OF THE YEAR.

	Males.	Females.	Total.
Patients in the Hospital Jan. 1, 1899	72	84	156
Admissions within the year	61	74	135
Whole number of <i>cases</i> within the year	133	158	291
Discharged within the year	59	73	132
Namely — as Recovered	16	21	37
Much improved	10	13	23
Improved	10	17	27
Unimproved	12	16	28
Not insane	3	3	6
Deaths	8	3	11
Patients remaining Dec. 31, 1899, } supported as private patients }	74	85	159
Number of different <i>persons</i> within the year . .	130	156	286
" " " " admitted	60	74	134
" " " " recovered	16	21	37
Daily average number of patients	72.67	84.52	157.19

During the year one man was twice admitted, one man and one woman were twice discharged, and one man and one woman were discharged and re-admitted. Thus the 291 cases treated represented 286 persons.

Of the 134 persons admitted during the year, 82 were regarded as recent cases, and 52 as chronic, or incurable.

There were 96 persons, 44 men and 52 women, who had never been in any hospital. Of the remaining 38 persons, 23, 8 men and 15 women, were admitted for the second time; 8, 3 men and 5 women, for the third time; 4, 3 men and 1 woman, for the fourth time; 1 man for the fifth time; 1 woman for the sixth time; and 1 man for the seventh time.

In 1899 there were 3 more admissions, 11 less discharges, and 8 less cases under treatment than during the year 1898, and the number present was 3 more at the end than at the beginning of the year.

Of the 130 persons discharged, including deaths, 19, 5 men and 14 women, were transferred or committed to other hospitals in this State, and 1 man and 2 women to hospitals in other States.

Of the 37 persons discharged recovered, 22 had never before been inmates of any hospital; and the remaining 15 persons had been in this and other hospitals. These 15 persons had previously made 24 recoveries.

The average duration of illness from the beginning of attack in all cases recovered was 9.51 months, and the average duration of their residence in the hospital was 5 months.

The percentage of recoveries on all admissions, for the year 1899, was 27.4.

The voluntary cases admitted during the year numbered 61, 28 men and 33 women. Of these, 24 were cases of depressive-maniacal insanity, 6 of involution psychosis, 5 of dementia præcox, 4 of general paralysis, 2 of neurasthenia, 2 of primary delusional insanity, and 1 each of various diseases, for which see

PROPERTY OF
THE
LIBRARY OF CONGRESS

PIERCE BUILDING (ADMINISTRATION HOUSE), LOOKING EAST.

Table No. 14. Six were not insane and in 5 cases no diagnosis was made.

The 61 voluntary cases admitted during the year, with 38 such cases remaining from previous years, furnished 20 recoveries. The voluntary patients have yielded 32.8 per cent. of recoveries on the admissions of that class for 1899, thus furnishing more than their due proportion of all the recoveries. Of this class, 6 other cases were discharged much improved, 13 improved, 13 not improved, 6 not insane, and 3 were committed. The total remaining under the voluntary relation at the end of the year is 38 persons, 16 men and 22 women.

The number of cases admitted as voluntary patients under the present law is as follows: namely, 1881, 1; 1882, 11; 1883, 33; 1884, 49; 1885, 34; 1886, 29; 1887, 29; 1888, 34; 1889, 41; 1890, 58; 1891, 40; 1892, 52; 1893, 46; 1894, 40; 1895, 39; 1896, 48; 1897, 61; 1898, 61; 1899, 60; — a total of 766 cases in 19 years.

The voluntary cases were eight less than one-half of all admissions. Three of these were regularly committed after admission to the Hospital — 1 because the case was not a proper one to remain on the voluntary basis, and 2 because of their demand for discharge.

The fourth year's work in the New Hospital at Waverley presents as a significant feature the evidence of its having nearly reached the limit of its capacity. With the small increase in the number of admissions, and of women patients transferred to other hospitals, the wards for women were kept overcrowded throughout the year. A large proportion of the cases admitted being acute, it is consistent that the recoveries were increased. With a daily average of 157, the

admission of 135 cases shows a continuance of the rapid movement of the population that characterizes the work of this Hospital. This implies the continuance also of the practice of sending patients here for first care and treatment as "observation cases." The most urgent need of the Hospital, at the present time, is an addition to the accommodations for women. With more patients the average cost would be less, and the benefits of treatment could be extended to a larger number of persons.

The clinical work has been diligently carried on during the year by the Medical Staff. The careful clinical studies of all cases, in the wards and at the regular conferences, have a special object. The aim is to differentiate and identify mental diseases, to determine the characteristic symptom-groups that constitute distinct forms of disease, and to penetrate deeply enough if possible into the workings of the mind to find explanatory principles that may guide to a better understanding of these disorders. It is felt that encouraging progress is being made in these special lines of investigation. The conditions are favorable here for such inquiries ; with a considerable number of patients of a class whose education enables them to express their minds, and lay them open to clinical questioning, more can be learned than under other circumstances. The special opportunity afforded points to the duty of pursuing these studies here. It is interesting to note that our conceptions of the principal forms of mental disease have changed gradually through being subjected to the rigid tests of actual cases, and that this leads to simplifying the forms or making fewer of them. The encouragement is in the sense of having gained certain satisfactory conceptions that stand the test of clinical facts.

BATH ROOMS. RESTING ROOM.

BATH ROOMS. HOT AIR CABINETS.

BATH ROOMS. DOUCHE ROOM.

These being gained as fundamental principles, there is then something less vague than formerly to which may be referred all that can be found out of the pathological conditions beginning at the earliest departures from physical and mental health. The influence of these studies is indicated in some degree in the Statistical Table, No. 14, giving the forms of mental disease. The demand seems greater for the collateral inquiries into the bodily conditions that accompany these mental states. This prompts the renewal of the plea, many times repeated in these reports, for the means of pursuing these collateral inquiries by laboratory investigations in pathological chemistry, from which we may hope for immediate guidance in the treatment of the patients. Something has been done here in this direction during the past ten years ; but the clinical side of the work, and the laboratory facilities, are still waiting for the competent expert to complete the efficient organization of this plan laid out before the new hospital was built.

The chief contribution of the year to the means for improving the medical treatment was the bath-room in connection with the women's gymnasium. Both men and women have the daily use of these baths, which are arranged upon the system of Doctor Baruch ; nearly thirty patients receive this treatment every day. Its benefits are apparent in many ways, and it has already become an invaluable part of our therapeutic methods. The nurses receive instruction, as a part of their training, in the giving of baths, not only by means of the special apparatus, but in the various ways of using wet and dry packs, affusions, drip sheets, etc., available for private patients at their homes.

There has been no abatement in the usefulness of physical training as a means of treatment in the forms

of medical and general gymnastics, and of out-door exercise in sports and games. The carving and wood-working classes, in the shops provided in the men's gymnasium, have spent many hours at this work under the direction of a teacher. In the women's gymnasium the class in drawing has served the same purpose. The work of this class which is conducted in the Art Room, has been greatly stimulated by the collections of fine pictures that have been loaned for periods of six months, or for much longer times in some cases, by their owners for exhibition here. This friendly interest continues to increase, and the patients and all who are concerned in their care gratefully appreciate the good fortune that brings to us these pleasing and refining influences which contribute greatly to the healing of those suffering from mental illnesses. It is a proof of the remedial influences of the women's gymnasium, with its conservatory and billiard-room, and its increasing collection of paintings, photographs, casts, and books, that it has become the practice to bring there every forenoon a number of the patients whose illnesses make it difficult to afford them the ordinary means of occupation and recreation.

The Samuel Eliot Memorial Chapel fund, having been increased this year to \$29,000 by an additional gift from its first donor, has attracted a great deal of interest and inquiry. The religious exercises on Sunday afternoons in the Entertainment Hall are always well attended and the patients look forward with interest to having a fitting place for these services. There are others who, having been patients here and remembering their experiences in this regard, are earnest in their desire to promote the building of this Chapel, which is felt to have a peculiar appropriate-

MEN'S GYMNASIUM. PATIENTS' WORKSHOP.

ness as a memorial. There are those, also, who as former residents of the Hospital appreciate the value of giving the Chapel an aspect of cheering attractiveness that should be made consistent with its architectural requirements. To this end, there is a proposition to join to the original fund another for the building of an accessory vestry-like structure which shall be an art room for the pictures, photograph library, constituting an art museum suited to the circumstances, and a meeting place for kindred purposes, one of which it would happily serve as a music room. Not the least of its advantages would be the fire-proof construction of the building for the loans of valuable paintings. In connection with the main structure it is proposed to have cloister-like arcades with a conservatory and adjoining garden effects, and by placing the whole among the trees on a favorable site, to give the Chapel a beautiful and attractive setting worthy of all its purposes as a memorial. In the last year of his life Doctor Eliot took much interest in the proposed building of a chapel, the idea of which he had entertained from the beginning of his association with the Hospital. He approved of the conception of a plan to combine the two principal features of it which are now proposed. The architectural studies already in progress show all the parts of the plan to be practicable. The development of such a plan for a chapel is especially interesting as a direct outgrowth from a sense of the peculiar needs of the Hospital. It is proposed to make the funds sufficient for the construction and maintenance of the combined structures. There are a number of satisfactory examples of hospitals having detached chapels; and the carrying out of the special plan now proposed for the McLean Hospital would produce results of great value to it.

A site for the Chapel and its proposed annexes has been chosen on the slope of the hill to the west of the Appleton House ; Mr. R. Clipston Sturgis has offered a study of them which is presented in the accompanying cuts, showing, in plan and perspective, the arrangement of the buildings and their surroundings, including a lawn and flower garden on the natural terraces of the hillside.

In the medical staff there were the regular changes due to the annual appointment of junior assistant physicians to serve for one year. But their service was sadly interrupted by the death, April 7, of Dr. Albert E. Loveland, after a short illness. Dr. Loveland, whose home was at Fair Haven, Conn., was a graduate of Wesleyan University and Yale Medical School. After serving for a year at the Worcester Insane Hospital as a junior assistant, he was appointed to the same position here. He gave unusual promise of success in the work which he had chosen for his professional career, for which he possessed admirable qualifications. In the few months of his service here he gained the respect and affection of all who knew him ; and his untimely death was deeply felt as a personal loss by the patients and his associates, who shared in the sorrow of his family and many friends. Dr. Charles B. Dunlap vacated his position as junior assistant, on the first of September, and on that date Dr. William G. Ward and Dr. Guy G. Fernald were appointed to that office.

The Training School for Nurses has been conducted in its usual course with constant satisfactory results. A special report of it will be found in the appendix to this report. This training includes a course of instruction in cookery ; the instructor, besides this teaching, has the general supervision of the kitchens

in the several houses, and of all serving and dining rooms, including the arranging of the dietary and the study of economic questions.

There has been substantial progress during the year in meeting the requirements incident to a new institution in its first years, when there is much to be done to complete the construction in minor details, with the need of the adapting and perfecting of parts the practical working of which cannot be exactly foreseen. Much was accomplished during the year in overcoming such difficulties and in gaining better control of the elements of the administrative problem which is peculiar to each individual institution. There is ample assurance that, within due time for the normal development of so great a work as this, the results will be good.

Very respectfully,

EDWARD COWLES,

Medical Superintendent.

SEVENTEENTH ANNUAL REPORT

OF THE

MCLEAN HOSPITAL TRAINING SCHOOL FOR NURSES.

The Training School for Nurses, with the completion of the eighteen years of its existence, has a roll of graduates including 354 names — 233 women and 121 men. In the following summary it is shown how many remain in the work of nursing, and into what positions in life others have gone.

	<i>Men.</i>	<i>Women.</i>
Number of graduates in fourteen years	121	233
Graduates remaining in the service as nurses	14	19
Graduates remaining in the service as officers	1	4
Pupils in Massachusetts General Hospital Training School .		9
Previously graduated at Massachusetts General Hospital Training School		64
Superintendents of hospitals		3
Superintendents of nurses, other hospitals	2	9
Employed in other institutions	9	8
Engaged in private nursing	31	97
Medical students	13	2
Physicians	15	
Dental student	1	
Dentists	3	
Clergyman	1	
Students	7	
In other business	15	
At home	3	18
Married and left the profession		56
Deceased	6	8
Pupils now in this school	36	37

This table shows that of the 354 graduates of the School in eighteen years, 57 men still continue the work, either in hospitals or in private nursing, besides 32 who are either physicians, medical students, or dentists. Of the 149 women who continue their professional work, 23 are in this Hospital and 29 in other

institutions; official positions are held by 21 in connection with training schools. Of the remaining women graduates still living, the 56 who are married, and the 18 at home, are possessed of qualifications for practical usefulness gained by their education as nurses.

The work of the School is producing its usual successful results, and some progress is being made in improving the courses of instruction. Besides the courses of lectures—thirty in each year—and the usual instruction in the text-books used in the general hospitals, with practical training in the wards and sick-rooms, the special course in cookery is an established part of the teaching. All the nurses, in classes of two or three, during the junior year spend 24 forenoons in the Training School kitchen, receiving instruction in the principles of cookery, besides preparing food for the sick. They are also instructed in the art of serving food and the economical management of the dietary while making it satisfactory.

During the past year the bath-rooms were opened for use in the Women's Gymnasium; in connection with the new system of hydrotherapeutics the nurses are taught to give hot and cold baths and affusions, and the use of wet and dry packs and the drip-sheet, etc. The training in the application of this method of treatment, together with medical gymnastics, massage, etc., will be found to be of great value to the nurse, in increasing her usefulness in her professional work.

The provision for giving the graduates of this School the privilege of entering that of the Massachusetts General Hospital for an additional year of training is still continued. The like privilege is also given to graduates of that school for the training here.

Information is given in the following pages to those who wish to become applicants for admission to the school ; its work is described by a statement of the course of instruction, the general order of exercises, and the subjects of the lectures.

EDWARD COWLES,
Superintendent.

MCLEAN HOSPITAL TRAINING SCHOOL FOR NURSES, WAVERLEY, MASS.

The Trustees of the Massachusetts General Hospital Corporation, having established at the McLean Hospital a School for Nurses, offer to give to men and women desirous of becoming professional nurses a two years' course of training in general nursing, with special reference to the care of cases of nervous and mental disease. The Training School is conducted by the Superintendent of the Hospital, under the authority of the Board of Trustees.

Those wishing to receive such a course of instruction must write to the Superintendent of the McLean Hospital, Waverley, Mass., giving a brief personal history and also the names and addresses of three responsible persons who know of their good character and capabilities. If it is then thought advisable for such prospective candidates to make a formal application, blank forms especially provided for this purpose will be sent to them.

Candidates must be in sound health, and must send with their application a certificate from a physician certifying to the fact. The most desirable age is from twenty-one to thirty-five years.

Upon the recommendation of the Superintendent of the Hospital and the approval of the Trustees, they will be received for two months on probation, at the expiration of which time they will, if accepted, sign an agreement to complete the prescribed course of two years.

The nurses are subject to the rules of the Hospital. Their fitness for the work and the propriety of re-

taining or dismissing them at the end of the two months of trial are determined by the authorities in charge of the School, under the direction of the Trustees.

At the end of the first six months the record of each pupil is again carefully scrutinized and the right is reserved to terminate then, or at any other time, the connection of any pupil or nurse with the School and Hospital for inefficiency, misconduct, generally unsatisfactory record, or for any other reason which may be deemed sufficient.

All nurses are required to be sober, honest, truthful, trustworthy, punctual, quiet, orderly, cleanly, neat, patient, kind, and cheerful.

Instruction is given by the officers of the Hospital. The course includes the general care of the sick; the managing of helpless patients in bed, in moving, changing bed and body linen, making of beds, etc.; giving baths, keeping patients warm or cool, preventing and dressing bed sores; bandaging, applying of fomentations, poultices, and minor dressings; the preparing and serving of food, the feeding of helpless patients and those who refuse food; the administering of enemas and use of the catheter; attendance upon patients requiring diversion and companionship; the observation of mental symptoms, delusions, hallucinations, delirium, stupor, etc.; and the care of excited, violent, and suicidal patients.

They are also given instruction in the best practical methods of supplying fresh air, and of warming and ventilating sick-rooms in a proper manner, and are taught to take proper care of rooms and wards, to keep all utensils perfectly clean and disinfected, etc.; to observe the sick accurately in regard to the state of secretions, pulse, breathing, skin, temperature,

sleep, appetite, effect of diet, of stimulants, and medicine; the giving of massage, and the managing of convalescents.

Instruction is also given in the modern methods of physical training, by the use of free movements and the usual apparatus, in a gymnasium provided for the patients. The nurses assist in the medical application of physical exercise. Each nurse is required to have a gymnasium costume, the material for which will be furnished, at moderate cost, by the Hospital.

Written examinations take place at the middle and end of each school year, and pupils must attain on critical marking at least sixty per cent.

Instruction by text books and lectures is given for eight months of the year, from October 1 to May 31, but accepted candidates enter the School whenever vacancies occur. They are usually taken in the order of acceptance, though some can anticipate this time and enter with less delay, if they are so situated as to be able to have their names placed on the emergency list. It is no disadvantage to enter the School between May and October, as the pupil gets some practical knowledge of the care of patients before taking up the study required by recitations and lectures.

There is no fixed date for graduation. On completion of the full term of two years, nurses who have passed all the required examinations receive diplomas certifying to their period of training, their proficiency, and good character.

The pupils reside in the Hospital and are employed as assistant nurses in its wards. The men are paid twenty dollars (\$20) per month during the first year and twenty-three dollars (\$23) per month during the second year. The women are paid twelve dollars

(\$12) per month during the first year and fifteen dollars (\$15) per month during the second year. Their education during this time is a valuable addition to the compensation for their services.

Most graduates engage in private nursing or accept positions of trust in other institutions. Some are invited and prefer to remain in the service of this Hospital. Men graduates of this School are paid twenty-seven dollars (\$27) per month during the first year and thirty dollars (\$30) per month thereafter. Women graduates of this School are paid twenty-five dollars (\$25) per month during the first year and thirty dollars (\$30) per month thereafter. Graduates of this School, who are also graduates of the Training School for Nurses at the Massachusetts General Hospital in Boston, are paid thirty-five dollars (\$35) per month.

The women probationers while on duty are expected to dress plainly and neatly in a cotton gown, and are permitted to wear, of the regular uniform, only the cap and apron. The men wear ordinary plain clothing. After formally joining the School, at the end of the period of probation, both men and women are required to wear the Hospital uniform at all times while on duty in the wards.

Women graduates of this School who wish to have additional practical experience and instruction in general nursing, have the privilege, under certain restrictions, of entering the Training School for Nurses at the Massachusetts General Hospital in Boston. Such graduates will, after one year's satisfactory study, receive the diploma from that School, in addition to the diploma received from the McLean Hospital Training School.

COURSE OF INSTRUCTION.

Junior Year :

- Physiology and Hygiene (to the Nervous System) . . . *Hutchison.*
 Fever-Nursing *Wilson.*
 A Text-Book of Nursing *Weeks-Shaw.*
 What to do First in Emergencies *Dulles.*
 Practical Instruction in Massage (twelve lessons).
 Physical Training (thirty lessons).
 Practical Instruction in Cookery ; for women, each morning for one
 month ; for men, eight lessons.
 Instruction in the wards by the Superintendent of Nurses, Super-
 visor, and Head Nurses.
 A Lecture each week. — Assistant Physicians.

Senior Year :

- Physiology and Hygiene (completed) *Hutchison.*
 A Text-Book of Nursing (completed) *Weeks-Shaw.*
 A Hand-Book of Obstetrical Nursing *Fullerton.*
 How to Care for the Insane *Granger.*
 Physical Training (thirty lessons).
 Practical Instruction in Massage (ten lessons, men).
 Instruction in the Wards by the Superintendent of Nurses, Super-
 visor, and Head Nurses.
 A Lecture each week. — Superintendent.

Books for Reference :

- A Text-Book for Training School for Nurses *Wise.*
 The Care of the Sick *Billroth.*
 Hand-Book for Hospitals . . . *State Charities Aid Association, N. Y.*
 Hand-Book for the Instruction of Attendants on the Insane,
Sub-Com. British Med.-Psych. Association.
 A Primer of Psychology and Mental Disease *Burr.*

ORDER OF EXERCISES.

Monday.

MEN.

- 3.00 P. M. Junior Class (Div. of six, six lessons), Bandaging.
- 4.00 P. M. Junior Class, Recitation.
- 6.30 P. M. Junior Class (Div. of eight), Massage.

Tuesday.

- 4.00 P. M. Senior Class, Lecture.

Wednesday.

- 4.00 P. M. Junior Class, Lecture.
- 6.30 P. M. Junior Class, Instruction in Physical Training.

Thursday.

- 11.00 A. M. Junior Class (Div. of six, six lessons), Bandaging.
- 2.00 P. M. Junior Class (Div. of eight), Massage.
- 4.00 P. M. Senior Class, Recitation.

Friday.

- 11.00 A. M. Junior Class (in Divisions of six, from February 3), Care of Sick Patients in Bed, Poulticing, etc.
- 3.00 P. M. Junior Class (Div. of eight), Instruction in Cookery.
- 4.00 P. M. Mixed Class, Lecture.

Monday.

WOMEN.

- 9.00 A. M. Junior Class, in Divisions of two for one month each (every morning in the week), Instruction in Cookery.
- 4.00 P. M. Senior Class, Recitation.
- 7.00 P. M. Junior Class (1st Div.), Recitation.
- 8.00 P. M. Mixed Class, Instruction in Physical Training.

Tuesday.

- 11.00 A. M. Senior Class, Recitation.
- 4.00 P. M. Senior Class, Lecture.

Wednesday.

- 11.00 A. M. Junior Class (2d Div.), Recitation.
- 4.00 P. M. Senior Class (Div. of six), Poulticing, Bandaging, Drugs, etc.

Thursday.

- 11.00 A. M. Head Nurses, Review, etc.
- 4.00 P. M. Mixed Class, Instruction in Physical Training.

Friday.

- 4.00 P. M. Junior Class, Lecture.

Saturday.

- 4.00 P. M. Junior Class (Div. of six), Massage.

SUBJECTS OF LECTURES.

JUNIOR YEAR.

- TWO. — The skeleton: skull, thorax, pelvis, and spinal column, general anatomy and physiology; a consideration of the more common injuries to which they are liable.
- THREE. — Surgical landmarks: prominent points of the skeleton [demonstration on a subject]. Fracture and repair of bones. The joints; sprains, dislocations, etc.
- ONE. — The muscles: general anatomy and physiology. Paralysis, rigor mortis, etc.
- THREE. — The blood: its function, coagulation, etc. The heart and blood-vessels. The pulse: information to be gained from it; causes of variation in rate, strength, etc. Diseases of the circulatory system.
- TWO. — Hæmorrhage: varieties — epistaxis, hæmoptysis, from various parts of the alimentary canal, post partum, apoplexy, etc. Symptoms of serious hæmorrhage; various means of stopping it. Demonstration on a subject of location of blood vessels and methods of applying pressure.
- TWO. — Respiration: organs and mechanism of; effect of various diseases; asphyxia; artificial respiration [demonstration on a subject].
- ONE. — Suicide: causes, means, etc. Care of suicidal patients.
- ONE. — Animal heat: its source, regulation, change in disease, and methods of ascertaining and recording.
- ONE. — The use of heat in the treatment of disease; sources and the effects obtained; baths, general and local, poultices, fomentations, etc.
- TWO. — The use of cold in the treatment of disease; sources and effects. Fever: methods of reducing high bodily temperature.
- TWO. — Pathogenic germs: contagious diseases; disinfectants and disinfection.
- THREE. — Consideration of some common acute diseases.
- ONE. — Various diseases of which dropsy is a symptom.
- FIVE. — Effect of states of mind on the body; mind cure, etc. Drugs and medicines: methods of administration; circumstances that modify their ordinary effects.
- TWO. — Surgical nursing.
- TWO. — Charts and records. Practical hints.

SENIOR YEAR.

- ONE. — The history of hospitals.
- ONE. — The history of nursing.
- ONE. — Duties of the nurse.
- ONE. — General care of patients. Personal hygiene.
- ONE. — Hospital housekeeping.
- ONE. — Heating and ventilation.
- TWO. — The nervous system.
- ONE. — The special senses.
- ONE. — Reflex action of the nervous system.
- FOUR. — Mental faculties and their disorders.
- ONE. — Common sensations and their disorders.
- ONE. — Nervous exhaustion and its nursing care.
- ONE. — Nature and causes of insanity.
- ONE. — Hypochondriasis. Eccentricity.
- TWO. — Fixed ideas. Hysteria.
- THREE. — Melancholia and mania. The duties of the nurse in the care of these conditions.
- ONE. — Dementia, and the care of patients in its various forms.
- ONE. — Delusional insanity; its various forms.
- ONE. — Epilepsy and convulsions.
- ONE. — General paralysis.
- ONE. — Writing notes of mental symptoms.

THE EIGHTY-SEVENTH ANNUAL REPORT. FOR THE YEAR 1900.

The committee appointed by the Trustees to prepare the Annual Report to the Corporation of the Massachusetts General Hospital have the honor to submit the following as the text thereof.

As usual, the three major departments of the Hospital are designated as the General Hospital, the McLean Hospital, and the Convalescent Home.

THE GENERAL HOSPITAL IN BOSTON.

The administration of the General Hospital during the past year has been most successfully carried on by Dr. Herbert B. Howard, Resident Physician. The Trustees recognize with great satisfaction his continued and increasing efficiency, and they acknowledge the very great aid they have received from him in the preparation and execution of the plans of the various new buildings constructed and to be constructed.

A summary of the financial exhibit for the year for this department, compared with that for 1899, is as follows :

	1899.	1900.
Expenses	\$186,947.60	\$204,895.65
Charges to patients	70,037.65	74,556.05
Cost of free patients	\$116,909.95	\$130,339.60
Income from various special funds and free- bed subscriptions	103,389.52	117,082.90
Deficit, met by income from the General Fund,	\$13,520.43	\$13,256.70

The income from various special funds and free-bed subscriptions shows an increase of	\$13,693.38
Charges to patients show an increase of	4,518.40
Expense of administration shows an increase of	17,948.05

The total number of house-patients treated during the year was 4,883, against 5,086 in 1899 ; the daily average being the same as in 1899, 261.

Free patients during 1900, 3,136 ; during 1899, 2,981.

Pay patients during 1900, 1,747 ; during 1899, 2,105.

Average weekly cost per patient, 1900, \$15.05 ; 1899, \$13.74.

In the Accident Room were treated 5,262 patients in 1900, against 3,977 in 1899 ; of this number, 1,171 were retained in the Hospital.

In the Out-Patient Department, the number of new cases treated was 31,043, against 31,003 in 1899. This service involved 108,825 visits, a daily average (306 days) of 355, and a total number of prescriptions filled of 68,143.

These figures show an increase over last year of about 1,000 patients.

Attention is called to the steady increase in the average weekly cost per house-patient, \$13.16 in 1898, \$13.74 in 1899, and \$15.05 in 1900. This is mainly accounted for by a general rise in prices — food supplies costing about 15 per cent. more than in 1899, coal 25 per cent., salaries and wages 11 per cent. Moreover, the steadily increasing gravity of the average case calls for more and better nursing and more varied diet. In connection with this subject, it may be of interest to point out that the similar cost in the Presbyterian Hospital, New York, is

\$17.08, and in the Roosevelt, \$17.01 ; and this, excluding cost of Emergency and Dispensary Wards, which is here included in the general expense account.

During the year an automobile ambulance was purchased for the use of the Hospital.

The new Operating Building and the addition to the Thayer Building are nearly completed and already afford great relief.

The Domestic Building is covered in and will, it is hoped, be in use during the year.

The open hand-ball and squash-ball courts, given by Dr. Arthur T. Cabot, have been finished and have proved a great source of pleasure to the house officers.

On Feb 23, 1900, three additional Surgeons to Out-Patients were elected. Their names appear in the Report for 1899.

On March 23, 1900, a communication was submitted from Mr. Thomas E. Proctor, offering to pay one-half the cost, not exceeding \$75,000, of a new building for the Out-Patient service of the General Hospital, the Trustees to appropriate the balance. Thereupon, the Committee on Buildings and Repairs were instructed to procure plans and estimates for such a building ; and the Out-Patient Staff were requested to appoint from their number one physician and one surgeon to act with Doctors R. H. Fitz, J. C. White, and J. J. Putnam, as a Committee of Consultation in the preparation of said plans. At the close of the year, the Architects of the Hospital were preparing preliminary plans for this much needed building, substantially in accordance with sketch plans therefor made by the Resident Physi-

cian and approved by the Committee of Consultation; and it is hoped that the building will be well under way next summer. Its cost will probably be between \$200,000 and \$300,000.

On April 6, 1900, Dr. W. M. Conant was elected a Visiting Surgeon to fill the vacancy caused by the retirement of Dr. John Homans.

On April 20, 1900, the office of Consulting Orthopaedic Surgeon was created; and on May 4, 1900, Dr. Joel E. Goldthwait was elected to that office.

On June 1, 1900, it was :

Voted, That the Amphitheatre in the new Operating Building at the General Hospital be called the Henry J. Bigelow Operating Theatre; and that Dr. W. S. Bigelow be requested to serve as a committee with full powers to arrange with the architects for the placing therein of the bronze bust of Dr. Bigelow, with a suitable memorial tablet.

On Nov. 16, 1900, Dr. F. E. Draper resigned as Assistant Ophthalmic Surgeon to Out-Patients.

THE CONVALESCENT HOME IN WAVERLEY.

A summary of the financial exhibit for the year for this department, compared with that for 1899, is as follows:

	1899.	1900.
Expenses	\$9,867.40	\$10,059.01
Charges to patients	3,231.25	3,483.75
Cost of free patients	\$6,636.15	\$6,575.26
Income from the Convalescent Home Fund . .	6,552.90	7,281.00
Deficit, met by income from the General Fund .	\$83.25	
Surplus, credited to the General Fund		\$705.74

The Trustees take pleasure in pointing out that with the assistance of its endowment the Home has been more than self-sustaining.

The total number of patients treated during the year was 436, against 474 in 1899; the daily average being 24, against 26 in 1899.

The buildings are in fairly good order, though some repairs to the floors are needed.

The Home has been as usual satisfactorily managed by Miss Alice Scott, the Matron, under the guidance of Dr. Howard.

THE MCLEAN HOSPITAL IN WAVERLEY.

The administration of the McLean Hospital has been carried on by Dr. Edward Cowles, with his usual skill.

A summary of the financial exhibit for the year for this department, compared with that for 1899, is as follows:

	1899.	1900.
Expenses	\$222,777.56	\$235,107.36
Charges to patients	191,952.92	199,325.51
Cost of free patients	\$30,824.64	\$35,781.85
Income from various Special Funds	11,799.19	18,632.03
Deficit, met by income from the General Fund	\$19,025.45	\$17,149.82

The value of materials and supplies (mostly coal) on hand at the close of the year 1900 is about \$9,500 more than in 1899. This should be deducted from the above figure in making a fair comparison between the two years.

The income from various special funds shows an increase of	\$6,832.64
Charges to patients show an increase of	7,372.59
Expenses of administration show an increase of	12,329.80

The total number of cases treated during the year was 328, against 291 in 1899, an increase of 37; and the daily average number of patients in the Hospital was 164.59 in 1900, against 157 in 1899.

The average duration of illness, from the beginning of the attack in 36 cases recovered, was $10\frac{97}{100}$ months, and the average duration of their residence in the Hospital was $7\frac{9}{10}$ months.

The average weekly cost per patient in 1900 was \$26.30, against \$27.06 in 1899.

It should be noted that the expense account for 1900 covers the cost of opening the new Chemical Department, including part of supplies and fittings, repairs and alterations of the Laboratory, previously arranged in a temporary manner ; and about one-half the cost of the new Gas Plant.

On June 15, 1900, Miss Frances E. Gilbert, for thirty-three years Clerk of the McLean Hospital, resigned. The thanks of the Board are due for her faithful and valuable services.

On Dec. 31, 1900, Dr. H. W. Miller resigned as Junior Assistant Physician at the McLean Hospital ; and subsequently Dr. Emma W. Mooers was appointed to that office for the remainder of the term ending Sept. 1, 1901.

MASSACHUSETTS GENERAL HOSPITAL.

The total expenses in the different departments exceeded the receipts from patients and income from special funds by \$29,700.88. This has been met by the income from the General Fund.

In accordance with the recommendation of the Medical Staff the Trustees awarded a Dalton Scholarship, with an income of \$500, for the year ending Sept. 15, 1901, to Dr. M. P. O. Vejux-Tyrode. Subject : "Investigations on the Blood in Cases of Bright's Disease."

On April 6, 1900, the following vote was passed :

Whereas, The President and Fellows of Harvard University have arranged to give during the ensuing summer a six weeks' course of instruction to about seventeen hundred (1,700) teachers of the public schools of Cuba, it is :

Voted, That the Secretary be requested to inform Mr. Frye, Superintendent of said schools, that the courtesies of the Massachusetts General Hospital will be extended free to the Cuban physicians who accompany the said teachers, and that special effort will be made to aid them in their treatment of any patients they may have in charge during their sojourn in Boston or its vicinity.

On June 15, 1900, the death of Mr. Edmund Dwight, late Chairman of the Board, being announced, the following resolution was unanimously adopted :

Whereas, Edmund Dwight, Esquire, died on June 6, 1900, be it :

Resolved, That the Trustees hereby record their appreciation of the very great value of Mr. Dwight's continuous service for thirty-two years as a Trustee of the Massachusetts General Hospital, during the last two years of which he was Chairman of the Board.

The period of Mr. Dwight's long service is marked by the greatest extension of the plant and the work of the Hospital which has taken place since its foundation; and the Trustees make grateful acknowledgment of the devotion with which he at all times exerted his rare business abilities in its behalf.

The Board's memory of Mr. Dwight's sterling character will cease only with the life of his last surviving associate Trustee, and his honorable name will forever be prominent in the history of the Massachusetts General Hospital.

Dr. Henry P. Walcott was elected Chairman to fill the vacancy.

On Oct. 5, 1900, a communication from a committee of the International Jury of the Paris Exposition, Class 112, Public and Private Charities, was read, announcing the award of a gold medal to the Massachusetts General Hospital; and asking for a brief statement of its origin, growth, scope, and leading results actually accomplished, to which Mr. Blake had prepared a response. It was thereupon :

Voted, That the Board approve the response; and that Mr. Blake be authorized to send the same, in behalf of the Corporation, after being translated into French as desired.

A new edition of the Rules of the Trustees was adopted April 6, 1900.

In conclusion, the Trustees wish to call attention to the Treasurer's Report; the Report on Donations, which they regret to say shows a falling off; and the valuable reports of Doctors Howard and Cowles, and through them to the detailed reports of medical and surgical cases, records, and statistics; also to Dr. Wright's excellent report from the Clinico-Pathological Laboratory.

FRANCIS L. HIGGINSON,
FRANCIS BLAKE.

At a meeting of the Trustees held February 6, 1901, the foregoing report was submitted by the Committee and approved by the Trustees. It was thereupon:

Voted, That the same be laid before the annual meeting of the Corporation, to be held this day.

Attest:

THOS. B. HALL,
Secretary.

DONATIONS.

The Committee on the Book of Donations reports that the following donations and legacies have been received during the year 1900 :

January 17th. Donation of Mrs. Eliot to the McLean Hospital, in memory of Samuel Eliot	\$1,000.00
January 22d. Part of bequest of Anna S. C. Prince,	200.00
March 6th. Additional donation from estate of J. Putnam Bradlee under instructions of the late Helen C. Bradlee	25,000.00
March 17th. Bequest of Marshall K. Abbott for use of the McLean Asylum for the Insane .	\$2,500.00
Less U. S. legacy tax	250.00
	2,250.00
April 23d. Bequest of Robert Chas. Billings	\$50,000.00
Less U. S. legacy tax	7,500.00
	42,500.00
April 24th. Part of bequest of Anna S. C. Blake income to the support of a free bed to be known as the J. Collins Warren bed	5,000.00
April 26th. Bequest of Frances E. Bangs,	\$2,000.00
Less U. S. legacy tax	150.00
	1,850.00
April 27th. As residuary legatee under will of Henry L. Pierce	15,000.00
May 19th. Donation of Dr. A. T. Cabot for Open Ball Court at the Hospital	1,000.00
June 16. Legacy of Daniel Sharp Ford (unrestricted)	7,000.00
July 23d. Part of bequest of Anna S. C. Prince .	200.00
August 10th. Balance of bequest of Anna S. C. Blake income to the support of a free bed, to be known as the J. Collins Warren bed	5,000.00

August 11th.	Balance of legacy under will of Robt.	
	C. Billings. Amount retained by executors,	
April 23d		\$7,500.00
	Less U. S. legacy tax	3,750.00
		<hr/>
		\$3,750.00
December 26th.	Balance of legacy from Marshall	
	K. Abbott (see entry March 17th), U. S. legacy	
tax refunded		250.00
		<hr/>
		\$110,000.00

And these sums have been entered in the Book of
Donations in the usual form.

JOHN M. HARLOW,
Committee on Book of Donations.

REPORT OF THE TREASURER.

In accordance with the Fifth Article of the By-Laws, the annual report of the accounts of the Massachusetts General Hospital made up to the last day of December, 1900, is respectfully submitted, to be laid before the Corporation at its annual meeting.

Dr. FRANKLIN HAVEN, Treasurer, in account with the MASSACHUSETTS GENERAL HOSPITAL, Cr.

 1900 = 5,112.

Examination of Accounts.

BOSTON, Feb. 16, 1901.

To the Committee on Accounts,

Massachusetts General Hospital:—

I hereby certify that I have examined the books of the Convalescent Home, McLean Hospital, General Hospital, and of the Treasurer, for the year ending Dec. 31, 1900, as follows viz.: The cash books, journalizings, and the trial balance, and I found the same correct. I found vouchers, or satisfactory evidence of payment for the cash disbursements.

I found cash, cash vouchers, and cash in the banks as per amounts called for by the cash books.

The balances on the Treasurer's books agree with the balances on the books at the McLean and General Hospitals.

I found bonds and stock certificates, as per bond and stock accounts, and note, as per notes receivable on the trial balance herewith.

WALDO L. ABBOTT.

THE ANNUAL REPORT OF THE RESIDENT PHYSICIAN OF THE GENERAL HOSPITAL IN BOSTON.

The average number of patients in the Hospital during the year was 261, the same as last year.

Paying patients were entered at the following prices per week : 1 at \$100 ; 1 at \$50 ; 80 at \$35 ; 1 at \$24.50 ; 233 at \$21 ; 18 at \$15 ; 22 at \$14 ; 559 at \$10.50 ; 137 at \$10 ; 531 at \$7 ; 1 at \$6 ; 2 at \$5.25 ; 52 at \$5 ; 6 at \$4 ; 2 at \$3.85 ; 4 at \$3.50 ; 3 at \$3 ; 2 at \$2.

Whole number of patients treated during the year : paying, 1,534 ; paying part of the time, 213 ; free, 3,136 ; total, 4,883.

Proportion of deaths to whole number of results, .0919+ per cent.

There were 5,262 patients treated in the Accident Room, as against 3,977 last year.

Of this number 1,171 were retained in the Hospital.

The greatest number of patients at one time was 286.

The least number of patients at one time was 235.

Total number of days for paying patients, 35,788 ; free, 59,491 ; total, 95,279.

Average time of paying and free patients, 20—days.

Total number of days for patients at Convalescent Home, 9,125 days. Average time paying and free patients for Hospital and Convalescent Home, 21+ days.

The new Operating Building and the addition to the Thayer Building are approaching completion, and we have begun to occupy portions of them, greatly to the relief of the Hospital. The Domestic Building has been covered in so that work can be continued on it during the winter.

Respectfully submitted,

HERBERT B. HOWARD,
Resident Physician.

TABLE No. 1.

Number of Patients in the Hospital Jan. 1, 1900.

Paying	92
Free	151
Total	243

Admitted from Jan. 1, 1900, to Jan. 1, 1901.

	<i>Male.</i>	<i>Female.</i>	<i>Total.</i>
Patients paying board	877	565	1,442
Patients paying board part of the time	121	92	213
Patients entirely free	1,766	1,219	2,985
	2,764	1,876	4,640
Medical			1,612
Surgical			3,028
Children (included above)			454

Discharged During the Year.

	<i>Medical.</i>	<i>Surgical.</i>	<i>Male.</i>	<i>Female.</i>	<i>Total.</i>
Well	403	942	728	617	1,345
Much relieved	462	572	630	404	1,034
Relieved	324	1,044	837	531	1,368
Not relieved	104	59	96	67	163
Not treated	24	130	94	60	154
Dead	208	241	302	147	449
Insane and eloped	1	3	4	0	4
Against advice	45	62	60	47	107
	1,571	3,053	2,751	1,873	4,624

During the year there were 33 more transferred from the medical side to the surgical side than from the surgical side to the medical side, which accounts for the seeming discrepancy above.

Number of Patients remaining Dec. 31, 1900.

MASSACHUSETTS GENERAL HOSPITAL TRAINING SCHOOL FOR NURSES.

The Report of the Training School for Nurses for the year 1900 is herewith presented :

The only change in the general plan of study for this year is the introduction of a course of sixteen lectures to probationers on elementary anatomy, physiology, and hygiene. This preliminary teaching proved most satisfactory as preparation for the usual junior class work.

The number of applications received was 945. Of the 52 young women admitted as probationers, 31 were accepted as pupils. The two years' term of training was completed by 33 nurses, who were granted diplomas. Five of the class remain in the Hospital in charge of wards.

Circulars of information regarding the Training School and the Post-Graduate Course, now open to graduates of this School, are furnished on application.

Respectfully submitted,
PAULINE L. DOLLIVER,
Superintendent of Training School.

[*The circular of information which is sent to applicants.*]

THE MASSACHUSETTS GENERAL HOSPITAL
TRAINING SCHOOL.

The Massachusetts General Hospital Training School for Nurses in Boston has made arrangements for giving a two years' course of training to women who desire to learn the art of nursing the sick.

Letters of application to the Superintendent of the Training School should contain a brief personal history, and should be accompanied by a statement from a physician testifying to sound health and unimpaired faculties. Applicants must be between twenty-three and thirty-five years of age, and of at least average height and weight.

A high-school education or its equivalent is required, and applicants should be prepared to show school diplomas or certificates as an aid in determining the amount of education they have received.

The Superintendent of the Training School and the Resident Physician of the Hospital decide as to the acceptability of candidates. The class is formed during the spring and summer months, but application should be made at least six months in advance. If approved, applicants are received for a period of two months' probation, and during this time they should be prepared for an examination in reading, English dictation, and simple arithmetic. The Superintendent of the Training School will decide as to their fitness for the work, and the propriety of retaining or dismissing them.

Those who prove satisfactory are accepted, and become pupils of the School on signing an agreement to remain two years after the period of probation, and to obey faithfully the rules of the Hospital and of the School.

During the first six months the record of the pupil is carefully considered, and if found unsatisfactory or unpromising, the Superintendent of the Training School can drop the pupil from the School. She may, at any subsequent time, suspend and with the approval of the Resident Physician and the Training School Committee dismiss a pupil for misconduct, inefficiency, or neglect of duty.

Except under special circumstances, failure to pass the examinations will be sufficient cause for terminating a pupil's connection with the school.

Pupils reside in the Home, and act as assistants in the various departments of the Hospital. They are expected to perform any duty assigned them by the Superintendent of the Training School.

The hours of duty are from 7 A.M. to 7 P.M.

A vacation of three weeks is given each year.

In sickness, the pupils are cared for gratuitously, but all time so lost must be made up.

As the School is unsectarian, there are no religious services connected with it; but all pupils are expected to attend the places of worship they prefer once on Sunday.

Pupils receive board, lodging, and a limited amount of laundry work.

An allowance of six dollars per month, exclusive of the months of probation, is made to defray the necessary expenses of uniforms and text-books. Pupils should come prepared to pay at the close of the period of probation for their uniforms and text-books, the cost of which will not exceed fifteen dollars.

A regular course of lectures, recitations, and demonstrations is given, with examinations at stated periods. Instruction is also given at the bedside of patients by the visiting and resident physicians and surgeons.

When the full term of training is completed, after passing the examinations, the nurse receives the diploma of the School, and is at liberty to choose her own field of labor, either in hospital or district work, or in private families. As it is believed that an annual report of the addresses and positions of the graduates of the School will be for the advantage of the nurses as well as the School, the graduates are requested to send their addresses to the Superintendent of the Training School on or before December first of each year.

A graduate of this School who wishes to gain special proficiency in the care of nervous and mental cases has the privilege, under certain restrictions, of entering the McLean Hospital Training School for Nurses. Such graduates will, after one year's satisfactory study, receive the diploma from that School in addition to the one received from the Massachusetts General Hospital Training School for Nurses.

Personal application may be made to the Superintendent of the Training School Wednesday mornings, between 10 and 12 o'clock.

TWELVE PRACTICAL LESSONS IN MASSAGE.

MISS OLIVIA SANDAHL.

REPORT OF THE CLINICO-PATHOLOGICAL LABORATORY.

The participation of the Laboratory in the medical and surgical work of the Hospital has considerably increased during the past year, the physicians and surgeons availing themselves more frequently of its facilities for the microscopical, bacteriological, and chemical examinations of morbid material from the wards and operating rooms. This increased use of the Laboratory by the Hospital has been an advantage to both.

The facilities offered by the Laboratory for special study in pathology, bacteriology, and physiological chemistry continue to be utilized. For a working place in the Laboratory a charge of \$25 for a year or \$15 for six months is made. From this source the sum of \$415 has been obtained during the year and has been applied to the current expenses of the Laboratory.

The following papers embodying the results of study in the Laboratory have been published during the year:

Branching Forms of the Tubercle Bacillus in the Sputum, by Dr. W. H. Smith, *Journal of the Boston Society of Medical Sciences*, Vol. IV., No. 6.

Observations on Milk Coagulation and Digestion, by Dr. Franklin W. White, *Journal of the Boston Society of Medical Sciences*, Vol. V., No. 4.

Report of Culture Experiments made with Carcinomatous Tissue, 1899-1900, by Dr. Oscar Richardson, *Journal of the Boston Society of Medical Sciences*, Vol. V., No. 2.

On the Presence of the So-called "Plimmer Bodies" in Carcinoma, by Dr. R. B. Greenough, *Journal of the Boston Society of Medical Sciences*, Vol. V., No. 2.

On the Cultivation of the Typhoid Bacillus from Rose Spots, by Dr. Mark W. Richardson, *Journal of the Boston Society of Medical Sciences*, Vol. IV., No. 5. *Philadelphia Medical Journal*, March 3, 1900.

A Simple Method for Anaërobic Cultivation in Fluid Media, by Dr. James H. Wright, *Journal of the Boston Society of Medical Sciences*, Vol. IV., No. 5. *Centralblatt für Bakteriologie und Parasitenkunde*, Vol. XXVII., No. 2.

A Case of Multiple Myeloma, by Dr. James H. Wright, *Journal of the Boston Society of Medical Sciences*, Vol. IV., No. 8. *Transactions of the Association of American Physicians*, Vol. XV.

A Simple Method for Cultivating Anaërobic Bacteria, by Dr. James H. Wright, *Journal of the Boston Society of Medical Sciences*, Vol. V., No. 4.

The Organism and Lesions of Actinomycosis, by Dr. James H. Wright. (Lantern-slide demonstration at the Meeting of the Association of American Physicians in Washington, May, 1900.)

During the year special work in various subjects has been carried on by the workers in the Laboratory, among which the following may be mentioned:

Dr. Mark W. Richardson has continued his study of subjects connected with the bacteriology of typhoid fever.

Dr. E. P. Joslin has completed his study of the influence of bile on metabolism and has been engaged in a study of the "acidiosis" in a case of diabetic coma.

Mr. J. B. Bain has studied the bacteriology of a pseudo-tetanus bacillus.

Dr. Frank J. Geib has completed his work under the provision of the Dalton Scholarship on the met-

abolism of the human body during compensated heart lesions.

Dr. Hugh Williams has studied methods of staining the flagella of bacteria.

Dr. R. W. Tower has begun an investigation in the chemistry of certain excretory products of the human body.

Dr. W. H. Smith has continued his study of the pathology of pneumonia, under the provisions of the Dalton Scholarship.

Dr. J. H. Wright has continued his study of the pathology of actinomycosis and, with the assistance of Mr. L. S. Brown, has also devoted considerable attention to photo-micrography of bacteria for illustrations in Mallory and Wright's "Pathological Technique."

More use has been made of the Laboratory for the teaching of medical students of Harvard University. In addition to demonstrations in pathological anatomy, conducted by Dr. James H. Wright, a course in clinical diagnosis by laboratory methods has been given in the Laboratory in connection with the clinical lectures of Dr. R. H. Fitz. Instruction in physiological chemistry has also been given by Dr. Pfaff to a few special students of the Harvard Medical School.

The much needed additions to the Laboratory for the work in physiological chemistry under the charge of Dr. Franz Pfaff were completed during the summer. These additions consist of 3 large rooms in the upper floor of the new power house adjoining the Laboratory building. They have been fitted out with special reference to the needs of the work in physiological chemistry. The removal of the chem-

ical department from its previous inadequate quarters has made available some much needed space for clinical laboratory work and for photo-micrography. For the latter a special "dark room" has been arranged and also a "developing" room.

These additions and changes, requiring many special fittings, have been made largely by the Hospital's own staff of mechanics in a most satisfactory manner.

Respectfully submitted,

JAMES H. WRIGHT,
Director.

In presenting the annual report for 1900, it is thought that a brief summary of the record for the year, outside of bare statistics, may prove to be of interest.

The thanks of the Library for gifts of books are due to Dr. W. S. Bigelow, Dr. Arthur T. Cabot, Dr. Richard C. Cabot, Dr. Reginald H. Fitz, Dr. James J. Minot, Dr. Frederic C. Shattuck, and Dr. Charles S. Scudder. Reprints also from various sources have been gratefully acknowledged. Through the kindness of the Boston Medical Library, and of three Libraries belonging to the Association of Medical Librarians, viz. : the Quine Library of the College of Physicians and Surgeons, Chicago, the Medical Library of McGill University, Montreal, and the Luzerne County Medical Library, Wilkesbarre, Pa., it has been possible to partially complete certain important files of periodicals, at no expense save that of transportation. Thanks are also due to the Association of Medical Librarians for four of the periodicals "sent by courtesy," and for several books. The College of Physicians and Surgeons, of Philadelphia, has kindly furnished as complete a file as possible of its Transactions.

Among the gifts, there has lately been received from Miss Agnes G. Balch a small portrait, painted on wood, of Mr. George Hallet, Trustee of the Hospital from 1831 to 1833.

In May, 15 volumes of the "Atlantic Monthly," dating from 1860 to 1874, were sent to the Massachusetts State Library; and at the same time to the Free Public Library of Saugus, Mass., were sent 58 volumes of "Littell's Living Age," dating from 1844 to 1872. These books originally belonged to the

General Library of the Hospital ; but having long since been relegated to an attic closet, it was thought wise, as opportunity offered, to transfer them to a more useful field.

A handsome bookplate, designed by D. B. Updike, of Boston, and engraved by E. D. French, of New York, is one of the valuable acquisitions of the year.

Respectfully submitted,

GRACE W. MYERS,

Assistant Librarian.

DALTON SCHOLARSHIP.

The income of this fund, amounting to \$500 annually, is devoted to investigation in the science of medicine. The rules of the Trustees applicable to it are as follows:—

ARTICLE 1. Candidates shall be nominated to the Board of Trustees by the General Hospital Staff, with recommendations for the information of the Board. They shall be either Internes of the General Hospital or graduates of a regular American college.

ARTICLE 2. The nature of the work in medical investigation proposed to be prosecuted by each candidate shall be designated.

ARTICLE 3. Scholars shall be appointed by the Board from among the candidates named.

ARTICLE 4. Scholars shall be under the supervision of the Staff, and the Staff shall, whenever it thinks desirable, report to the Board any dissatisfaction it may feel as to the work or methods of scholars, and the Board may act in the premises as in the case of Internes.

ARTICLE 5. Scholars are required to do an amount of work equivalent to not less than ten hours per week from the last Wednesday in September to the last Wednesday in June, and to present to the Trustees, at the end of the year, a report on the amount and result of the work performed. The results of work of scholars shall appertain to the Hospital, and when made public, the name of the scholar shall accompany the publication; but no publication shall be made unless recommended by the Staff and approved by the Board.

ARTICLE 6. Should the work of a scholar extend through a part of a year only, he shall be entitled to a proportionate share of income.

ARTICLE 7. When the income is insufficient, appointments for the year may be omitted.

ARTICLE 8. Any income not used shall be cumulative and not added to the principal.

ARTICLE 9. Scholars shall be eligible for renomination and reappointment.

ARTICLE 10. Candidates for scholarship should make written application to the Resident Physician of the Massachusetts General Hospital on or before May 15, and the scholarship shall be held for one year from September 15 following.

Further information may be had by applying to the Resident Physician of the Massachusetts General Hospital.

Rules for Admission, etc.

Application for admission of patients should be made at the Hospital on Blossom Street, Boston, on week days between the hours of 9 and 11 A. M. and 2 and 3 P. M.

Recent accidents admitted at all hours.

Out-patients received between the hours of 9 and 10 A. M. week days only. Out-patient service is for the poor only.

Applications from a distance should be made in writing, accompanied by a full description of the case by the attending physician, with reason of the physician for thinking hospital treatment desirable, and when a free bed is needed, by a statement of the pecuniary condition of the patient. Always wait for a reply before sending the patient.

Contagious and chronic diseases are not admitted.

Regular charges to paying patients are as follows : in the Jackson Ward (private) \$35 per week; in small room in the Townsend and Bigelow Wards, \$21 per week; in the General Wards, \$10.50 per week. These rates, covering only expenses of board and lodging, may be increased or abated in individual cases by the Resident Physician.

An ambulance, accompanied by a medical officer, will be despatched to any point within the city proper for the conveyance of cases of accident or urgent sudden sickness, not contagious, to this Hospital, or elsewhere, upon notice from a physician, the police, or other responsible source, subject to the approval of the Resident Physician.

In cases requiring gratuitous treatment no charge will be made.

Excision for tuberculosis	25	9	34	7	26	1	34
ON THE AXILLARY GLANDS.											
<i>Total number</i>				15							
Excision:											
of carcinoma, recurrent		1	1		1			1
glands, for tuberculosis.....	3	7	10	2	7	1	10
Incision, for tuberculosis	1	1		1			1
Incision and drainage of abscess ..	1	2	3		3			3
ON THE INGUINAL GLANDS.											
<i>Total number</i>				9							
Curetting sinus	2	2		2			2
Excision of glands.....				5							
for adenitis.....	2	2		2			2
sarcoma	3	3		2	1	3
Incision for adenitis	1	1		1			1
Incision and drainage of abscess..		1	1		1			1
OPERATIONS ON THE NERVOUS SYSTEM.											
<i>Total number</i>				29							
Excision:											
of cerebral tumor	1	1		1			1
of endothelioma of dura mater..	1	1		1			1
of Gasserian ganglion for neu- ralgia.....		2	2		2			2
of meningocele	1	1		1			1
of sac of spina bifida.....		1	1		1	1
Incision and drainage of cyst of brain		1	1	1	1
Nerve freed after fracture	2	2		2			2
Neurectasis, for traumatic paral- ysis	1	1		1			1
Neurectomy.....				10							
for epilepsy	1	1		1			1
<i>Carried forward</i>	77	122	199		58	127	1	10	3	199

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward</i>	77	122	199		58	127	1	10	3	199
for neuralgia	7	1	8	1	7	8
painful stump of arm	1	1	1	1
Neurorrhaphy, after injury.....	2	3	5	5	5
Neurotomy, for spasmodic torti- collis	1	1	1	1
Removal of bone flap for cerebral tumor	1	1	1	1
Removal of bullet from brain.....	1	1	1	1
Replacing and suturing dislocated ulnar nerve	1	1	1	1
OPERATIONS ON THE AIR PASSAGES.											
ON THE NOSE. (See also Orthope- dic Operations.)											
<i>Total number</i>	5
Excision :											
of epidermoid carcinoma.....	2	2	4	1	3	4
ecchondroma of septum.....	1	1	1	1
ON THE BRONCHI.											
Removal of foreign body.....	1	1	1	1
ON THE LARYNX.											
<i>Total number</i>	5
Dilating stricture.....	1	1	1	1
Intubation for stenosis. (See also Tracheotomy.)	4	4	4	4
ON THE TRACHEA.											
<i>Total number</i>	5
Tracheotomy	5
for spasm of glottis	1	1	1	1
sarcoma of tonsil.	1	1	1	1
stenosis of larynx	1	1	2	2	2
carcinoma of larynx	1	1	1	1
ON THE LUNGS.											
Incision and drainage of abscess..	1	1	1	1
<i>Carried forward</i>	97	137	234		61	157	1	11	4	234

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward</i>	97	137	234		61	157	1	11	4	234
ON THE PLEURA.											
<i>Total number</i>				12							
Incision for empyema. (See also Resection of rib.)	9	2	11	4	4	1	2	11
Incision for pyopneumothorax ...	1	1		1	1
OPERATIONS ON THE HEAD AND FACE.											
ON THE HEAD.											
<i>Total number</i>				9							
Curetting sinus	1	1		1	1
Excision:											
of carcinoma of head		1	1		1	1
of epidermoid carcinoma of fore- head		3	3	..	1	2	3
of cicatrix of forehead		1	1		1	1
Incision of hæmatoma	1	1	1	1
Suture of lacerated wound of scalp	2	2	2	2
ON THE FACE.											
<i>Total number</i>				31							
Curetting, for melanoderma		1	1		1	1
Excision:											
of epidermoid carcinoma	15	2	17	6	9	1	1	17
cicatrix	2	2		2	2
cyst	1	1		1	1
keloid	1	1	1	1
lipoma		1	1	1	1
sarcoma	1	2	3		2	1	3
Incision for sinus	1	1		1	1
Plastic, for cicatricial contraction,	1	2	3		3	3
Scrubbing powder face	1	1		1	1
<i>Carried forward</i>	134	152	286		76	187	3	12	8	286

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward</i>	134	152	286		76	187	3	12	8	286
OPERATIONS ON THE EYE AND EAR.											
ON THE EYE.											
<i>Total number</i>				2							
Excision of carcinoma of orbit		1	1	1	1
Evisceration, after lacerated wound.....	1	1	1	1
ON THE EAR.											
<i>Total number</i>				4							
Excision :											
of epidermoid carcinoma	2	2	1	1	2
keloid	1	1	1	1
Suture of lacerated wound.....	1	1	1	1
OPERATIONS ON THE LIPS, TONGUE, ETC.											
ON THE LIPS.											
<i>Total number</i>				32							
Excision :											
of angioma		2	2	2	2
carbuncle	1	1	1	1
epidermoid carcinoma.....	20	20	8	12	20
lymphangioma ..	1	1	1	1
Operation for harelip	4	2	6	3	2	1	6
Operation for harelip and cleft palate	1	1	1	1
Plastic, after operation for carcinoma	1	1	1	1
ON THE TONGUE.											
<i>Total number</i>				10							
Excision of carcinoma	2	1	3	3	3
Excision of tongue, for carcinoma	4	1	5	4	1	5
Exploratory incision for recurrent carcinoma.....	1	1	1	1
Incision of hæmatoma	1	1	1	1
<i>Carried forward</i>	174	160	334		91	217	5	13	8	334

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.

ON THE PALATE.											
<i>Total number</i>				7							
Cauterization, for carcinoma.....	1	1		1				1
Excision:											
of carcinoma		1	1		1				1
sarcoma.....	1	1			1			1
Staphylorrhaphy. (See also Op- eration for harelip and cleft palate.).....	2	1	3		3				3
Uranoplasty and staphyloplasty...		1	1			1			1
ON THE TONSILS.											
<i>Total number</i>				4							
Excision of sarcoma	1	1	2		1		1	2
Tonsillectomy				2							
for hypertrophy		1	1		1				1
sarcoma. (See also Trache- otomy.)		1	1	1					1
ON THE ESOPHAGUS.											
<i>Total number</i>				7							
Dilating stricture		1	1		1				1
Extraction of foreign body.....	3	3	2	1				3
Esophagotomy, for removal of foreign body	2	1	3	2	1				3
OPERATIONS ON THE NECK.											
<i>Total number</i>				41							
Canterization of nævus.....	2	2		2				2
Curetting tubercular sinus	1	1	2		2				2
Dissection of neck.....				4							
for torticollis	1	2	3		2			1	3
tubercular glands		1	1					1	1
Dissection of subclavian triangle, for oedema after carcinoma of breast		1	1	1					1
<i>Carried forward</i>	188	173	361		97	233	7	15	9	361

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward</i>	188	173	361		97	233	7	15	9	361
Excision :											
of carbuncle.....	2	2	2	2
carcinoma.....	7	7	1	6	7
cyst.....	1	1	1	1
hydrocele.....	1	1	2	1	1	2
sarcoma.....	1	1	1	1
lympho-sarcoma.....	3	3	1	2	3
sinus.....	3	3	2	1	3
Incision of phlegmon	1	1	1	1
Incision and drainage of abscess ..	8	4	12	11	1	12
OPERATIONS ON THE CHEST WALL.											
<i>Total number</i>	9							
Excision of portions of chest wall and of lung, for sarcoma.....	1	1	1	1
Excision of portion of chest wall with resection of diaphragm, for sarcoma	1	1	1	1
Excision of dermoid cyst	1	1	1	1
Excision of lipoma.....	1	1	1	1
Incision and drainage of abscess ..	1	1	2	2	2
Incision and drainage of abscess, tubercular	2	1	3	1	2	3
ABDOMINAL OPERATIONS.											
ON THE STOMACH AND PYLORUS.											
<i>Total number</i>	14							
Dissection of sinus.....	1	1	1	1
Exploratory cœliotomy for carcinoma of stomach	2	1	3	1	2	3
Gastrectomy, for carcinoma	1	1	1	1
Gastro-enterostomy	3							
for carcinoma of stomach	1	1	2	1	1	2
pylorus	1	1	1	1
<i>Carried forward</i>	224	186	410		107	265	7	21	10	410

for fœcal fistula	3	3	1	1			1	3
after gunshot wound.....	1	1						1	1
for rupture	4	4					4	4
Enterotomy				3							
for fœcal fistula	1	1	1					1
obstruction	2	2					2	2
Excision:											
of cœcum, for unspecified tumor	1	1					1	1
of fœcal fistula.....	1	1	1					1
<i>Carried forward</i>	450	296	746		298	345	8	68	27	746

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward</i>	450	296	746		298	345	8	68	27	746
Exploratory cœliotomy				4							
for carcinoma	1		1			1					1
lympho-sarcoma	1		1						1		1
obstruction	1		1						1		1
sarcoma of omentum		1	1						1		1
Inguinal colostomy				2							
for fæcal fistula	1		1			1					1
carcinoma of rectum	1		1			1					1
Intestinal resection				10							
for carcinoma of rectum	2		2			2					2
fæcal fistula	4		4		1	3					4
obstruction	1	1	2						2		2
after rupture	1		1						1		1
for strangulated inguinal hernia	1		1			1					1
Separation of adhesions	1	2	3		1	1			1		3
ON THE LIVER.											
<i>Total number</i>				8							
Excision of carcinoma		1	1				1				1
Exploratory cœliotomy				4							
for carcinoma		1	1						1		1
fibrous hepatitis	1	1	2						2		2
rupture	1		1						1		1
Hepatectomy, after rupture	1		1						1		1
Incision and drainage of abscess ..	1	1	2			1				1	2
ON THE GALL BLADDER.											
<i>Total number</i>				47							
Cholelithotomy		1	1						1		1
Cholecystectomy for cholelithiasis ..	1	6	7		6	1					7
Cholecystotomy				29							
for carcinoma	1	2	3						3		3
cholecystitis	1		1			1					1
<i>Carried forward</i>	472	313	785		306	358	9	84	28	785

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward</i>	472	313	785		306	358	9	84	28	785
for cholelithiasis	5	20	25	8	17	25
Cholecystotomy and choledochotomy	1	2	3	2	1	3
Exploratory cœliotomy	4
for carcinoma	1	1	1	1
cholangitis	1	1	1	1
cholecystitis	1	1	1	1
cholelithiasis	1	1	1	1
Excision of carcinoma	1	1	1	1
Separation of adhesions about gall bladder	1	1	2	1	1	2
ON THE PERITONEUM.											
<i>Total number</i>	32
Cœliotomy for peritonitis	26
general	7	5	12	3	9	12
tubercular	3	4	7	3	4	7
pelvic	2	4	6	3	3	6
chylous	1	1	1	1
Exploratory cœliotomy, for general carcinoma	1	5	6	3	2	1	6
ON THE ABDOMINAL WALL.											
<i>Total number</i>	20
Curetting sinus	2	4	6	4	1	1	6
Excision:											
of keloid in cicatrix	1	1	1	1
sarcoma	1	1	1	1
sinus	2	2	4	1	2	1	4
Incision and curetting of abscess ..	1	1	1	1
Incision and drainage:											
of abscess	2	3	5	2	2	1	5
sinus	1	1	1	1
Plastic operation	1	1	1	1
<i>Carried forward</i>	504	368	872		325	403	14	98	32	872

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward</i>	504	368	872		325	403	14	98	32	872
ON THE ABDOMEN (not otherwise specified).											
<i>Total number</i>				208							
Cœliotomy				14							
for pelvic abscess	2	9	11	1	9		1	11
post-peritoneal abscess		1	1		1				1
subphrenic abscess	2	2		2				2
Exploratory cœliotomy				13							
for?	5	4	9	2	3	1	2	1	9
after gunshot wound.....	1	1						1	1
stab wound.....	2	2	1			1	2
for tuberculosis of mesenteric glands.....	1	1			1			1
Incision of hæmatoma of groin....	1	1	1					1
Herniotomy, for strangulated ventral hernia.....		1	1	1					1
Radical cure of hernia.....				178							
epigastric.....	2	2	1	1				2
femoral.....	1	10	11	9	2				11
inguinal	86	12	98	74	21			3	98

strangulated		3	3	2			1	3
ventral.....	5	18	23	13	7			3	23
ventral and umbilical		1	1	1					1
Separation of adhesions		1	1		1				1
OPERATIONS ON THE RECTUM AND ANUS.											
ON THE RECTUM.											
<i>Total number</i>				102							
Cauterization for hæmorrhoids..	5	2	7	5	2				7
Clamp and cautery for hæmorrhoids	41	23	64	26	35	2		1	64
<i>Carried forward</i>	686	465	1151		490	494	18	107	42	1151

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Male.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward</i>	686	465	1151		490	494	18	107	42	1151
Cauterization for prolapse	1	1	1	1
Curetting:											
for carcinoma.....	2	1	3	3	3
ischio-rectal sinus.....	1	1	1	1
for ulceration	1	1	1	1
Dilating stricture.....	1	1	1	1
Excision:											
of papilloma.....	1	1	1	1
polypus	2	1	3	1	2	3
Exploratory celiotomy for carcinoma.....	1	1	1	1
Incision and tube drainage for carcinoma	1	1	1	1
Incision and drainage of ischio-rectal abscess	9	1	10	1	7	2	10
Kraske's operation, for carcinoma	1	1	2	1	1	2
Littre's operation (modified) for carcinoma	3	1	4	2	1	1	4
Resection	2
for fistula	1	1	1	1
carcinoma	1	1	1	1
ON THE ANUS.											
<i>Total number</i>	60
Cauterization for fissure	1	1	1	1
Dilating sphincter, for fissure.....	4	4	1	3	4
Incision, for imperforate anus....	1	1	1	1
Opening and curetting fistula	42	12	54	12	41	1	54
OPERATIONS ON THE GEN-ITO-URINARY SYSTEM.											
ON THE KIDNEYS.											
<i>Total number</i>	29
Drainage of sinus	1	1	1	1
Exploratory celiotomy for sarcoma	1	1	1	1
<i>Carried forward</i>	759	485	1244		506	559	24	108	47	1244

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward</i>	759	485	1244		506	559	24	108	47	1244
Exploratory incision for floating kidney	1	1	1	1
Excision of adrenal cyst.....	1	1	1	1
Nephrectomy	8
for cystic adenoma	1	1	1	1
hydronephrosis	1	1	1	1
sarcoma	4	4	2	1	1	4
tuberculosis	1	1	2	1	1	2
Nephrorrhaphy, for floating kidney.....	11	11	6	4	1	11
Nephrotomy.....	6
for hydronephrosis	1	1	1	1
nephrolithiasis.....	2	2	1	1	2
pyonephrosis	2	1	3	2	1	3
ON THE BLADDER.											
<i>Total number</i>	26
Cystotomy	6
perineal	1	1	1	1
suprapubic	4	1	5	3	1	1	5
Excision of papilloma	1	1	2	2	2
Litholapaxy	11	11	6	5	11
Lithotomy	1	1	1	1
Paracentesis, for carcinoma	1	1	1	1
Removal of foreign body.....	1	1	1	1
Search made for stone	3	1	4	4	4
ON THE PROSTATE.											
For hypertrophy	6
Bottini's operation.....	2	2	2	2
perineal section.....	1	1	1	1
prostatectomy	2	2	2	2
prostatotomy	1	1	1	1
<i>Carried forward</i>	800	503	1303		524	592	25	109	53	1303

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward</i>	800	503	1303		524	592	25	109	53	1303
ON THE URETHRA.											
<i>Total number</i>				58							
Closing urinary fistula	1	1	1	1
Incision and drainage of periurethral abscess	2	2	2	2
For stricture				55							
divulsion	28	28	6	21	1	28
meatotomy	2	2	1	1	2
perineal section	25	25	6	16	2	1	25
ON THE PENIS.											
<i>Total number</i>				7							
Amputation				3							
for carcinoma	2	2	1	1	2
sarcoma. (See also Orchidectomy.)	1	1	1	1
Curetting, for tuberculosis	1	1	1	1
For hypospadias	2	2	2	2
Plastic, for paraphimosis	1	1	1	1
ON THE PREPUCE.											
Circumcision	7	7	1	6	7
ON THE SCROTUM.											
<i>Total number</i>				37							
Excision:											
of fibroma	1	1	1	1
tuberculous nodules	1	1	1	1
For hæmatocele	2	2	1	1	2
For hydrocele				30							
radical cure	29	29	11	18	29
tapping	1	1	1	1
Incision and drainage of abscess ..	2	2	2	2
Suture of lacerated wound	1	1	1	1
<i>Carried forward</i>	909	503	1412		553	664	28	112	55	1412

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1901.	Total.
<i>Brought forward.</i>	909	503	1412		553	664	28	112	55	1412
ON THE TESTICLES.											
<i>Total number</i>				28							
Curettage, for tuberculosis	1		1			1					1
Excision of sarcoma	1		1		1						1
Incision for tuberculosis	1		1			1					1
Orchidectomy				19							
for epididymitis	2		2			2					2
orchitis	5		5			4			1		5
sarcoma of testicle	2		2			2					2
sarcoma of penis	1		1			1					1
tuberculosis	4		4			3				1	4
undescended testicle	4		4		3					1	4
varicose veins of scrotum	1		1			1					1
Puncturing cyst of epididymis	1		1		1						1
Suturing undescended testicle in scrotum	5		5		2	3					5
ON THE SPERMATIC CORD.											
<i>Total number</i>				27							
Excision, for tuberculosis	1		1			1					1
Radical cure of varicocele	26		26		13	13					26
ON THE PERINEUM.											
<i>Total number</i>				6							
Curettage sinus	3		3			2	1				3
Incision, for extravasation of urine	2					1			1		2
Incision and drainage of abscess	1		1			1					1
GYNÆCOLOGICAL OPERATIONS.											
ON THE VULVA.											
Incision of labial hæmatoma		1	1		1						1
ON THE URETHRA.											
<i>Total number</i>				5							
Cauterization of caruncle		1	1			1					1
<i>Carried forward</i>	970	505	1475		574	701	29	114	57	1475

SURGICAL OPERATIONS, 1900 — *Continued.*

SURGICAL OPERATIONS.	ADMITTED.				DISCHARGED.						
	Males.	Females.	Total.	Sum Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1900.	Total.
<i>Brought forward</i>	970	505	1475		574	701	29	114	57	1475
Excision :											
of caruncle		3	3	1	2	3
polypus.....		1	1	1	1
ON THE VAGINA.											
<i>Total number</i>				28							
Closing vesico-vaginal fistula.....		5	5	1	3	1	5
Colporrhaphy		17	17	7	10	17
Curetting :											
for carcinoma		1	1	1	1
sinus		1	1	1	1
Dilatation		1	1	1	1
Hymenotomy, for imperforate hymen.....		1	1	1	1
Vaginal puncture, for pyosalpinx. (See also Salpingo-oöphorectomy.).....		2	2	1	1	2
ON THE UTERUS.											
<i>Total number</i>				251							
Alexander's operation.....		1	1	1	1
Curetting, for carcinoma.....		8	8	6	2	8
Excision :											
of fibroid		12	12	7	4	1	12
polypus		3	3	2	1	3
Exploratory cœliotomy for carcinoma.....		1	1	1	1
Dilating and curetting		84	84	36	44	2	2	84
Fœtus removed from carcinoma-tus uterus		1	1	1	1
For placenta prævia		1	1	1	1
Hysterectomy				53							
for carcinoma		21	21	7	5	6	3	21
fibroid.....		32	32	21	8	2	1	32
Ventral fixation		87	87	52	30	1	4	87
<i>Carried forward</i>	970	788	1758		711	821	35	123	68	1758

SURGICAL OPERATIONS, 1900 — *Continued.*

ON THE CERVIX UTERI.											
<i>Total number</i>				62							
Amputation				3							
for carcinoma.....		1	1					1	1
erosion.....		1	1	1					1
proidentia.....		1	1			1			1
Cauterization for carcinoma		2	2		2				2
Curetting for carcinoma		6	6		5			1	6
Dilatation		4	4		4				4
Excision of fibroid.....		3	3	3					3
Trachelorrhaphy.		16	16	12	4				16
Trachelorrhaphy and perineorrhaphy		28	28	16	12				28
ON THE PERINEUM.											
Perineorrhaphy. (See also Trachelorrhaphy and perineorrhaphy.)		24	24	14	8			2	24
ON THE BROAD LIGAMENT.											
Excision of cyst.....		3	3	2			1	3
ON THE TUBES AND OVARIES.											
<i>Total number</i>				179							
Cœliotomy, for extra-uterine pregnancy		2	2	1			1	2
Excision:											
of carcinoma of ovary		1	1					1	1
cyst of ovary		7	7	5	1		1	7
Exploratory cœliotomy.....				2							
for malignant cysts of ovaries		1	1			1			1
salpingitis		1	1	1					1
Oöphorectomy.....				36							
for carcinoma		1	1					1	1
cyst		35	35	23	10			2	35
Ovarian fixation		4	4	3	1				4
Puncturing cyst of ovary.....		3	3	2	1				3
<i>Carried forward</i>	970	932	1902		794	869	37	129	73	1902

SURGICAL OPERATIONS, 1900 — *Continued.*

ANNUAL REPORT (EIGHTY-THIRD)

OF THE

SUPERINTENDENT OF THE MCLEAN HOSPITAL.

The following report, with tabular statements relating to the number and condition of the patients treated in the Hospital during the year 1900, is respectfully presented :—

TABLE No. 1.
GENERAL STATISTICS OF THE YEAR.

	Males.	Females.	Total.
Patients in the Hospital Jan. 1, 1900	74	85	159
Admissions within the year	81	88	169
Whole number of <i>cases</i> within the year	155	173	328
Discharged within the year	73	82	155
Namely — as Recovered	16	21	37
Much improved	13	17	30
Improved	11	17	28
Unimproved	10	18	28
Not insane	8	1	9
Deaths	15	8	23
Patients remaining Dec. 31, 1900, } supported as private patients	82	91	173
Number of different <i>persons</i> within the year	151	170	321
“ “ “ “ admitted	78	87	165
“ “ “ “ recovered	15	21	36
Daily average number of patients	81.05	83.54	164.59

During the year three men and one woman were twice admitted, and one man and two women were

VIEW LOOKING WEST.

APPLETON HOUSE.

PROPERTY OF THE
LIBRARY OF THE
UNIVERSITY OF CHICAGO

discharged and re-admitted. Thus the 328 cases treated represented 321 persons.

Of the 165 persons admitted during the year, 105 were regarded as recent cases, and 60 as chronic, or incurable.

There were 117 persons, 55 men and 62 women, who had never been in any hospital. Of the remaining 48 persons, 28, 14 men and 14 women, were admitted for the second time; 11, 5 men and 6 women, for the third time; 3, 1 man and 2 women, for the fourth time; 3, 1 man and 2 women, for the fifth time; 1 man for the sixth time; 1 man for the seventh time; and 1 woman for the eighth time.

In 1900 there were 34 more admissions, 23 more discharges, and 37 more cases under treatment than during the year 1899, and the number present was 14 more at the end than at the beginning of the year.

Of the 153 persons discharged, including deaths, 15, 5 men and 10 women, were transferred or committed to other hospitals in this State, and 2 men and 1 woman to hospitals in other States.

Of the 36 persons discharged recovered, 28 had never before been inmates of any hospital; and the remaining 8 persons had been in this and other hospitals. These 8 persons had previously made 19 recoveries.

The average duration of illness from the beginning of attack in 36 cases recovered was 10.97 months, and the average duration of their residence in the hospital was 7.9 months.

The percentage of recoveries on all admissions, for the year 1900, was 21.9; these admissions include 12 cases "not insane."

The voluntary cases admitted during the year numbered 84, 41 men and 43 women. Of these, 37 were

cases of depressive-maniacal insanity, 13 of dementia præcox, 4 of general paralysis, 3 of involution psychosis, 3 of senile dementia, 2 of neurasthenia, 2 of primary delusional insanity, 2 of alcoholism, and 1 each of toxic insanity and psychopathic inferiority. Twelve were not insane and in 4 cases no diagnosis was made.

The 84 voluntary cases admitted during the year with 38 such cases remaining from previous years, furnished 15 recoveries. The voluntary patients have yielded 17.98 per cent. of recoveries on the admissions of that class for 1900, thus furnishing less than their due proportion of all the recoveries. Of this class, 12 other cases were discharged much improved, 11 improved, 14 not improved, 9 not insane, 5 dead, and 3 were committed. The total remaining under the voluntary relation at the end of the year is 53 persons, 23 men and 30 women.

The number of cases admitted as voluntary patients under the present law is as follows: namely, 1881, 1; 1882, 11; 1883, 33; 1884, 49; 1885, 34; 1886, 29; 1887, 29; 1888, 34; 1889, 41; 1890, 58; 1891, 40; 1892, 52; 1893, 46; 1894, 40; 1895, 39; 1896, 48; 1897, 61; 1898, 61; 1899, 60; 1900, 84; — a total of 850 cases in 20 years.

The voluntary cases were one-half of all admissions. Three of these were regularly committed after admission to the Hospital — 2 because the cases were not proper ones to remain on the voluntary basis, and 1 because of her demand for discharge.

The fifth year's work in the New Hospital at Waverley presents the remarkable result of a number of admissions, 169, exceeding the daily average for the year, and the rated "capacity" of the Hospital, which

is 160. This implies an unusually active movement of the population which made it possible to deal with so many cases, with the limit of the Hospital's capacity being practically reached. Consistent with these facts also was the large number of 328 cases treated during the year. Only twice before in the history of the Hospital was the number of admissions exceeded: 170 in 1847, and 173 in 1850. Those were then exceptional years in this regard, and at that time there were more than 200 available beds, being more than 40 in excess of the present capacity. The large number of 105 admissions for the year being regarded as recent cases, and many of the other 60 cases, called chronic, being in conditions requiring active medical treatment, it is evident that the Hospital is doing an increasing amount of service for those who are suffering from mental diseases. These facts are amply justifying the providing of the Hospital with the excellent conditions which it has for its work ; they justify also a strong appeal for more room for patients. The development of the plan and purpose of the New Hospital has now reached a stage which permits an extension of its benefits. Some parts of the Hospital are now overcrowded, and the proper remedy for this by providing more room would also improve the classification. Our greatest present need in this regard is a new building for about 30 women.

Other striking results are apparent in the statistics of the last year; the proportion of voluntary patients was notably increased, being one-half of the whole number of admissions. It is also significant that as many as 12 are reported as not insane. About one-third of the patients, as a rule, heretofore, have

been on the voluntary basis. Noteworthy also is the fact that a considerable number of patients in conditions of active senile insanity are being confided to the care of the Hospital where the facilities for treatment are better than can be had at their homes. It is not uncommon that distressing and apparently hopeless cases are relieved and restored to their homes in comparative comfort. The practice of bringing patients here for first care and observation is continuing in an increasing degree. These practical results are proving, in many ways, that the function of such an institution includes a wider range of cases than those which can be regarded strictly as "acute and curable."

The summary just given of the year's work, as presented by the statistics, indicates not only its unusual results, but the interesting relation between these and what was done to produce them. Besides the diligent attentions of the nurses to the patients, the various methods for providing entertainment, exercise, and occupation have been maintained. The functions of the gymnasium, both for men and women, include these and other uses. The special work of the instructors in gymnastics shows the value of giving systematic attention to these matters, which include not only the teaching of nursing in the medical application of physical exercise, but the promotion of interest in all available forms of out-door sports and games, as well as in-door recreation and employment. At the annual exhibition last June there was an interesting display of the shop-work of the men, and of the drawings and paintings and embroidery done by the women. Associated with these uses of the gymnasiums the hydrotherapeutic work of the

bath rooms has been systematically carried on with evident benefit.

The special clinical studies, as heretofore described, have been pursued with great interest and satisfaction. The notable event of the year was the further development of the clinical-pathological laboratory upon the plan begun eleven years ago. During the last ten years studies in pathological chemistry have been followed to some extent, with occasional publications of work done. This special department was provided for in the planning of the new Hospital, by the arrangement of the rooms for the laboratory. The time of new construction and removal of the Hospital was not favorable for developing the contemplated methods of investigation to be coördinated with the advancement of the clinical work; and other obstacles have stood in the way of gaining the efficiency of organization that has been desired. This subject has been repeatedly presented in these reports. Now the long cherished purpose has been so far attained that Dr. Otto Folin was appointed in July to conduct this department of the laboratory.

Dr. Folin graduated at the University of Minnesota, with the degree of B. S., in 1892; he took the degree of Ph. D. at the University of Chicago, in 1896, under Professors Nef and Stieglitz. He afterwards spent two years in European universities as a student of physiological chemistry, at Upsala, Berlin, and Marburg, as a pupil of Hammarsten, Sal-kowski, and Kossel. His subsequent studies have been especially directed to pathological chemistry, and during the last year he has had charge of the department of physiological and analytical chemistry in the University of West Virginia, where he also pur-

sued some special investigations. He entered upon his duties here in October; the laboratory has been refitted, and its equipment is sufficiently near completion, so that the work has fairly begun. The original purpose can now be carried on by investigations in pathological physiology and chemistry in constant and practical relation with the problems that present themselves in the clinical observation and treatment of the patients.

Appointments of Junior Assistant Physicians for a year's service from September first, were made as follows:

Harry W. Miller, M. D., to the laboratory department for a third year's service, but he subsequently resigned to accept an appointment as Pathologist at the Taunton Insane Hospital; Guy G. Fernald, M. D., for his second year in the clinical department; and Martin J. Cooley, M. D., for his first year in the same department. Mr. Phil A. Shaffer, A. B., of the University of West Virginia, coming with Dr. Folin, as his assistant, will continue here some research work upon which he has been engaged.

The Samuel Eliot Memorial Chapel, for which the fund now amounts to something more than \$30,000, is held in expectation, by all who look forward to the enjoyment of its benefits, with increasing interest. It is hoped that, if possible, it may be built during the coming year.

Information in regard to the Training School for Nurses will be found in a special report, with an accompanying statement of the course of training, etc., in the appendix to this report.

The general results of the past year have been very encouraging, not only with respect to the

substantial advancement of our plans for perfecting the medical work, but the increasing amount of work accomplished in service rendered to patients, and the public, where the need of it exists, is a sure indication that we have here the opportunity for doing a larger work with a moderate addition to the facilities for it. The steady improvement in the business affairs of the Hospital amounts to a demonstration that a little enlargement of its earning capacity would ease the stress of our labors, and make the institution self-supporting. The conditions are also being attained here that invite the consideration of those who would be interested in aiding scientific investigation for promoting progress in the care and treatment of insanity.

Very respectfully,

EDWARD COWLES,

Medical Superintendent.

EIGHTEENTH ANNUAL REPORT

OF THE

MCLEAN HOSPITAL TRAINING SCHOOL FOR NURSES.

The Training School for Nurses, with the completion of the nineteen years of its existence, has a roll of graduates including 383 names — 250 women and 133 men. In the following summary it is shown how many remain in the work of nursing, and into what positions in life others have gone.

	<i>Men.</i>	<i>Women.</i>
Number of graduates in sixteen years	133	250
Graduates remaining in the service as nurses	16	19
Graduates remaining in the service as officers	2	4
Pupils in Massachusetts General Hospital Training School .		5
Previously graduated at Massachusetts General Hospital Training School		72
Superintendents of hospitals		2
Superintendents of nurses, other hospitals	4	7
Employed in other institutions	7	6
Engaged in private nursing	26	108
Medical students	15	1
Physicians	16	1
Dental students	1	
Dentists	4	
Clergyman	1	
Students	4	
In other business	19	3
At home	9	21
Married and left the profession		64
Deceased	9	9
Pupils now in this school	32	41

This table shows that of the 383 graduates of the School in nineteen years, 55 men still continue in the

work either in hospitals or in private nursing, besides 36 who are either physicians, medical students, or dentists. The women who continue in the profession of nursing number 151, of whom 23 are in this Hospital and 20 in the other institutions ; official positions are held by 19 in connection with training schools. Those who are married, 64, the 21 at home and likely to resume professional work, and 3 in medicine, are all in positions which give them opportunity to apply the knowledge gained in their training.

The courses of instruction in the School have been continued without material change except that such improvements are made in the methods of teaching as are indicated by the requirements of the work and are suggested by experience in it. This refers especially at present to the system of hydrotherapeutics which was put in operation two years ago. The nurses now receive methodical instruction in the application of this method of treatment by means which may be used in private nursing, when the special apparatus of a hospital bath-house cannot be employed; this includes instruction in giving hot and cold baths and affusions, the use of wet and dry packs and the drip-sheet, etc. Practice in these means of treatment, combined with some forms of medical gymnastics, the application of massage, etc., improves the qualifications of the nurse for the service which is now likely to be required in attendance upon private patients. The arrangement is continued, with excellent results, by which graduates of this School have the privilege of entering that of the Massachusetts General Hospital for an additional year of instruction and graduate there. The same privilege is granted to graduates of that School.

Information is given in the following pages to those who wish to become applicants for admission to the School; its work is described by a statement of the course of instruction, the general order of exercises, and the subjects of the lectures.

EDWARD COWLES,
Medical Superintendent.

MCLEAN HOSPITAL TRAINING SCHOOL FOR NURSES, WAVERLEY, MASS.

The Trustees of the Massachusetts General Hospital Corporation, having established at the McLean Hospital a School for Nurses, offer to give to men and women desirous of becoming professional nurses a two years' course of training in general nursing, with special reference to the care of cases of nervous and mental disease. The Training School is conducted by the Superintendent of the Hospital, under the authority of the Board of Trustees.

Those wishing to receive such a course of instruction must write to the Superintendent of the McLean Hospital, Waverley, Mass., giving a brief personal history and also the names and addresses of three responsible persons who know of their good character and capabilities. If it is then thought advisable for such prospective candidates to make a formal application, blank forms especially provided for this purpose will be sent to them.

Candidates must be in sound health, and must send with their application a certificate from a physician certifying to the fact. The most desirable age is from twenty-one to thirty-five years.

Upon the recommendation of the Superintendent of the Hospital and the approval of the Trustees, they will be received for two months on probation, at the expiration of which time they will, if accepted, sign an agreement to complete the prescribed course of two years.

The nurses are subject to the rules of the Hospital. Their fitness for the work and the propriety of retaining or dismissing them at the end of the two months of trial are determined by the authorities in charge of the School, under the direction of the Trustees.

At the end of the first six months the record of each pupil is again carefully scrutinized and the right is reserved to terminate then, or at any other time, the connection of any pupil or nurse with the School and Hospital for inefficiency, misconduct, generally unsatisfactory record, or for any other reason which may be deemed sufficient.

All nurses are required to be sober, honest, truthful, trustworthy, punctual, quiet, orderly, cleanly, neat, patient, kind, and cheerful.

Instruction is given by the officers of the Hospital. The course includes the general care of the sick; the managing of helpless patients in bed, in moving, changing bed and body linen, making of beds, etc.; giving baths, keeping patients warm or cool, preventing and dressing bed sores; bandaging, applying of fomentations, poultices, and minor dressings; the preparing and serving of food, the feeding of helpless patients and those who refuse food; the administering of enemas and use of the catheter; attendance upon patients requiring diversion and companionship; the observation of mental symptoms, delusions, hallucinations, delirium, stupor, etc.; and the care of excited, violent, and suicidal patients.

They are also given instruction in the best practical methods of supplying fresh air, and of warming and ventilating sick-rooms in a proper manner, and are taught to take proper care of rooms and wards, to

keep all utensils perfectly clean and disinfected, etc.; to observe the sick accurately in regard to the state of secretions, pulse, breathing, skin, temperature, sleep, appetite, effect of diet, of stimulants, and medicine; the giving of massage, and the managing of convalescents.

Instruction is also given in the modern methods of physical training, by the use of free movements and the usual apparatus, in a gymnasium provided for the patients. The nurses assist in the medical application of physical exercise. Each nurse is required to have a gymnasium costume, the material for which will be furnished, at moderate cost, by the Hospital.

The nurses receive practical instruction in Hydrotherapy, in the application of baths, by the use of the hot-air cabinet, douche and shower baths, affusions, etc.; also the use of the drip sheet, wet pack, the sitz and half bath, and the application of compresses.

Written examinations take place at the middle and end of each school year, and pupils must attain on critical marking at least sixty per cent.

Instruction by text books and lectures is given for eight months of the year, from October 1 to May 31, but accepted candidates enter the School whenever vacancies occur. They are usually taken in the order of acceptance, though some can anticipate this time and enter with less delay, if they are so situated as to be able to have their names placed on the emergency list. It is no disadvantage to enter the School between May and October, as the pupil gets some practical knowledge of the care of patients before taking up the study required by recitations and lectures.

There is no fixed date for graduation. On com-

pletion of the full term of two years, nurses who have passed all the required examinations receive diplomas certifying to their period of training, their proficiency, and good character.

The pupils reside in the Hospital and are employed as assistant nurses in its wards. The men are paid twenty dollars (\$20) per month during the first year and twenty-three dollars (\$23) per month during the second year. The women are paid twelve dollars (\$12) per month during the first year and fifteen dollars (\$15) per month during the second year. Their education during this time is a valuable addition to the compensation for their services.

Most graduates engage in private nursing or accept positions of trust in other institutions. Some are invited and prefer to remain in the service of this Hospital. Men graduates of this School are paid twenty-seven dollars (\$27) per month during the first year and thirty dollars (\$30) per month thereafter. Women graduates of this School are paid twenty-five dollars (\$25) per month during the first year and thirty dollars (\$30) per month thereafter. Graduates of this School, who are also graduates of the Training School for Nurses at the Massachusetts General Hospital in Boston, are paid thirty-five dollars (\$35) per month.

The women probationers while on duty are expected to dress plainly and neatly in a cotton gown, and are permitted to wear, of the regular uniform, only the cap and apron. The men wear ordinary plain clothing. After formally joining the School, at the end of the period of probation, both men and women are required to wear the Hospital uniform at all times while on duty in the wards.

Women graduates of this School who wish to have additional practical experience and instruction in general nursing, have the privilege, under certain restrictions, of entering the Training School for Nurses at the Massachusetts General Hospital in Boston. Such graduates will, after one year's satisfactory study, receive the diploma from that School, in addition to the diploma received from the McLean Hospital Training School.

COURSE OF INSTRUCTION.

Junior Year:

- | | |
|--|--------------------|
| Physiology and Hygiene (to the Nervous System) | <i>Hutchison.</i> |
| Fever-Nursing | <i>Wilson.</i> |
| A Text-Book of Nursing | <i>Weeks-Shaw.</i> |

ORDER OF EXERCISES.

Monday.

MEN.

- 4.00 P. M. Junior Class, Recitation.
6.30 P. M. Junior Class (Div. of eight), Massage.

Tuesday.

- 4.00 P. M. Senior Class, Lecture.

Wednesday.

- 4.00 P. M. Junior Class, Lecture.
6.30 P. M. Junior Class (Div. of eight), Massage.

Thursday.

- 4.00 P. M. Senior Class, Recitation.
6.00 P. M. Junior Class (Div. of six, eight lessons), Bandaging.

Friday.

- 11 00 A. M. Junior Class (in Divisions of six, from February 3), Care of Sick Patients in Bed, Poulticing, etc.
3.00 P. M. Junior Class (Div. of eight), Instruction in Cookery.
4.00 P. M. Mixed Class, Lecture.

Saturday.

- 4.00 P. M. Junior Class (Div. of six, eight lessons), Bandaging.

Monday.

WOMEN.

- 9.00 A. M. Junior Class, in Divisions of two for one month each (every morning in the week), Instruction in Cookery.
4.00 P. M. Senior Class, Recitation.
7.00 P. M. Junior Class (1st Div.), Recitation.
8.00 P. M. Mixed Class, Instruction in Physical Training.

Tuesday.

- 11.00 A. M. Senior Class, Recitation.
4.00 P. M. Senior Class, Lecture.

Wednesday.

- 11.00 A. M. Junior Class (2d Div.), Recitation.
4.00 P. M. Junior Class (Div. of six), Massage.

Thursday.

- 11.00 A. M. Head Nurses, Review, etc.
4.00 P. M. Mixed Class, Instruction in Physical Training.

Friday.

- 4.00 P. M. Junior Class, Lecture.

Saturday.

- 4.00 P. M. Junior Class (Div. of six), Massage.
4.00 P. M. Junior Class (Div. of six), Poulticing, Bandaging, Drugs, etc.

SUBJECTS OF LECTURES.

JUNIOR YEAR.

- TWO. — The skeleton: skull, thorax, pelvis, and spinal column, general anatomy and physiology; a consideration of the more common injuries to which they are liable.
- THREE. — Surgical landmarks: prominent points of the skeleton [demonstration on a subject]. Fracture and repair of bones. The joints; sprains, dislocations, etc.
- ONE. — The muscles: general anatomy and physiology. Paralysis, rigor mortis, etc.
- THREE. — The blood: its function, coagulation, etc. The heart and blood-vessels. The pulse: information to be gained from it; causes of variation in rate, strength, etc. Diseases of the circulatory system.
- TWO. — Hæmorrhage: varieties — epistaxis, hæmoptysis, from various parts of the alimentary canal, post partum, apoplexy, etc. Symptoms of serious hæmorrhage; various means of stopping it. Demonstration on a subject of location of blood vessels and methods of applying pressure.

Eighty-Seventh Annual Report

OF THE

TRUSTEES

OF THE

Massachusetts General Hospital.

Including the General Hospital in Boston,
the McLean Hospital and the
Convalescent Home in
Waverley.

1900.

BOSTON:
THE BARTA PRESS.

1901.

The Dalton Scholarship with an income of Five Hundred Dollars will be awarded not later than June 15, for the year beginning Sept. 15, 1901, to the candidate recommended by the Visiting Staff of the Massachusetts General Hospital and confirmed by the Trustees.

The holder of the Scholarship is required to do original work in a subject to be designated.

For particulars, apply to the Resident Physician,

MASSACHUSETTS GENERAL HOSPITAL,

Blossom Street, Boston.
